2. Installation

If you need help installing WordPress, follow the instructions in WordPress Codex or you can watch theInstructional Video created by Woo Themes. Below are all the useful links for WordPress information.

1. **Download** the **Houzez** files from your **ThemeForest** account. Navigate to your **Downloads tab** on ThemeForest and find Houzez. Click the **Download** button.
2. On your local computer **extract the ZIP folder downloaded from ThemeForest**. After extracting files you will open the folder called "Houzez_Main_v1.x" where you will find more folders (child-theme, documentation, licensing)
3. Locate the **houzez_v1.x.zip** in the Houzez_Main_v1.x folder. This is the theme you have to install.

Note: If you are installing your theme from the WordPress theme installer, but get a message that says**"Are you sure you want to do this?"**, most likely your web server is configured with PHP settings that are too low to allow the theme ZIP file to upload.

Specifically, PHP is configured to a maximum file upload size limit at 8 megabytes or less. **The theme**

ZIP is currently about 34 megabytes in size which is mainly due to the included plugins and all the demo content. Thus, the web server is rejecting the upload. WordPress is giving you a rather ambiguous message in response. This is not a theme fault or bug.

There two ways to solve this problem

1. You can either get your web host to **increase your PHP limits**.
2. You can **upload your theme via an FTP client**.

Recommended PHP configuration limits are as follows:

- max_execution_time 60
- memory_limit 128M
- post_max_size 48M
- upload_max_filesize 48M

Install via FTP

Step by step: How to install Houzez via FTP

- Step 1 – Log into your FTP client to access your host web server
- Step 2 – Browse to find the **houzez_v1.x.zip** file on your computer (located in downloader folder from ThemeForest) and unzip it.
- Step 3 – Upload the folder you extracted from the zip file to yourdomain/wp-content/themes/ folder
- Step 4 – Activate the newly installed theme by going to WordPress > Appearance > Themes and clicking the Activate button.
- Step 5 – After you activate **Houzez** you will see a notification message to activate the required plugins in the Plugins section of your dashboard. Visual Composer plugin is required.
- Step 6 – Click on Install Button on each plugin to start installing them. After you’ve installed them, Activate them.

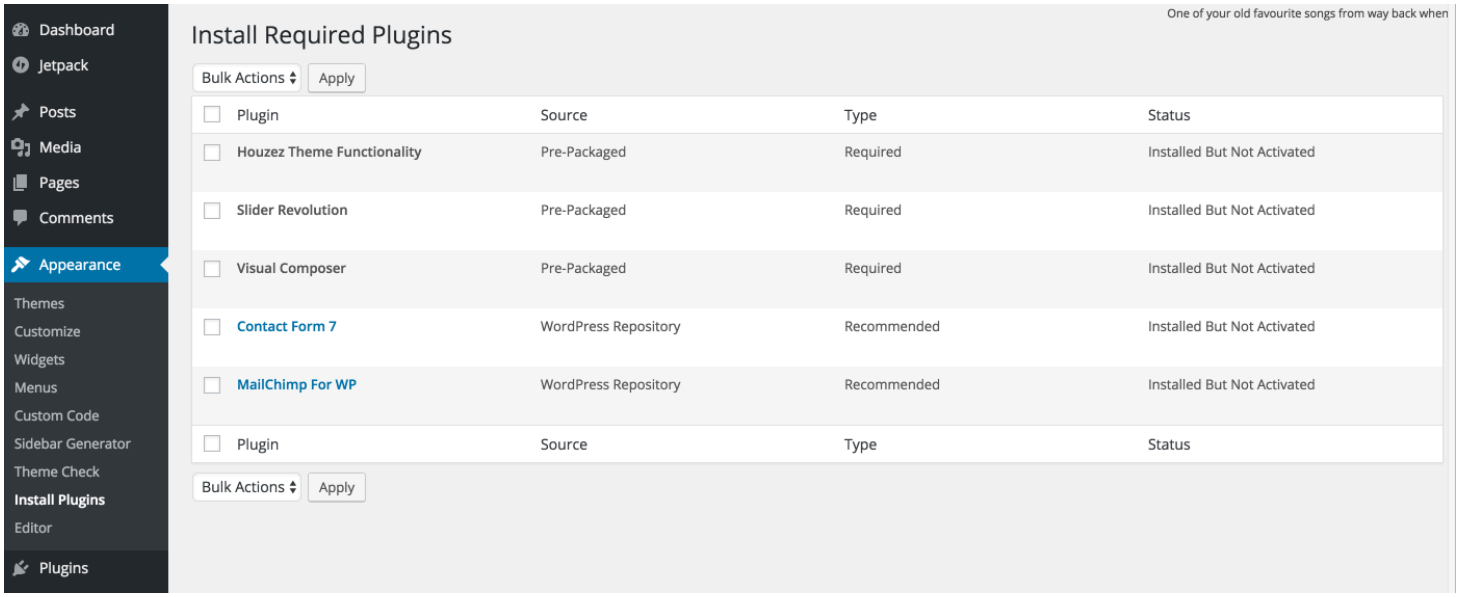
Install via WordPress

Step by step: How to install Houzez via WordPress admin panel

- Step 1 – Navigate to Appearance > Themes
- Step 2 – Click Add New and click the Upload button.
- Step 3 – Browse to find the **Houzez.zip** file on your computer and click Install Now
- Step 4 – Activate the newly installed theme by going to Appearance > Themes and clicking the Activate button.
- Step 5 – After you activate Houzez you will see a notification message to activate the required plugins in the Plugins section of your dashboard. Visual Composer plugin is required.
- Step 6 – Click on Install Button on each plugin to start installing them. After you’ve installed them, Activate them.

Plugin Installation

Houzez includes 3 plugins that will need to be installed and activated: **Houzez Theme - Functionality, Slider Revolution and Visual Composer**. When you install Houzez, you will get a notification message in your WordPress admin telling you of the required and recommended plugins.



Required plugins:

1. **Houzez Theme - Functionality**: This is our own plugin that is required to use Houzez properly. Please make sure this is always installed and activated.
2. **Slider Revolution**: This is a premium slider plugin created by ThemePunch.
3. **Visual Composer**: This is a premium slider plugin created by WpBakery.

Recommended plugins:

1. **Contact Form 7**: This plugin can manage multiple contact forms, plus you can customize the form and the mail contents flexibly with simple markup.
2. **Mailchimp for WP**: This plugin add sign-up methods for your MailChimp lists to your WordPress site.

Plugin Installation & Update Notification

When you install Houzez or update Houzez, you will receive a WordPress notification message letting you know to install or update the required and recommended plugins. Please follow the on screen prompts to install, activate or update.

Note: All plugin updates are provided with theme updates.

3. Installation - Install via FTP

Step by step: How to install Houzez via FTP

- Step 1 – Log into your FTP client to access your host web server
- Step 2 – Browse to find the **houzez_v1.x.zip** file on your computer (located in downloader folder from ThemeForest) and unzip it.
- Step 3 – Upload the folder you extracted from the zip file to yourdomain/wp-content/themes/ folder
- Step 4 – Activate the newly installed theme by going to WordPress > Appearance > Themes and clicking the Activate button.
- Step 5 – After you activate **Houzez** you will see a notification message to activate the required plugins in the Plugins section of your dashboard. Visual Composer plugin is required.
- Step 6 – Click on Install Button on each plugin to start installing them. After you’ve installed them, Activate them.

4. Installation - Install via WordPress

Step by step: How to install Houzez via WordPress admin panel

- Step 1 – Navigate to Appearance > Themes
- Step 2 – Click Add New and click the Upload button.
- Step 3 – Browse to find the **Houzez.zip** file on your computer and click Install Now
- Step 4 – Activate the newly installed theme by going to Appearance > Themes and clicking the Activate button.
- Step 5 – After you activate Houzez you will see a notification message to activate the required plugins in the Plugins section of your dashboard. Visual Composer plugin is required.
- Step 6 – Click on Install Button on each plugin to start installing them. After you’ve installed them, Activate them.

5. Installation - Plugin Installation

Houzez includes all plugins that will need to be installed and activated: **Houzez Theme - Functionality, Houzez Login Register, Slider Revolution and Visual Composer**. When you install Houzez, you will get a notification message in your WordPress admin telling you of the required and recommended plugins.

Required plugins:

1. **Houzez Theme - Functionality**: This is our own plugin that is required to use Houzez properly. Please make sure this is always installed and activated.
2. **Houzez Login Register:** Adds login register functionality for houzez theme
3. **Slider Revolution**: This is a premium slider plugin created by ThemePunch.
4. **Visual Composer**: This is a premium slider plugin created by WpBakery.

Recommended plugins:

1. **Contact Form 7**: This plugin can manage multiple contact forms, plus you can customize the form and the mail contents flexibly with simple markup.
2. **Mailchimp for WP**: This plugin add sign-up methods for your MailChimp lists to your WordPress site.

Plugin Installation & Update Notification

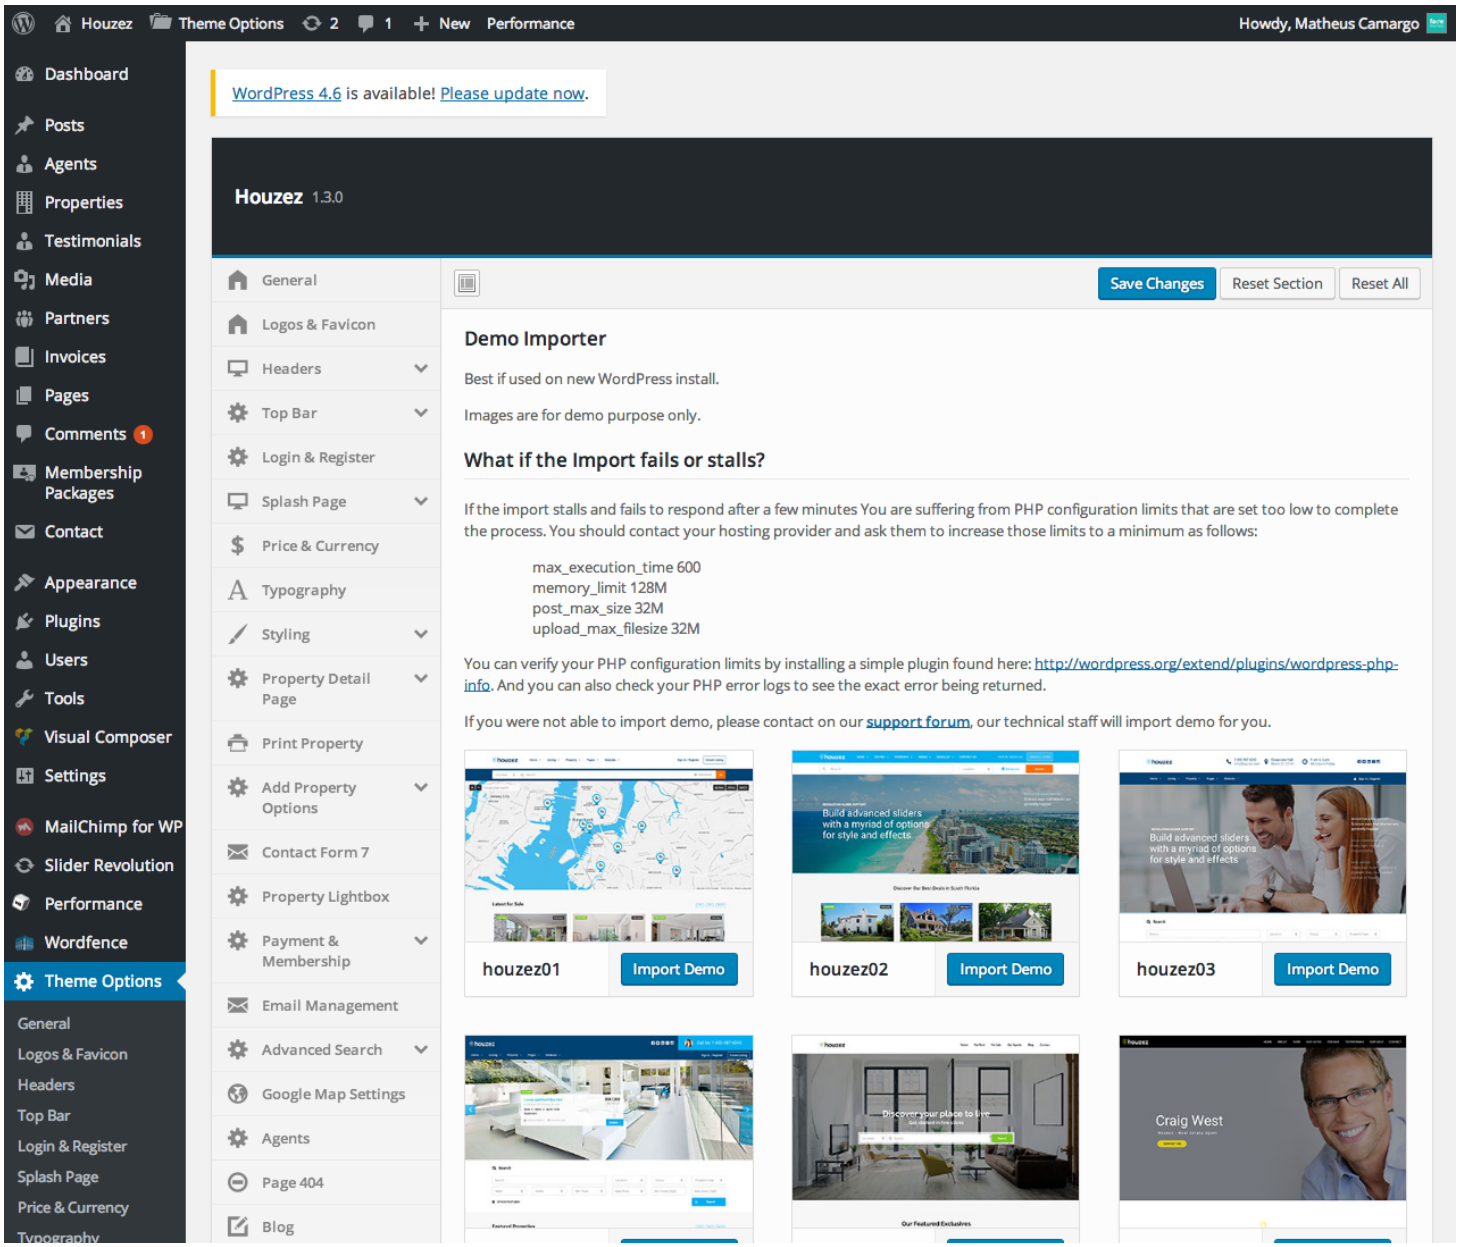
When you install Houzez or update Houzez, you will receive a WordPress notification message letting you know to install or update the required and recommended plugins. Please follow the on screen prompts to install, activate or update.

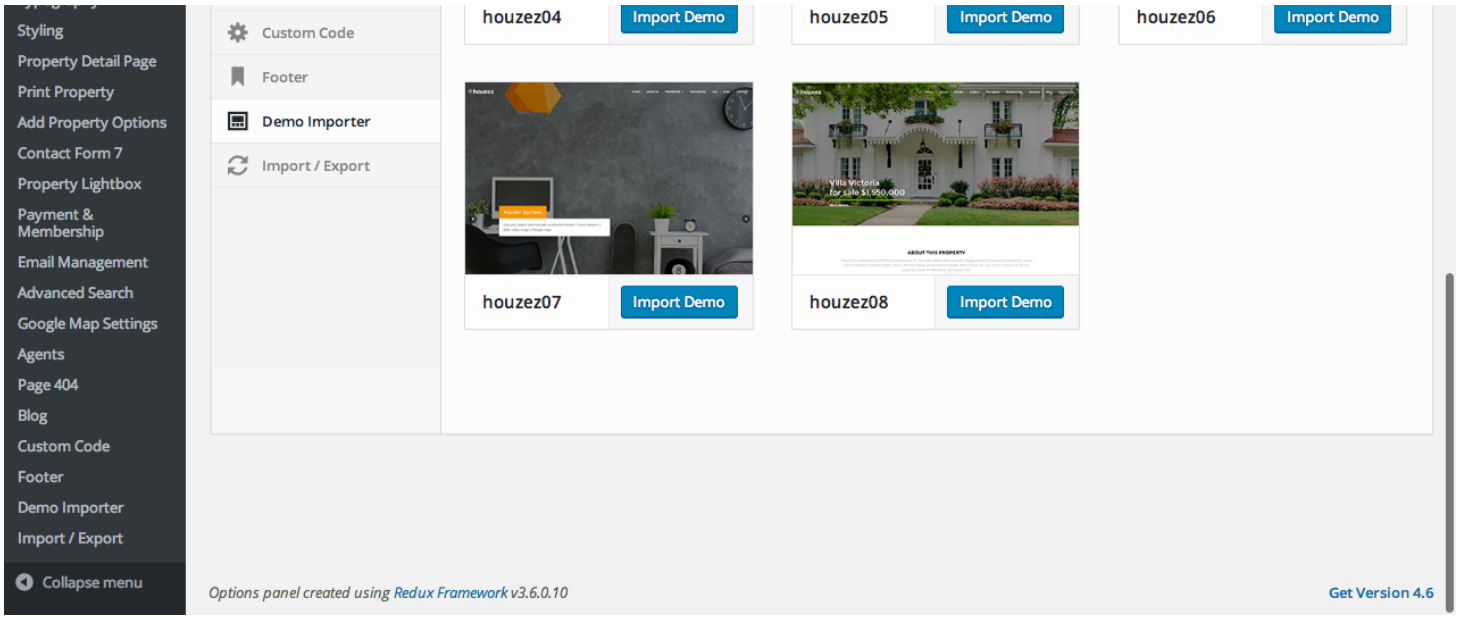
Note: All plugin updates are provided with theme updates.

6. Installation - How to import demo content

Houzez comes with the One Click Import feature so easily start with content in the right way. To install demo content proceed as follow.

1. Navigate to **Theme Options > Demo Importer**
2. Select the demo you want to install by clicking on **Import Demo**





Recommended PHP configuration limits are as follows:

- max_execution_time 180
- memory_limit 128M
- post_max_size 48M
- upload_max_filesize 48M
- minimum PHP version 5.6 required

Note: Is possible the demo import process won't work on some server due to the memory limit. **If you were not able to import demo, please contact on our support forum, our technical staff will import demo for you**.

7. Installation - How to update Houzez

Note: Your content will not be lost but note that if you have modifications on the theme code they will be lost. You have to reapply them after the update is over.
There are three ways to update theme

Best Practice

- Always check our update notes
- Always backup the files and the database, in case something goes wrong with the server you could use the backup to revert to the previous state. For more information on how to backup check the official documentation.
- Do not keep older copies of the theme inside wordpress themes folder
- Reset the cache after you update

1. Update theme via FTP

1. Place your site in maintenance mode, for this you could use a plugin (ex. Ultimate Maintenance Mode, WP Maintenance Mode, … etc.)
2. Go to **“yoursite/wp-content/themes”** folder location and backup your Houzez theme folder by saving it to your computer, or you can choose to simply delete it. Your content will not be lost but note that if you have modifications on the theme code they will be lost. You have to reapply them after the update is over.
3. Connect to your FTP account using Filezilla.
4. Inside Filezilla navigate to the wordpress theme directory **“yoursite/wp-content/themes”**.
5. Retrieve the **Houzez.zip** file from your recently ThemeForest **download and extract** the file to get the updated Houzez theme folder.
6. Drag and drop the new Houzez theme folder into **“yoursite/wp-content/themes”** and overwrite the existing files.

2. Update the theme automatically

1. **Download the envato wordpress toolkit** from here: https://github.com/envato/envato-wordpress-toolkit
2. **Upload and activate** the envato wordpress toolkit plugin (.zip file that you downloaded).
3. Get your **new api key**
4. Go to **Envato Toolkit Menu** and **add** your **Themeforest Username** and the **API Key** that you generated from your account in the required fields. **Save** your settings. If you have problems with the update check Skip Theme Backup checkbox.
5. Update the theme.
6. Choose **Activate the theme**.

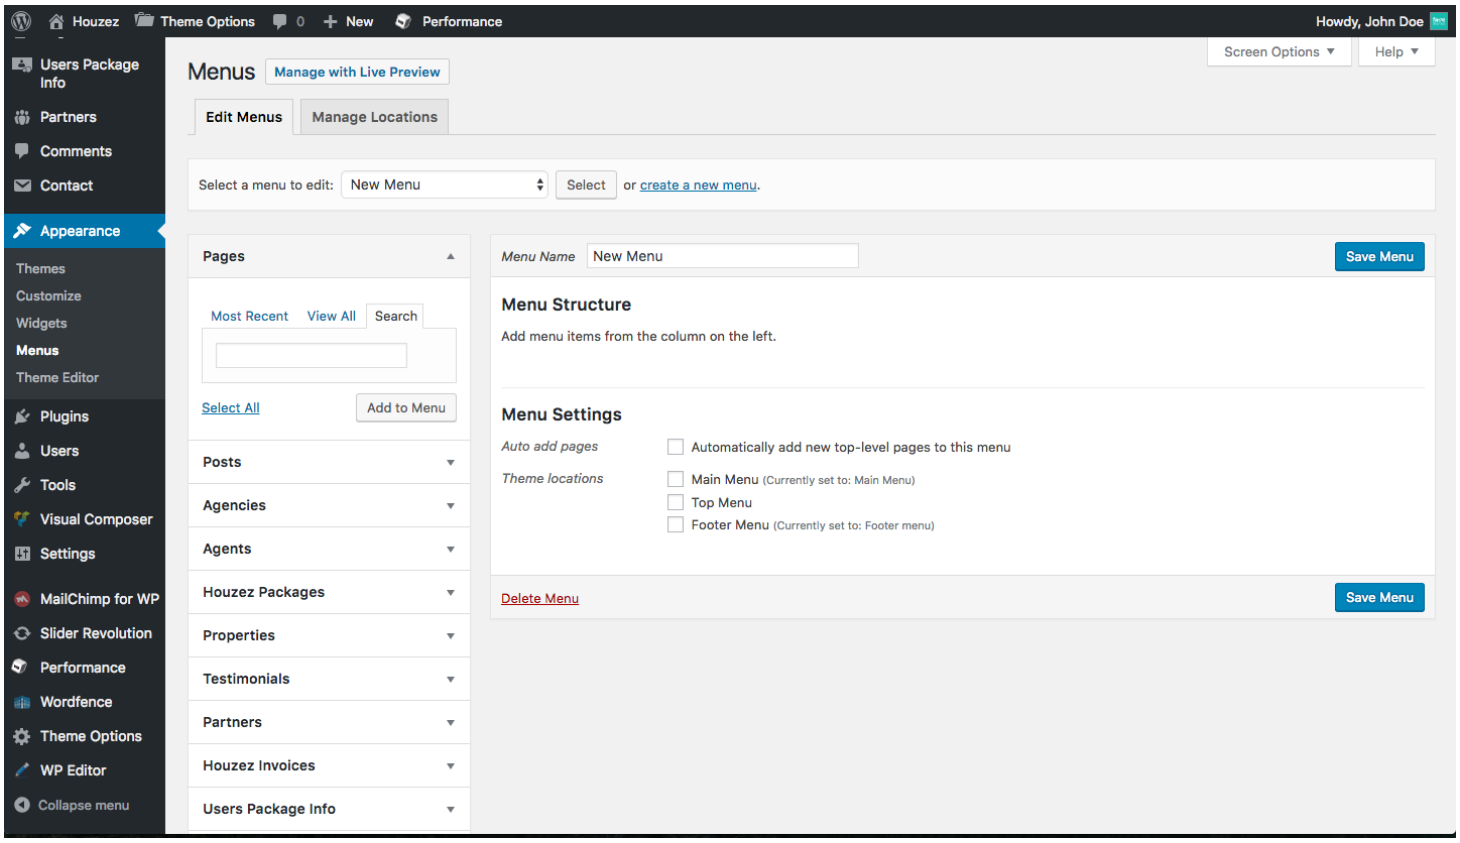
3. Update the theme via WordPress

1. Deactivate the current Houzez theme from the **Appearance > Themes section** by activating a different theme. Once you activate a different theme, delete the Houzez theme. Don’t worry, your content will not be lost.
2. Get the “**Houzez.zip**” file from your new Themeforest download (Installable WordPress file only). If you downloaded the “All Files & Documentation” from Themeforest, then you need to unzip the archive file you received, the Houzez.zip will be inside it.
3. Go to **Appearance > Themes**, choose **Add New Theme**, **Upload** the Houzez.zip” and click on the “**Install Now**” button.
4. After your upload is finished choose **Activate the theme**.

8. Menu - How to Crete a New Menu

Houzez supports custom WordPress menus, with multiple levels of dropdown support for the main menu. There are 3 areas of the theme where you can assign a menu; Main Menu, Top Menu and Footer Menu theme locations.

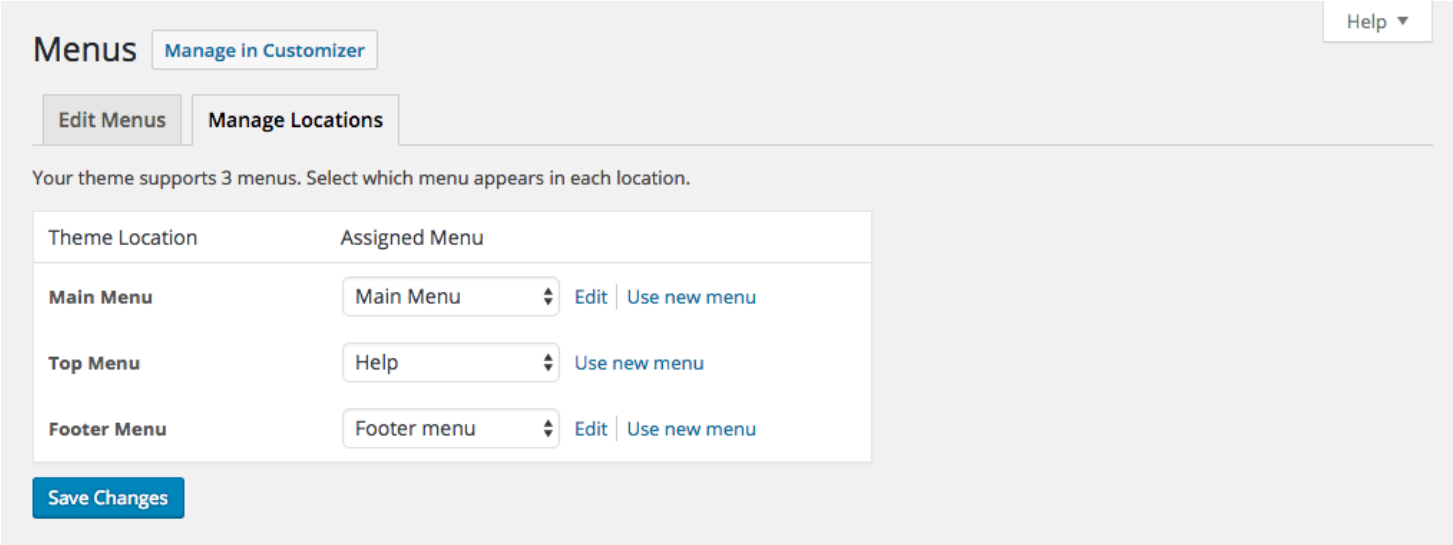
Each of these menu locations can have a custom menu assigned. Once a menu is created and assigned to the location, it will show up on the site.



1. Navigate to **Apparence > Menus** section of your admin sidebar.
2. Click the **Create A New Menu** link to make a new menu. Enter the name then click the **Create Menu button**
3. To add a menu item, select one of your created pages on the left hand side and click the **Add to Menu** button. You can also add all kinds of different posts from the left side.

4. To add a custom menu item, enter a custom name and link into the **Links** box.
5. Manage your menus by using the drag and drop functionality. To create a dropdown menu, simply drag a menu item below and slightly to the right of another menu item, and it will lock into place and create a dropdown section
6. After setting up your menu, scroll down to the bottom of the page (**Menu Settings)** to assign the menu to one of the 3 locations in the **Theme Locations** box (Main Menu, Top Menu or Footer Menu). You can also choose to add automatically new top-level pages to this menu.
7. Once its all done, make sure you click the **Save Menu** button.

9. Menu - How to assing a menu to theme location



1. Navigate to **Apparence > Menus**
2. Click on tab **Manage Locations**
3. **Main Menu:** This is the Main Menu that shows in the Header area.
4. **Top Menu:** This is the menu you can display in the Top Bar
5. **Footer Menu:** This is the Footer Menu that shows in the Footer area.
6. **Save changes**

10. Properties - Create a New Property

Properties are the most important sections of your website, and most likely you will setup several of them. There are different property options to choose from, each serving a purpose to help you build a finished site.

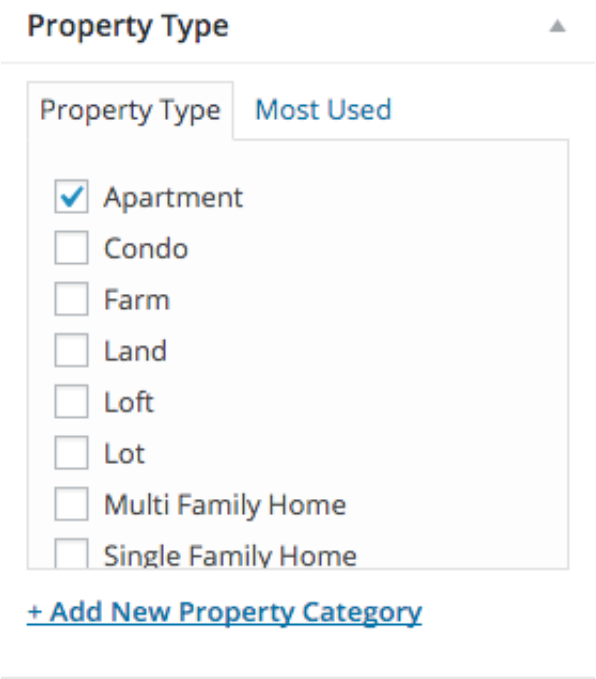
You can create any number of properties with content. In this section we are going to see how to create a full detailed property page.

How to create a new property

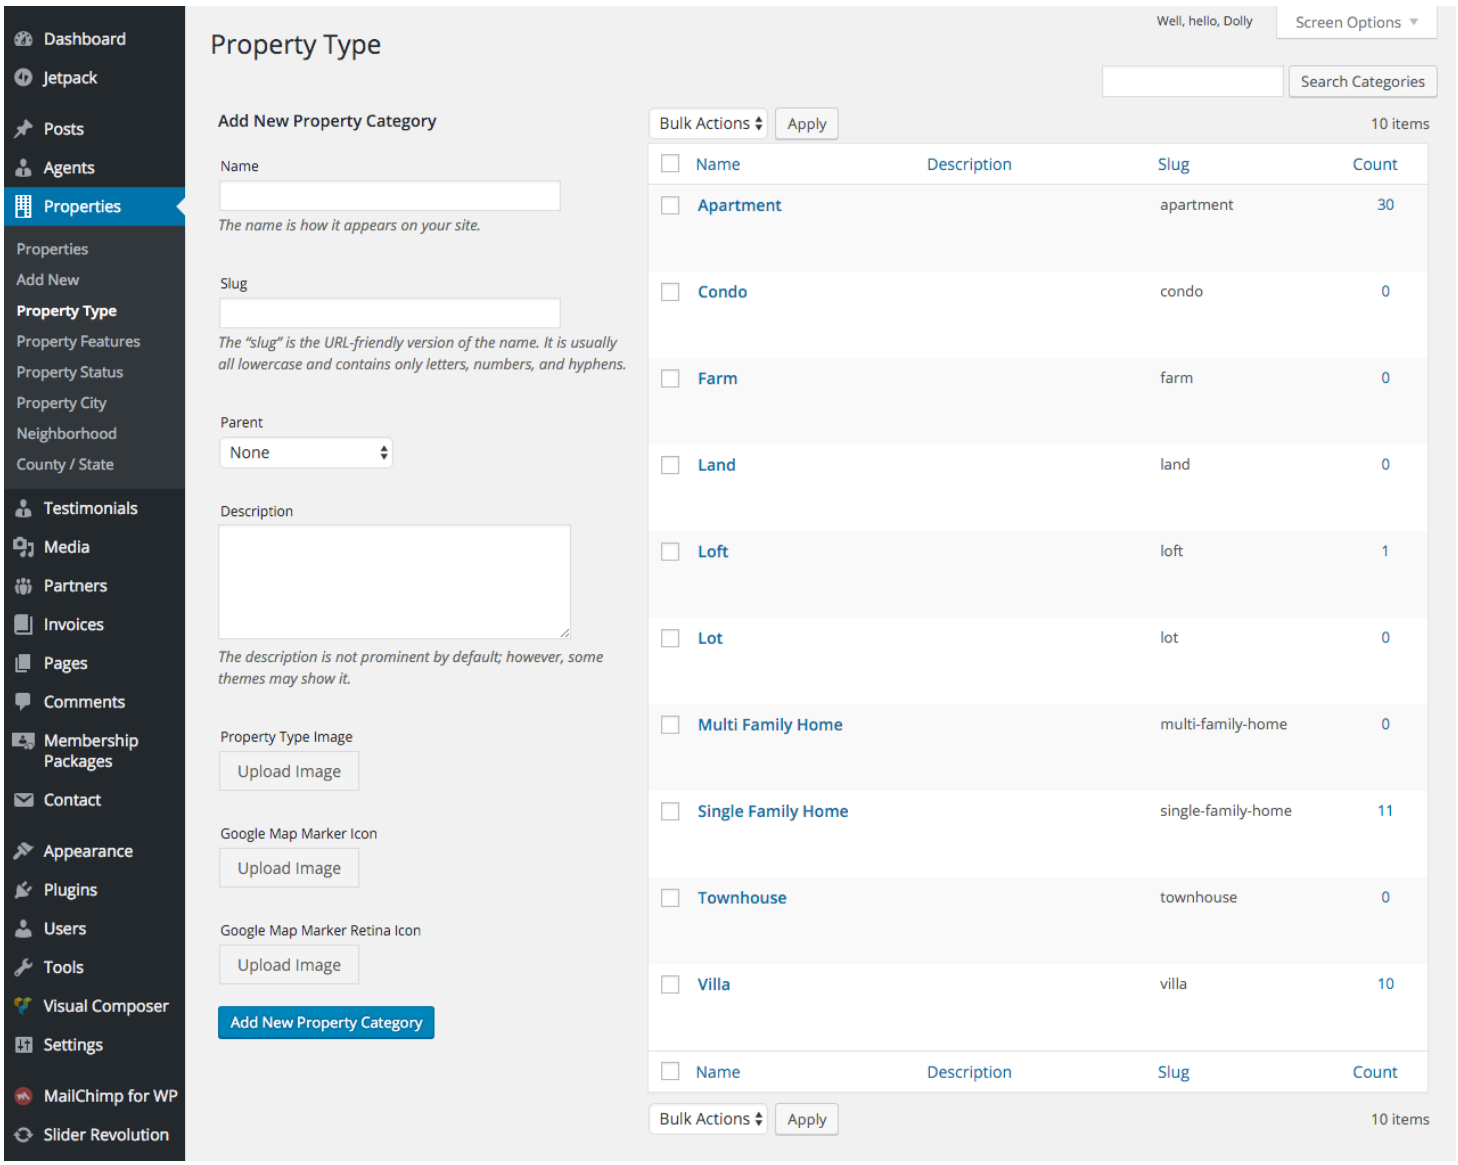
1. Navigate to **Properties** in your admin sidebar and click **Add New** option.
2. **Property Title:** insert a new name for your property in the title field.
3. **Property Description:** insert the property description in the editor field
4. **Property Image:** upload your cover image using the **Featured Image** panel

Property Type

You can create different property type based on your needs, for example you can assign the type Apartment or Single Family Home to a property.



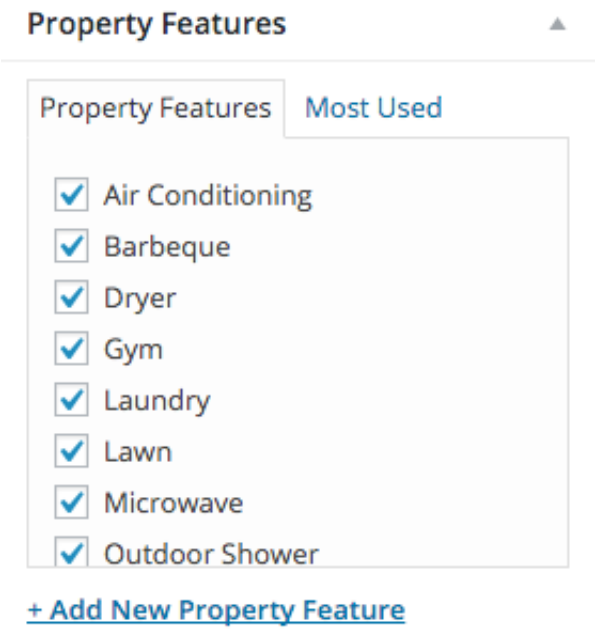
To create a New Type you can use the link "+ Add New Property Type" in the Property Type panel. Alternatively (this is a best pratice to keep tidy, avoiding superfluos labels/property Type and allow you a better customization) you can navigate your admin panel to **Properties > Property Type**



1. **Name:** insert the name for your property type like "Apartment" for example.
2. **Slug:** insert the slug for your property type (optional)
3. **Parent:** select parent property type if needed. Usually you don't need to do it.
4. **Property Type Image:** Upload an image that can describe your property type
5. **Google Map Marker Icon:** Upload the icon to mark this kind of property
6. **Google Map Marker Retina Icon: Upload the icon to mark this kind of property for retina devices**
7. Click on **Add New Property Category**

Property Features

You can create different and unlimited property features based on your needs, for example you can assign the feature Pool or Air Conditioning to a property.

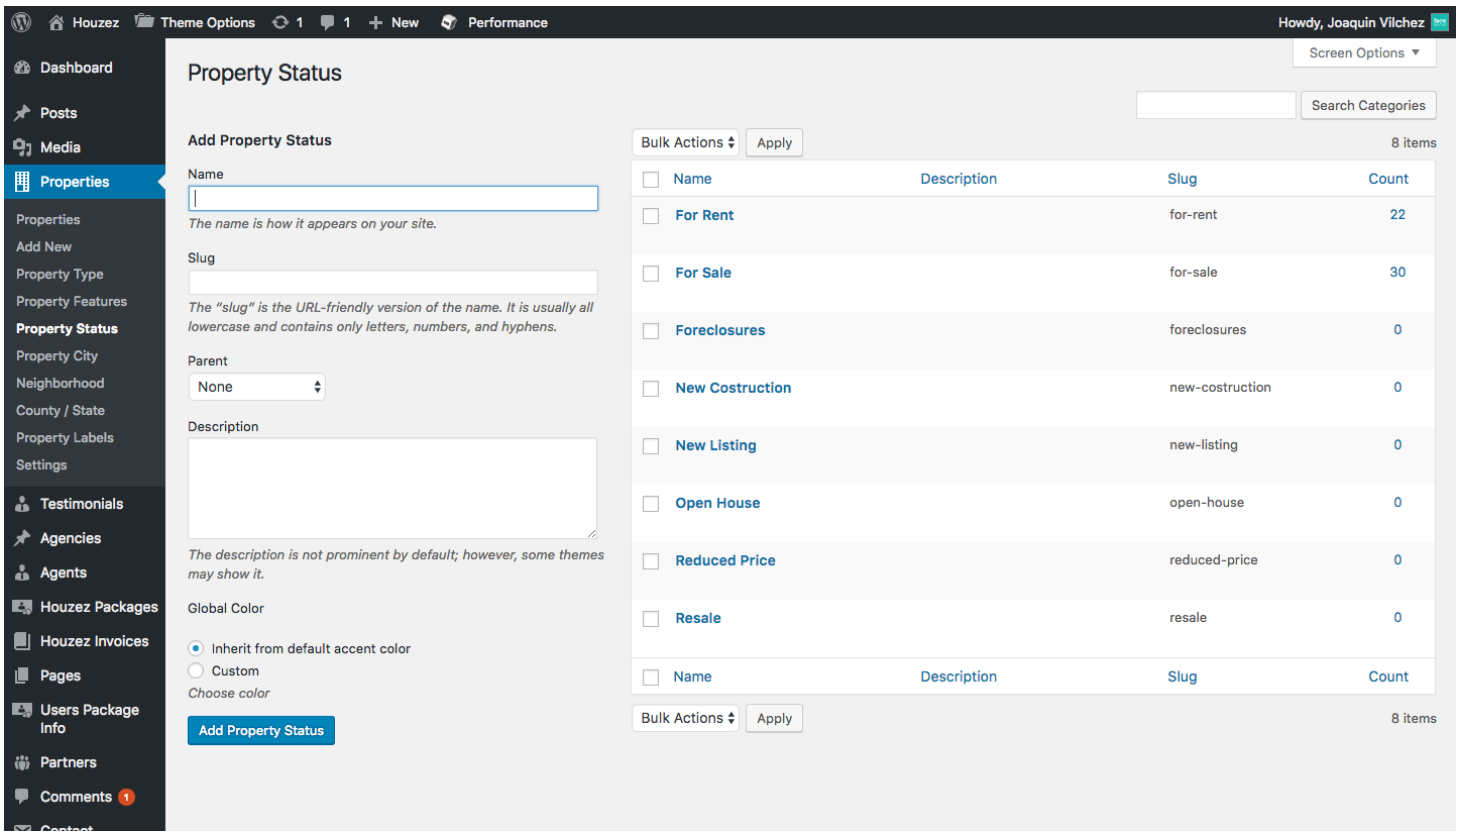


To create a New Features you can use the link "+ Add New Property Feature" in the Property Features panel. Alternatively (this is a best pratice to keep tidy, avoiding superfluos labels/property Features and allow you a better customization) you can navigate your admin panel to **Properties > Property Features**

1. **Name:** insert the name for your property feature like "Pool" for example.
2. **Slug:** insert the slug for your property feature (optional)
3. **Parent:** select parent property type if needed. Usually you don't need to do it.
4. Click on **Add New Property Feature**

Property Status

You can create different and unlimited property status based on your needs, for example you can assign the status For Sale or For Rent to a property.



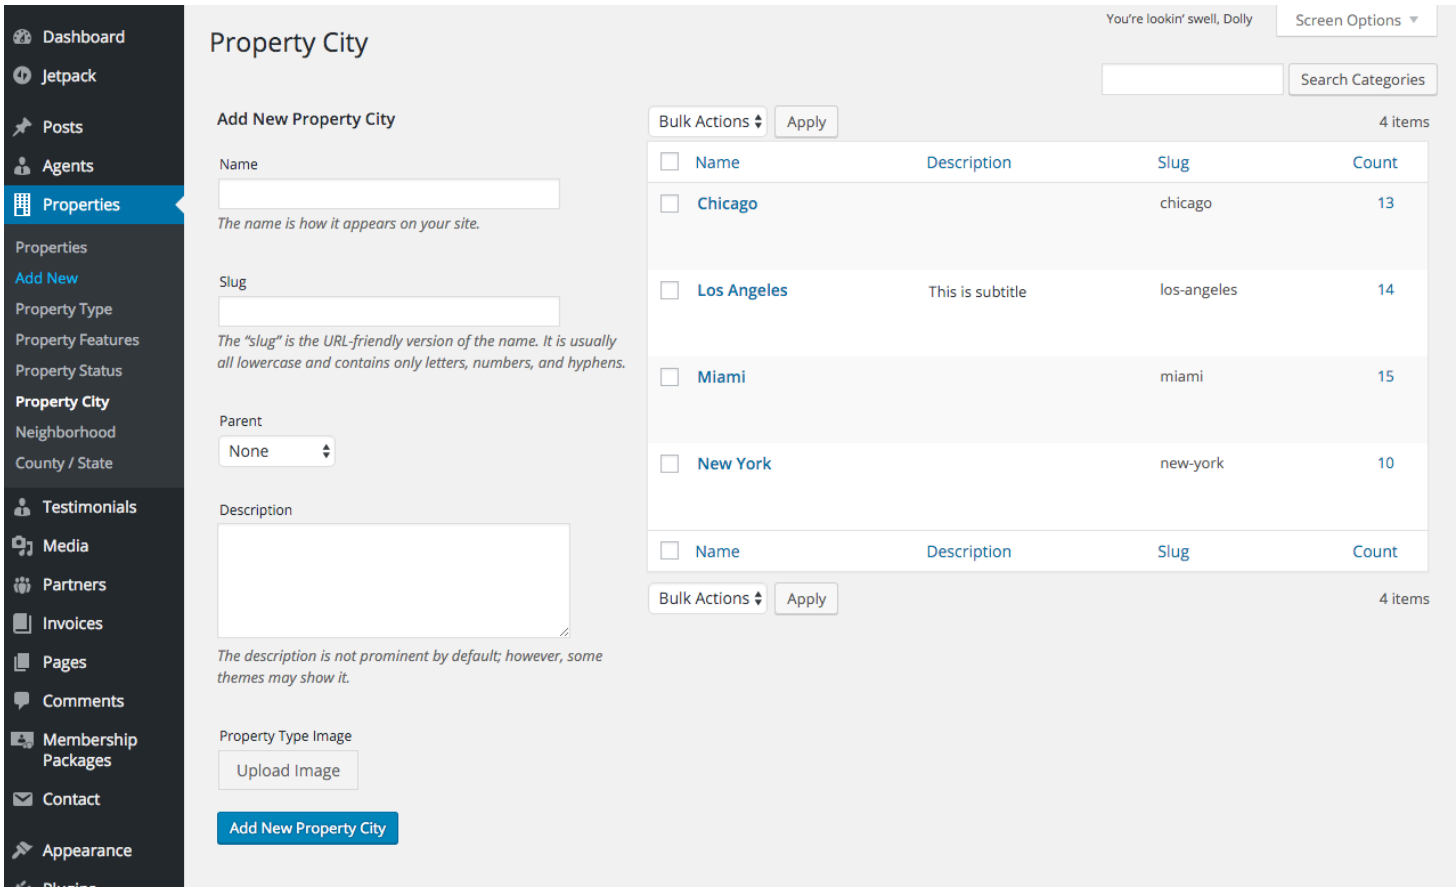
To create a New Status you can use the link "+ Add New Property Status" in the Property Status panel. Alternatively (this is a best pratice to keep tidy, avoiding superfluos labels/property Status and allow you a better customization) you can navigate your admin panel to **Properties > Property Status**

1. **Name:** insert the name for your property status like "For Rent" for example.
2. **Slug:** insert the slug for your property status (optional)
3. **Parent:** select parent property type if needed. Usually you don't need to do it.
4. **Global Color**: choose between **Inherit from default accent color** and **Custom** (if you choose this you’ll have to pic a color from the palette or add #Hex Color Code)**.**
5. Click on **Add New Property Status**

Property City

You can add different and unlimited property cities based on your property places.

To create a New Property City you can use the link "+ Add New Property City" in the Property City panel. Alternatively (this is a best pratice to keep tidy, avoiding superfluos labels/property City and allow you a better customization) you can navigate your admin panel to **Properties > Property City**

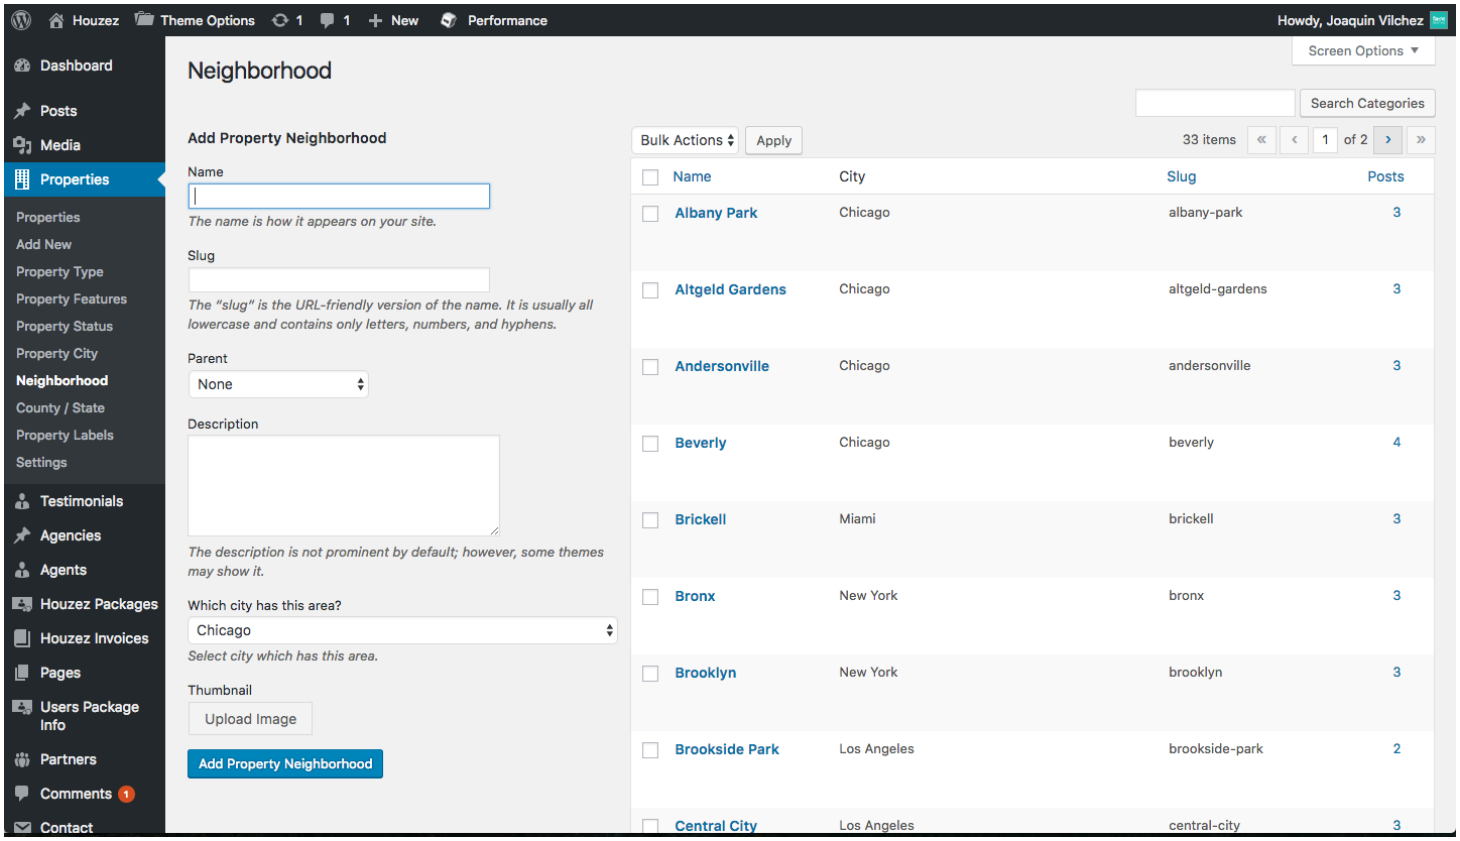


1. **Name:** insert the name for your property city like "Miami" for example.

2. **Slug:** insert the slug for your property city (optional)
3. **Parent:** select parent property city if needed. Usually you don't need to do it.
4. **Property City Image:** Upload an image that can describe your property city
5. Click on **Add New Property City**

Property Neighborhood

You can add different and unlimited property neighborhood based on your property places.



To create a New Property Neighborhood you can use the link "+ Add New Property Neighborhood" in the Property Neighborhood panel. Alternatively (this is a best pratice to keep tidy, avoiding superfluos labels/Property Neighborhood and allow you a better customization) you can navigate your admin panel to **Properties > Property Neighborhood**

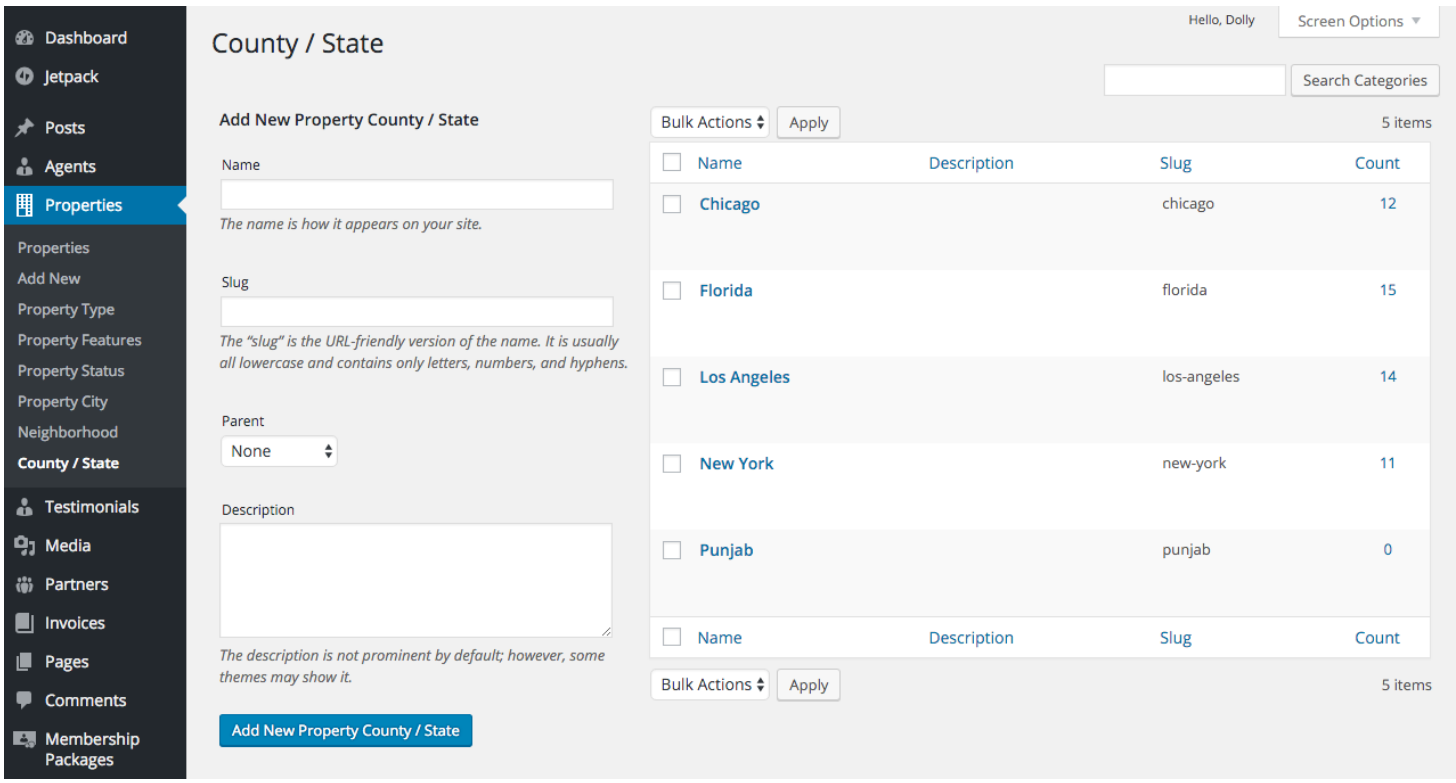
1. **Name:** insert the name for your property city like "Miami" for example.
2. **Slug:** insert the slug for your property city (optional)

3. **Parent:** select parent property city if needed. Usually you don't need to do it.
4. **Select city** which has this area: choose an option from the drop down menu
5. Click on **Add New Property Neighborhood**

Property Country/State

You can add different and unlimited property country/state based on your property places.

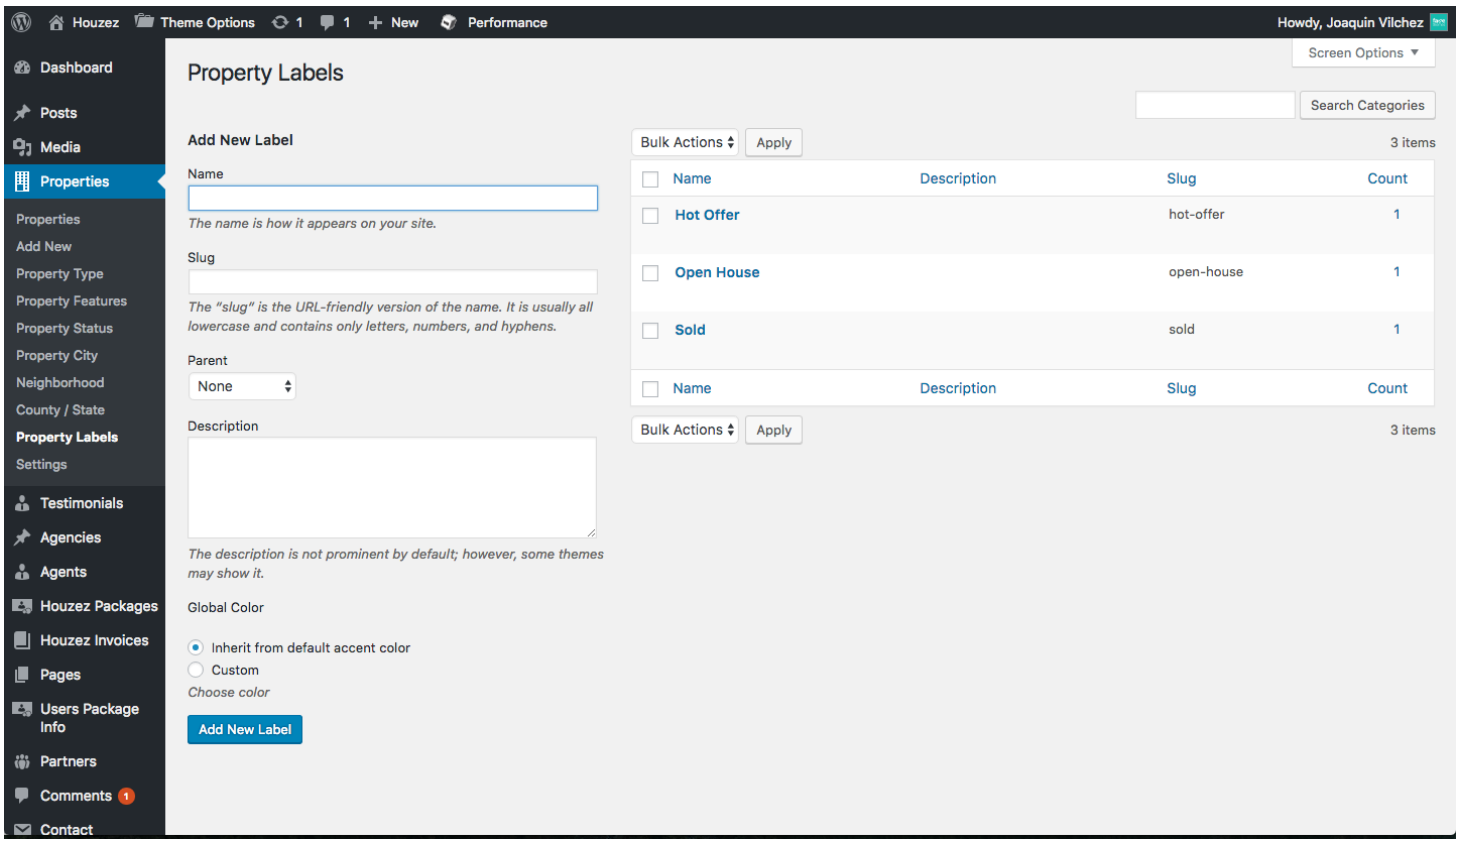
To create a New Property County/State you can use the link "+ Add New Property County/State" in the Property County/State panel. Alternatively (this is a best pratice to keep tidy, avoiding superfluos labels/Property County/State and allow you a better customization) you can navigate your admin panel to **Properties > Property County/State**



1. **Name:** insert the name for your property Country/State like "Florida" for example.
2. **Slug:** insert the slug for your property country/state (optional)
3. **Parent:** select parent property city if needed. Usually you don't need to do it.
4. Click on **Add New Property Country/State**

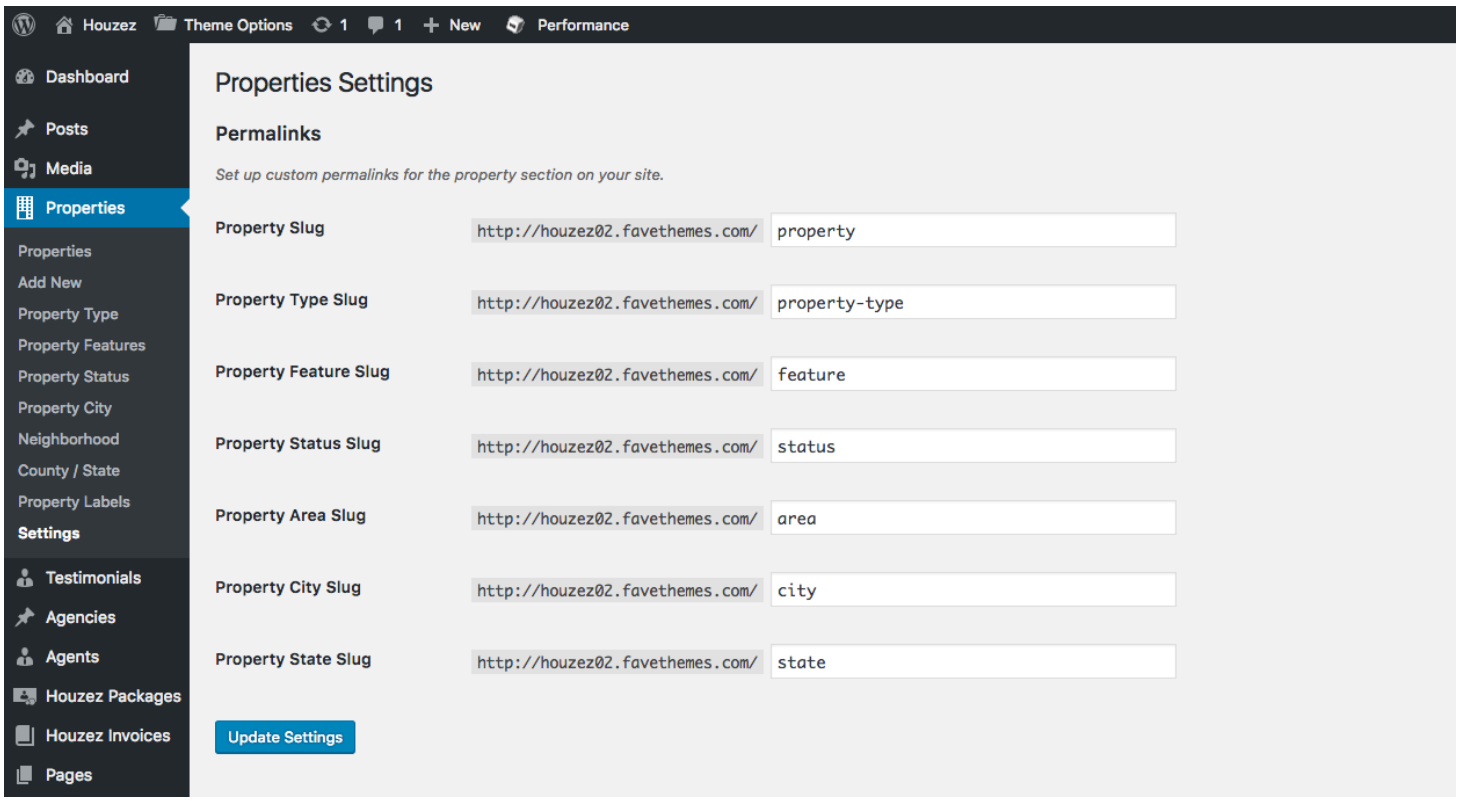
Property Labels

You can add different and specific property labels that will differentiate better your property real estate cards/ads



Property Settings

In this section you can set up custom permalinks for the property sections on your site

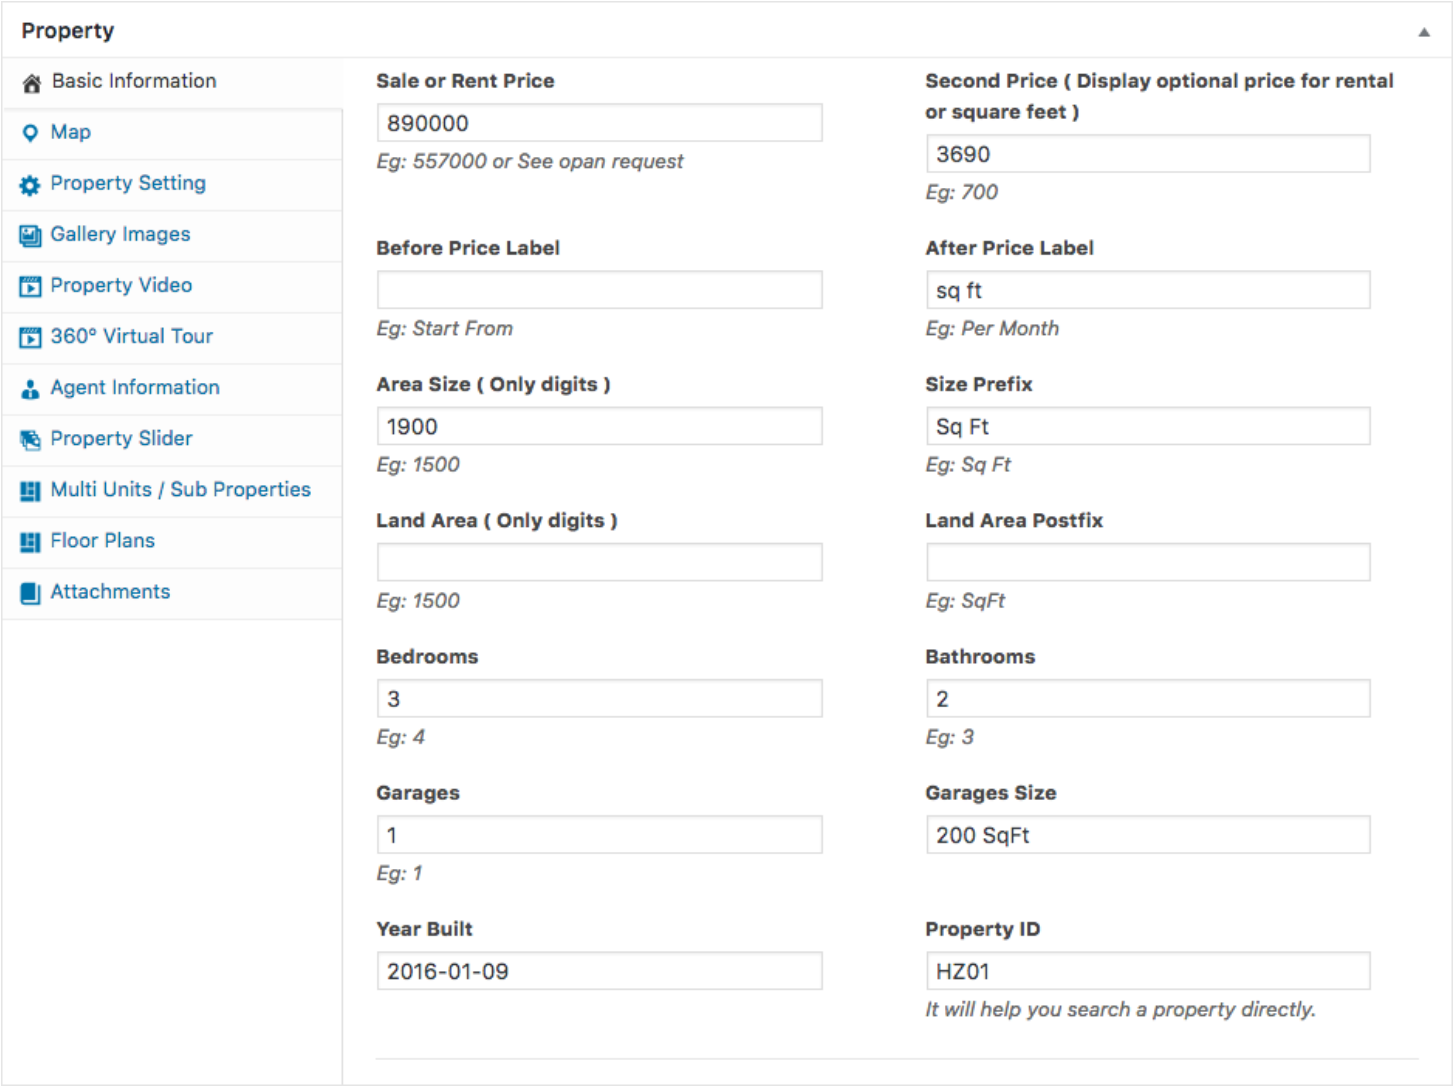


Property Panel

Properties are a crucial part of your website. Houzez has a complete Property Panel where to setup all property extra informations and settings. **This panel is located in the Property Page** and contains different tabs that we are going to explain in this section.

1. **Property Panel** is located into the **edit area (Edit Property)** of the property you are adding/editing; just scroll down to the working area **under visual editor**.

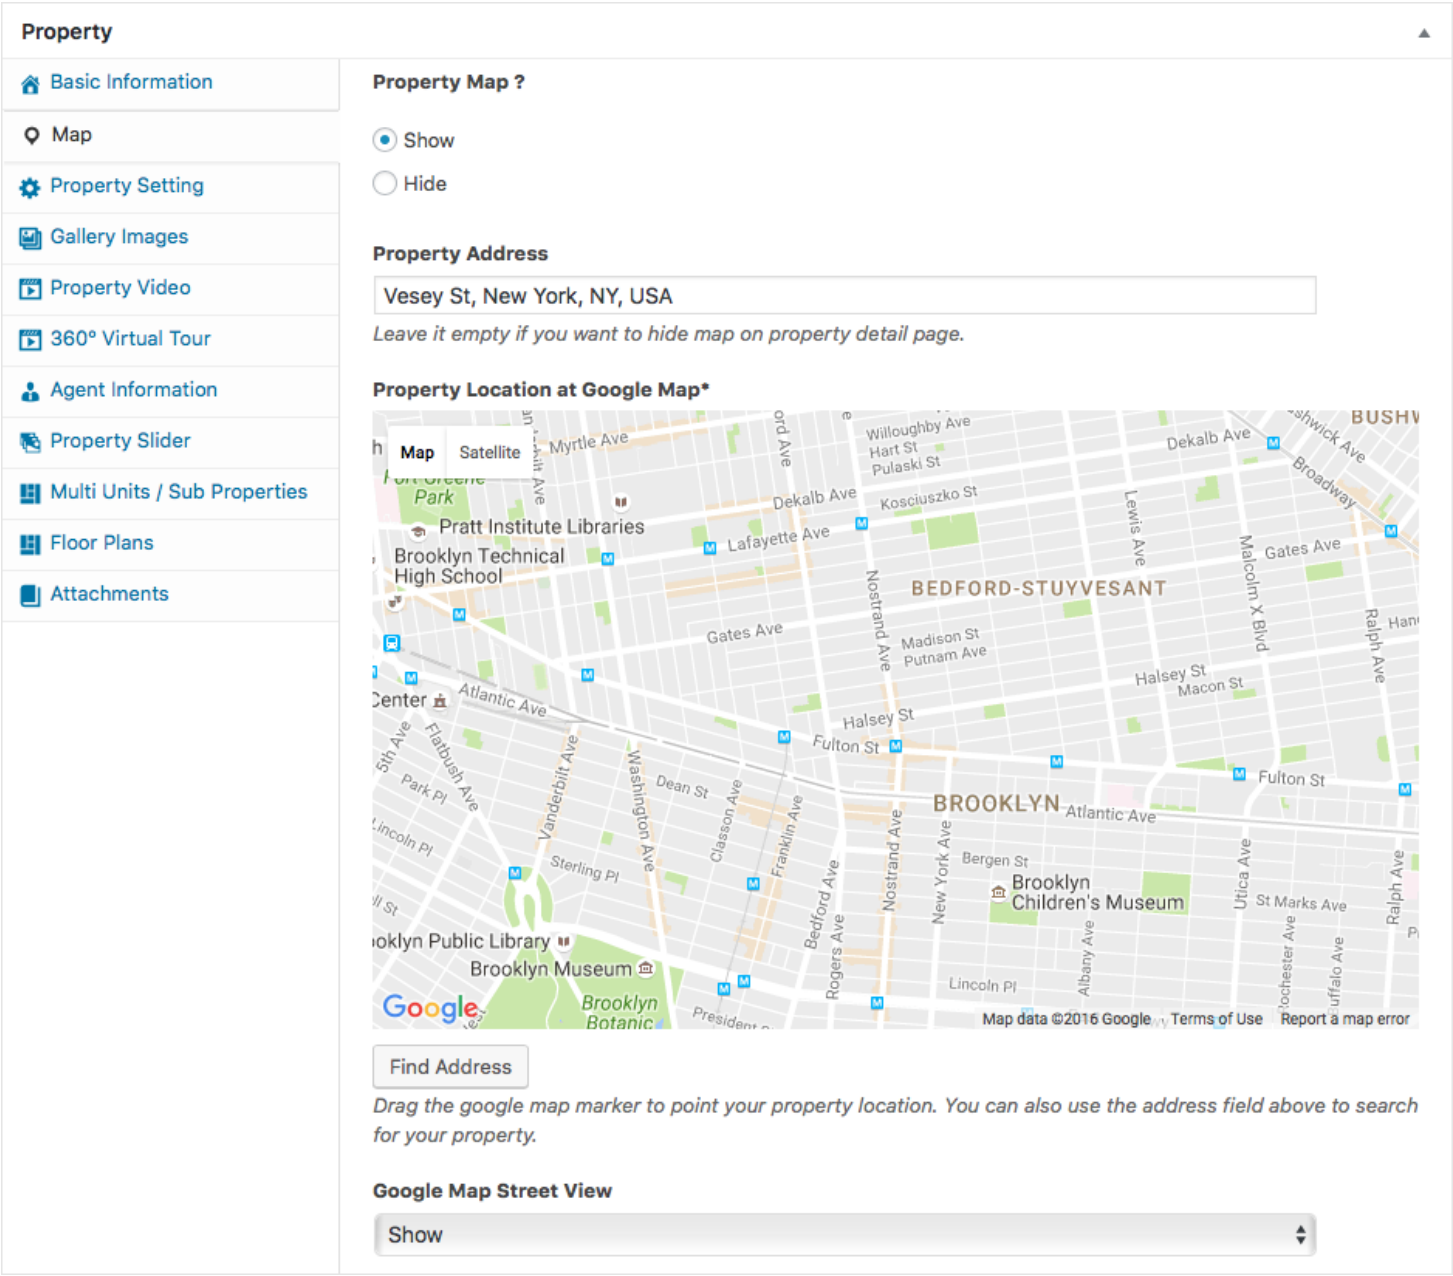
Basic Information



1. **Sale or Rent Price (Only digits):** Enter the price for sale or for rent of your property
2. **Second Price (Display optional price for rental or square feet):** This is optional price where you can show price per square feet or you can use as you want
3. **After Price Label:** It should be basically what you want. Example Sqft, or /montly, etc...
4. **Area Size (Only digits):** Insert area size
5. **Size Prefix:** Insert area size prefix
6. **Bedrooms:** Insert number of bedrooms
7. **Bathrooms:** Insert number of bathrooms
8. **Garages:** Insert number of garage
9. **Garages Size:** Insert garage size

10. **Year Built:** Insert the year when the property was built
11. **Property ID:** Insert the property ID

Map



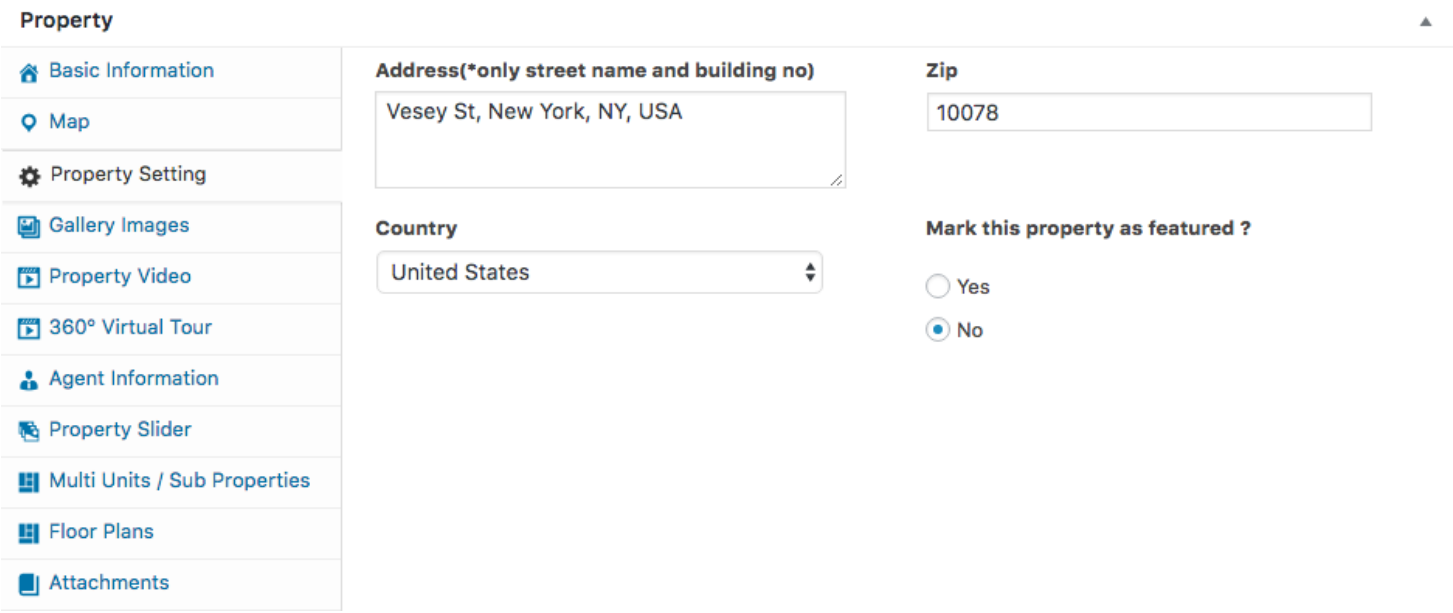
1. **Property Map:** Select if you want to show or hide the map on the property page
2. **Property Address:** Insert the property address or leave it empty if you want to hide map on

property detail page. As soon you start type the address the system will suggest you the full formatted address. We keep this information from Google Map database.

3. **Property Location at Google Map:** Drag the google map marker to point your property location. You can also use the address field above to search for your property.
4. **Google Map Street View:** Select if you want to show or hide the Google Map Street View on the property page

---

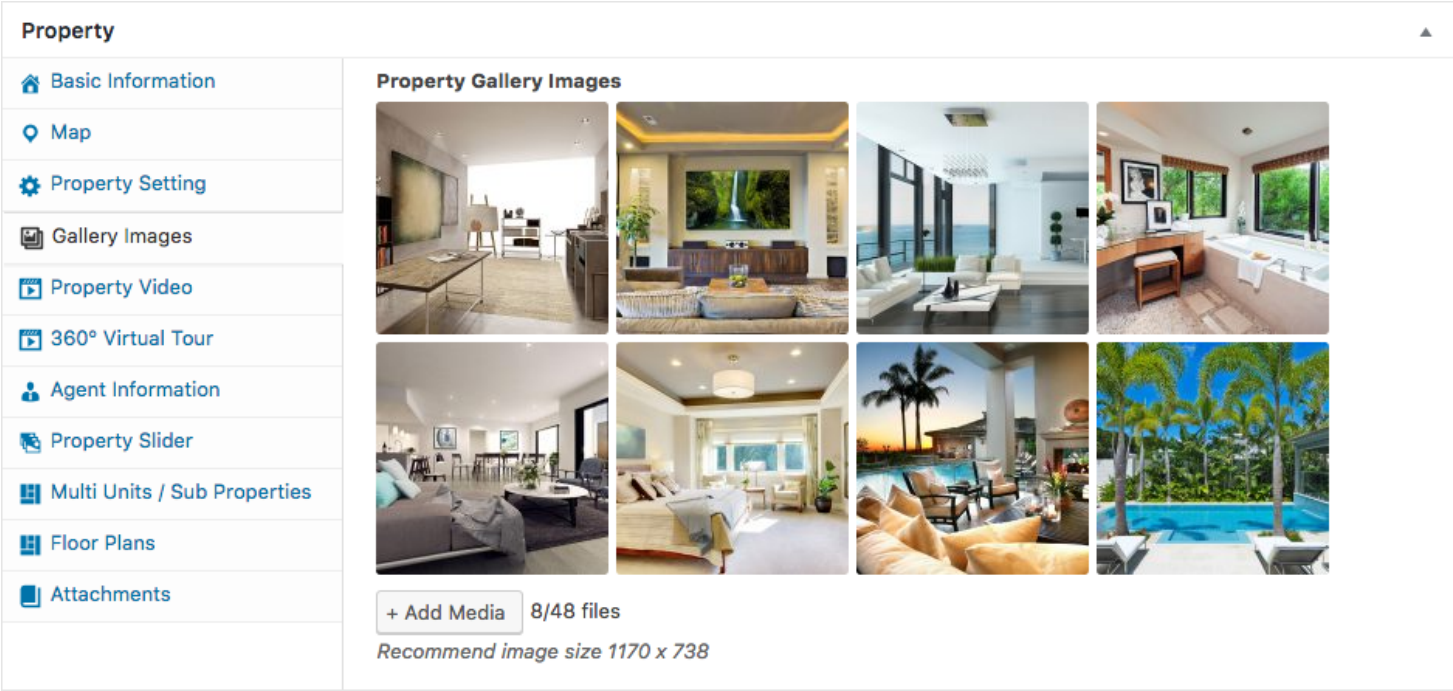
Property Settings



1. **Address(only street name and building no):** Insert only street name and building number
2. **Zip:** Insert the Zip/Area code
3. **Country:** Select a Country
4. **Mark this property as featured:** Select if you want to display this property as featured

---

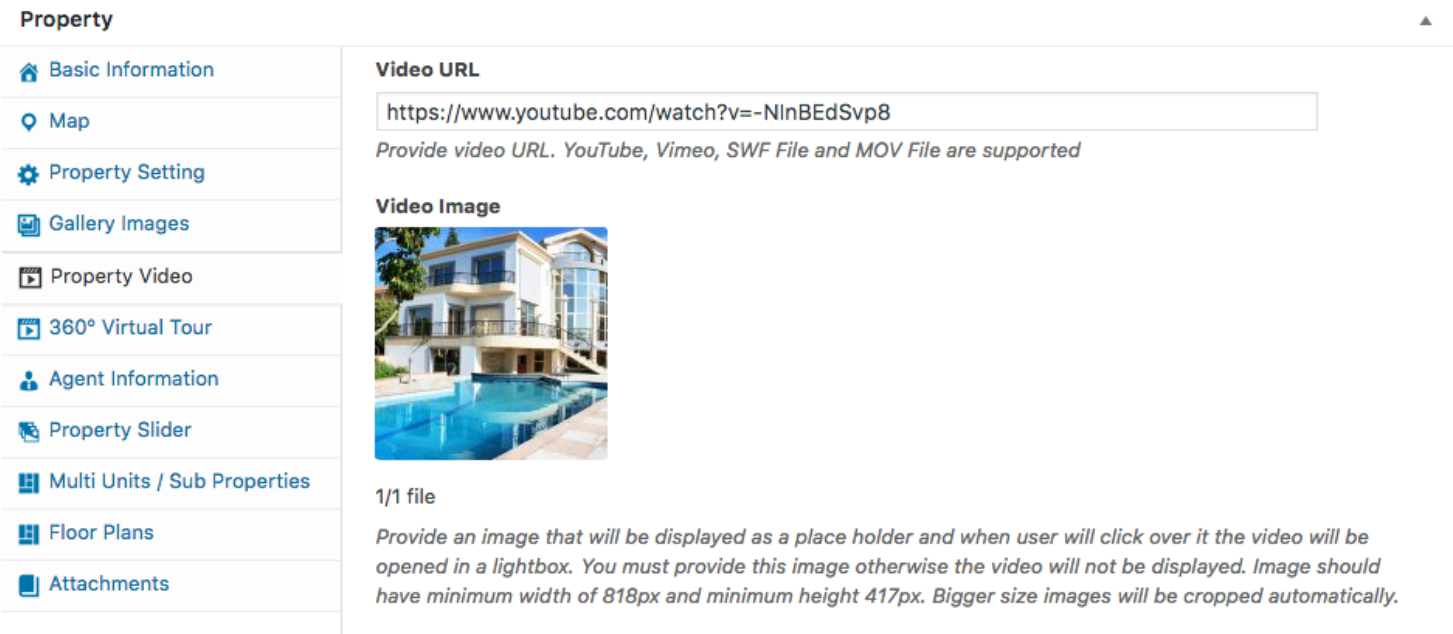
Gallery Images



1. **Property Gallery Images:** Click on Select or Upload Images and start uploading your images
2. After to have uploaded your images then **you can re-order with a simple drag and drop**.
3. **These images will be displayed in the property gallery.**

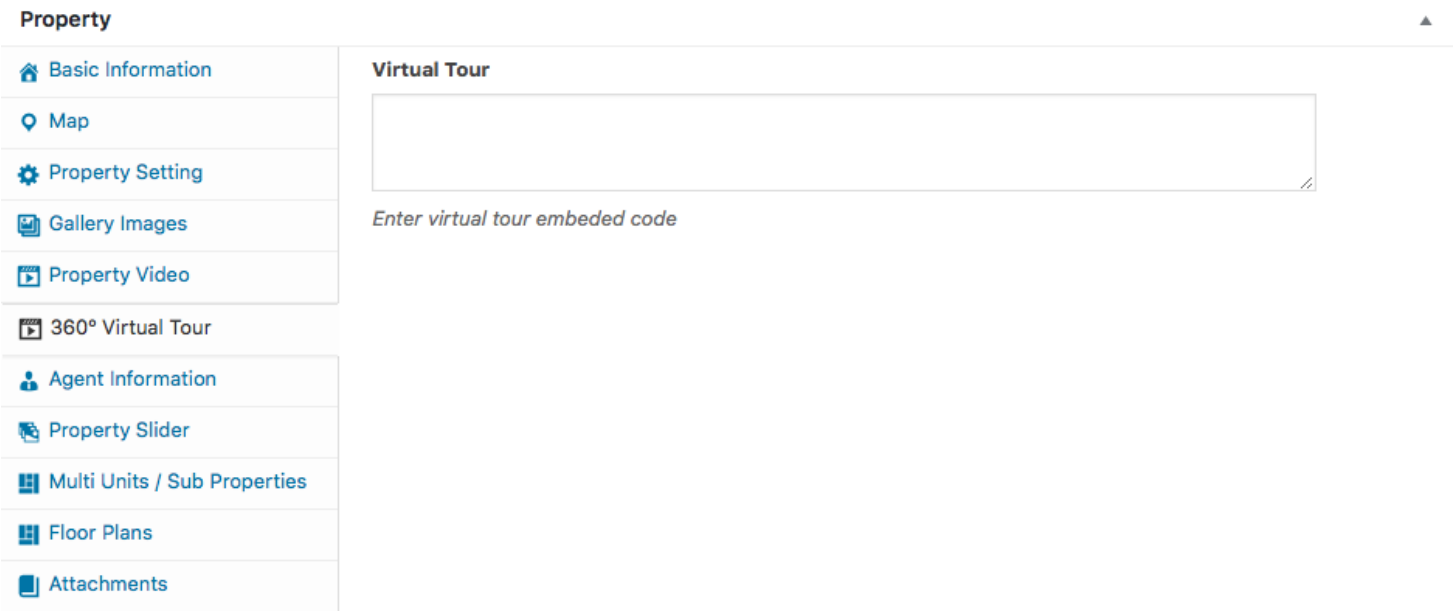
Note: Minimum image size: 1170x738px

Property Video



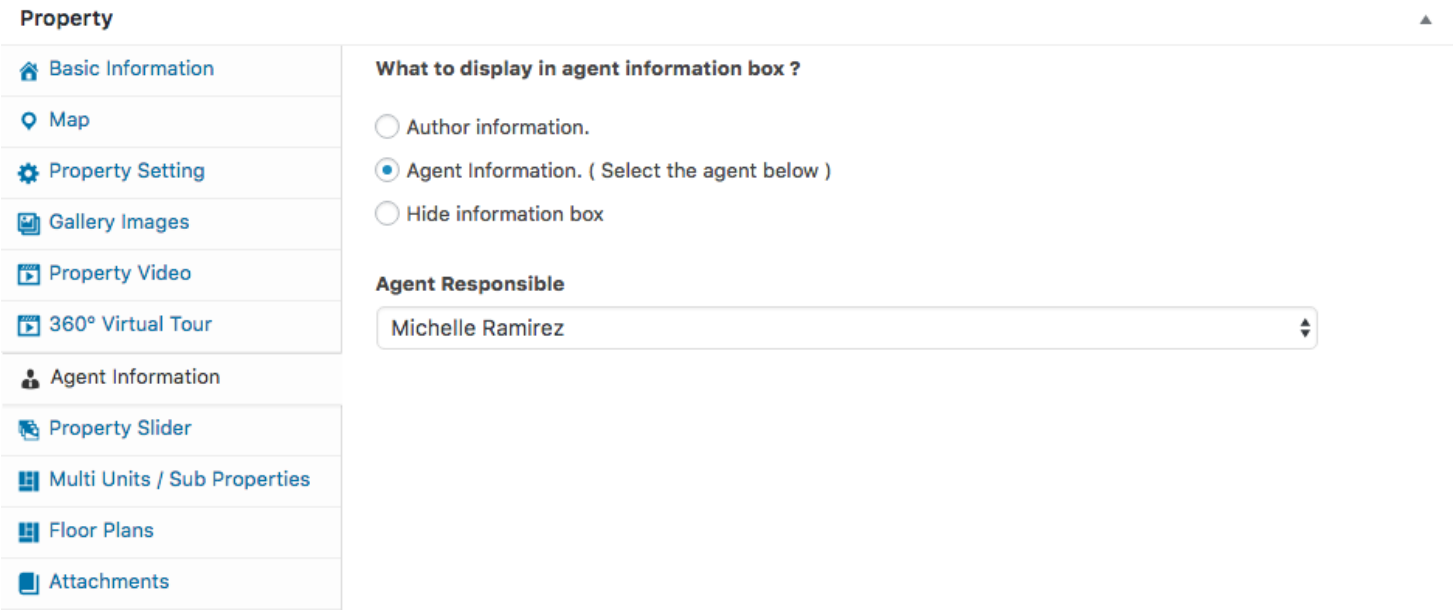
1. **Video URL:** Insert video URL. YouTube, Vimeo, SWF File and MOV File are supported.
2. **Video Image:** Provide an image that will be displayed as a place holder and when user will click over it the video will be opened in a lightbox. You must provide this image otherwise the video will not be displayed. Image should have minimum width of 818px and minimum height 417px. Bigger size images will be cropped automatically.

360° Virtual Tour



1 **Virtual Tour:** paste here the embedded code to show the 360° virtual tour on property page.

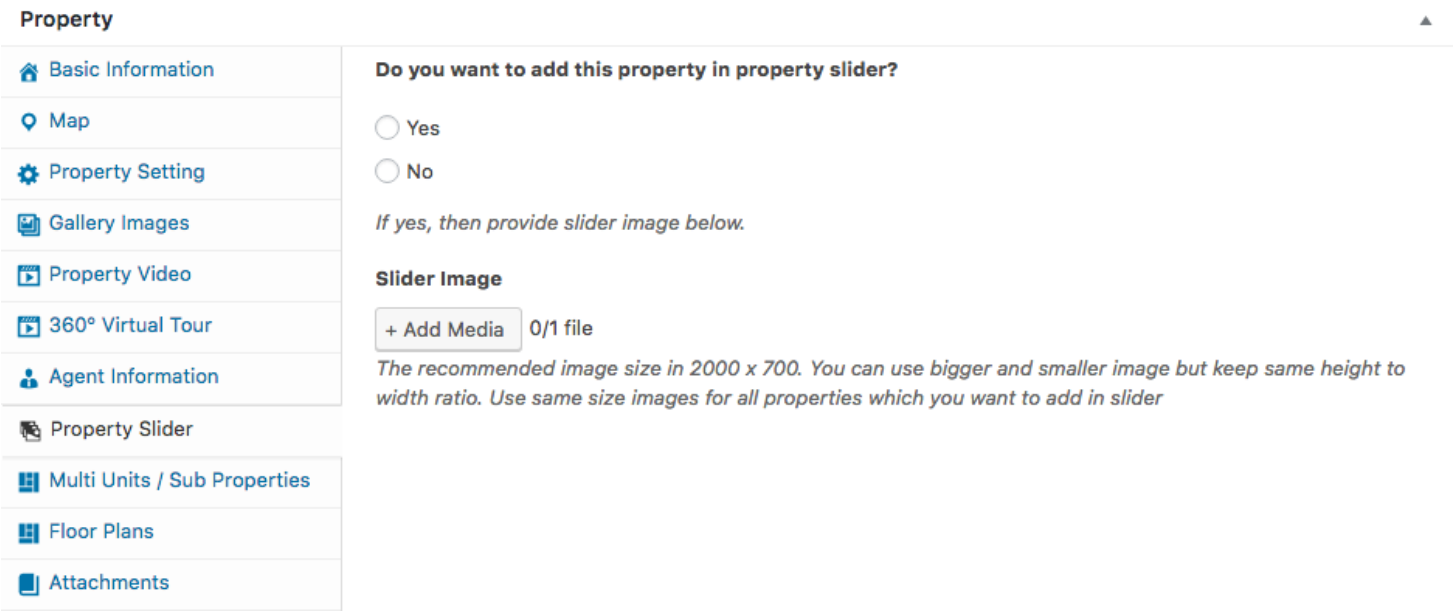
Agent Information



1. **What to display in agent information box:** Select the information you wnat to show
2. **Agent Responsible:** The property can be assigned to one of your agents but will not show

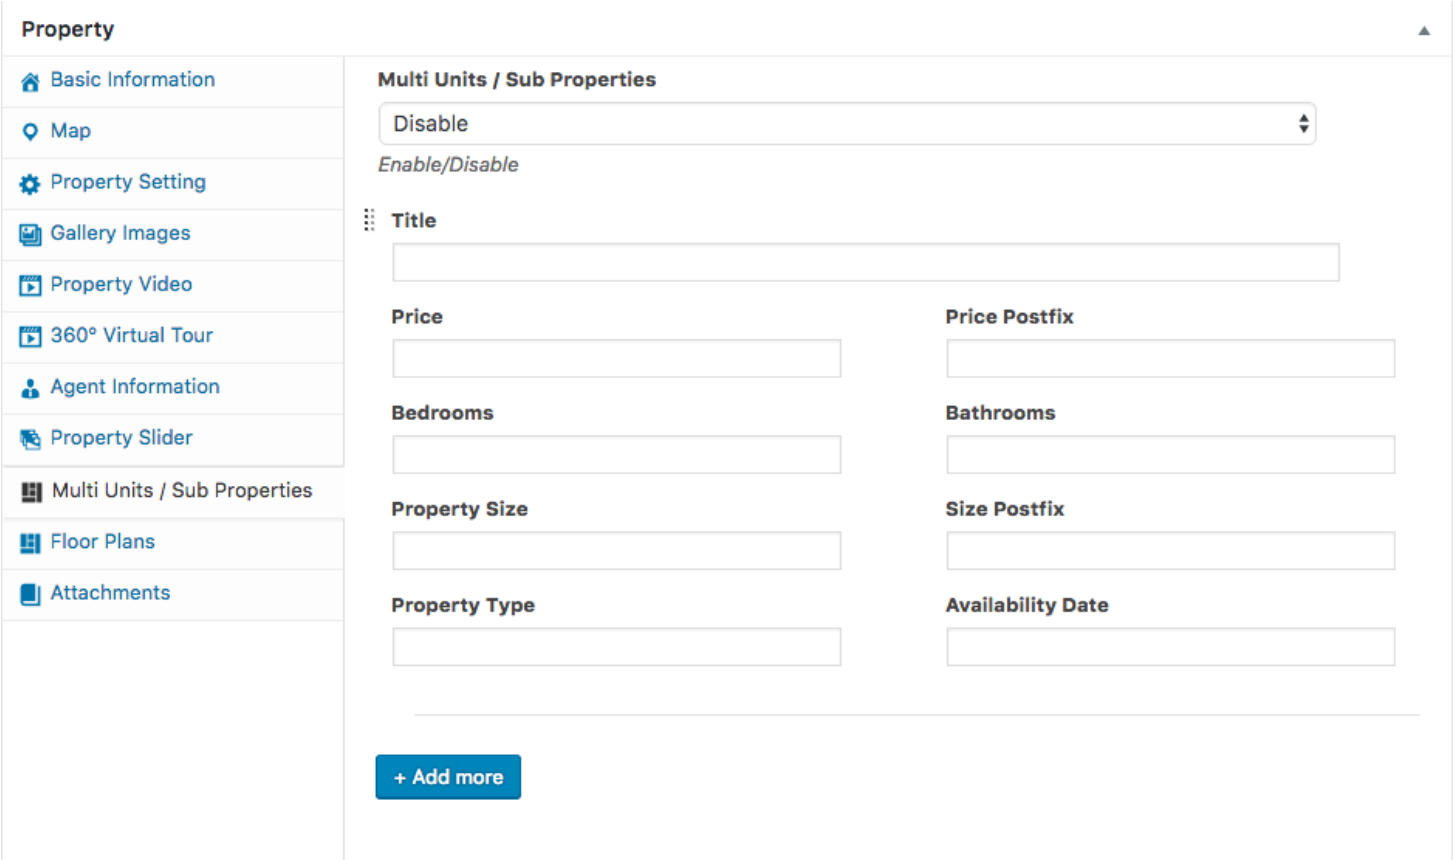
under agent account.

Property Slider



1. **Do you want to add this property in property slider?** If you select Yes, this property will be displayed in the custom Houzez Property Slider
2. **Slider Image:** Select the image that will be use as slider image. The recommended image size is 2000px x 700px. You can use bigger and smaller images but keep same height to width ratio. Use same size for all images of the properties you want to add to the slider.

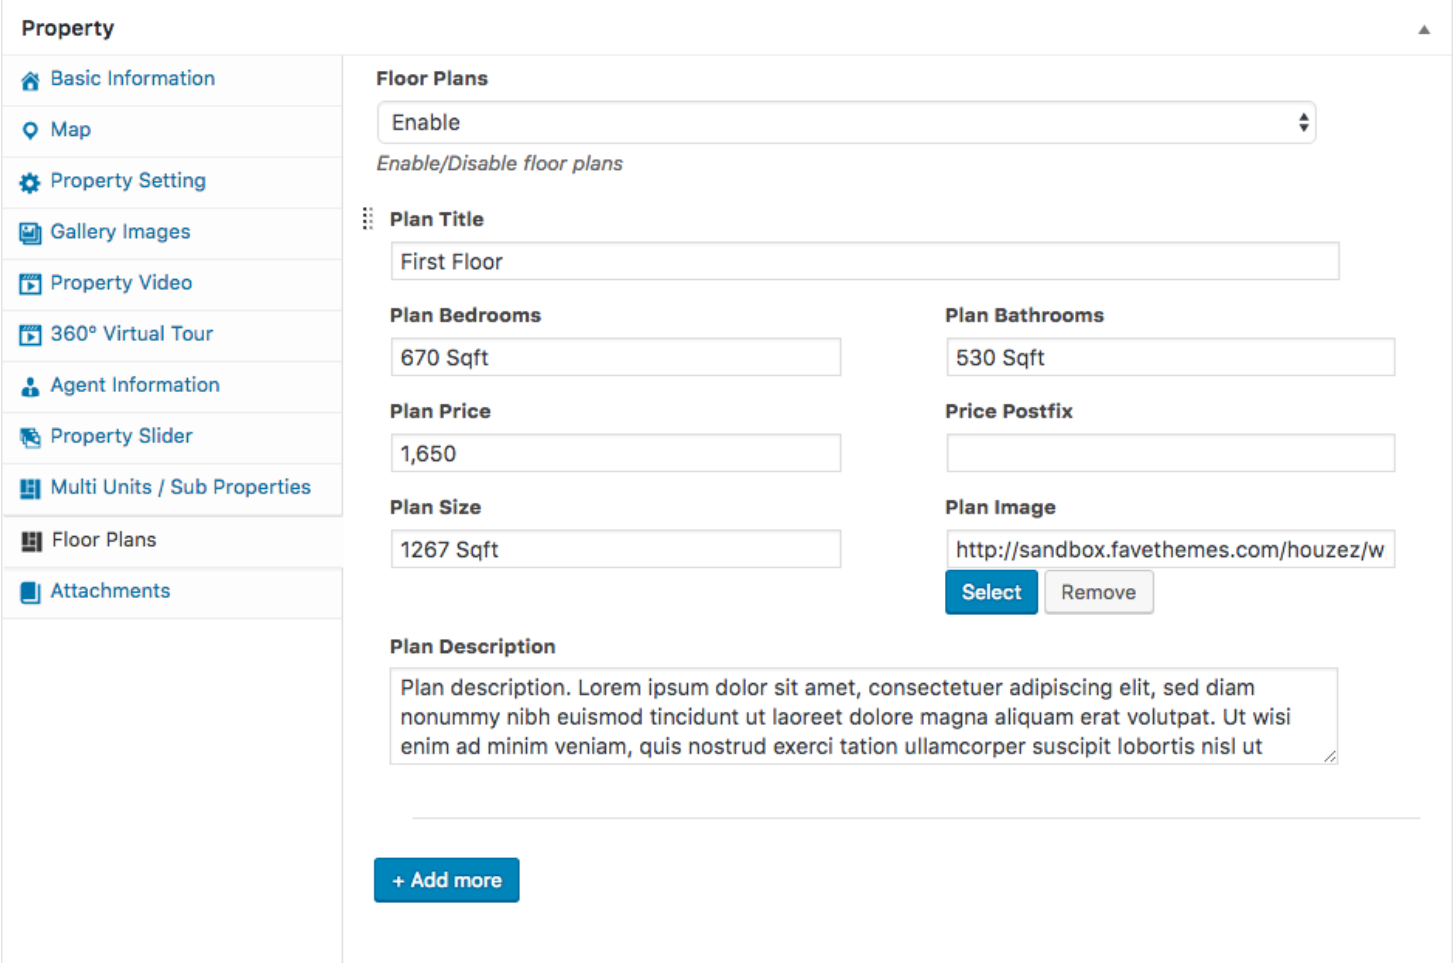
Multi Units / Sub Properties



This feature allow you to list multi units or sub properties below one property.

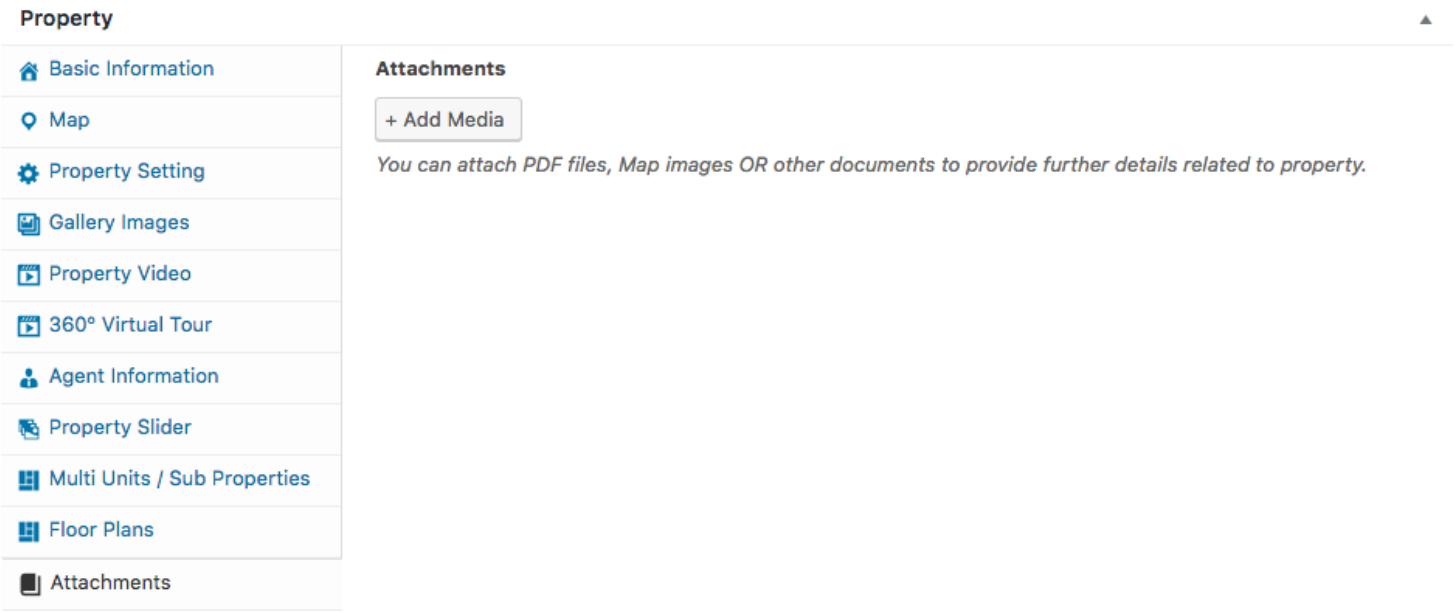
1. **Multi Units / Sub Properties:** enable or disable
2. **Title:** Add the unit title
3. **Price:** unit price
4. **Price Postfix**: insert the price postfix
5. **Bedrooms:** Number of bedrooms
6. **Bathrooms:** Number of bathrooms
7. **Property Size:** Insert the size
8. **Size Postfix:** insert the postfix for sizes like Sqft or Mt/q at your choice
9. **Property Type:** Insert the property type, it can be what ever like Apartment or Living room
10. **Availability Date:** insert the date of availability
11. Click on **+ Add more** button do add more sub unit

Floor Plans



1. **Floor Plans:** Enabling this feature you can add unlimited floor plans information to your property.
2. **Plan Title:** Insert plan title
3. **Plan Bedrooms:** Insert number of plan bedrooms
4. **Plan Bathrooms:** Insert number of plan bathrooms
5. **Plan Price:** Insert plan price
6. **Price Postfix:** Insert price postfix
7. **Plan Size:** Insert plan size
8. **Plan Image:** Upload plan image
9. **Plan Description:** Insert plan description
10. Click on **Add more** button if you need to add more property plans

Attachments



1. **Select or Upload Files:** You can attach PDF files, Map images OR other documents to provide further details related to property.

Additional Details

1. **Additional Features:** Enabling this feature you can add unlimited additional features/details to your property.
2. **Title:** Insert additional feature title
3. **Value:** Insert additional feature value
4. Click on **+ Add more** button if you need to add more additional features

---

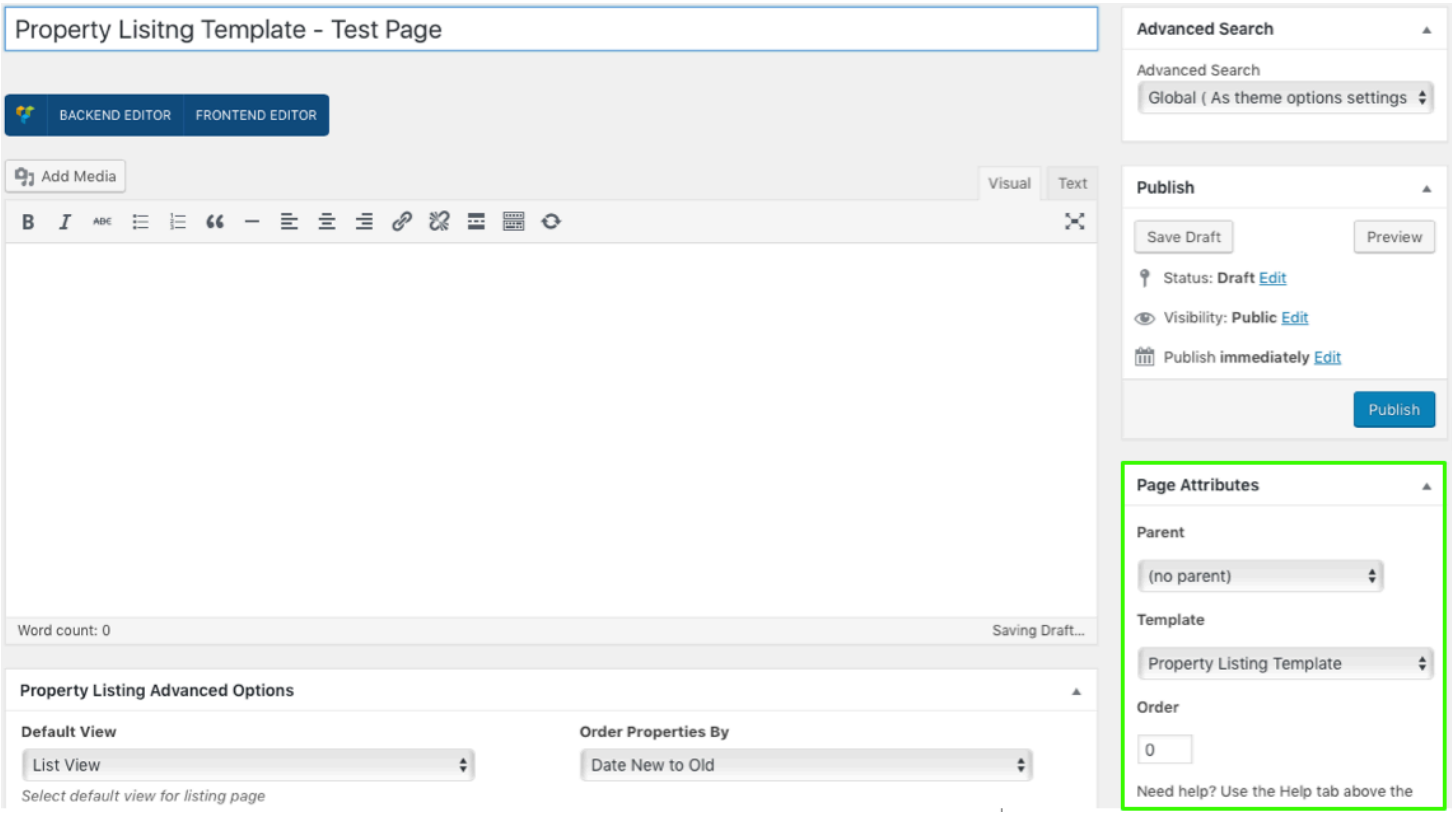
Assign Property to User

By assigning this property to a user he will be able to manage/edit property and will show under his account.

11. Listing Page

Once you created all the properties you need in your website you have to show them in a properly page template. In this section we will discuss all options available to create the Listing Page of your website.

How to Create a Listing Page



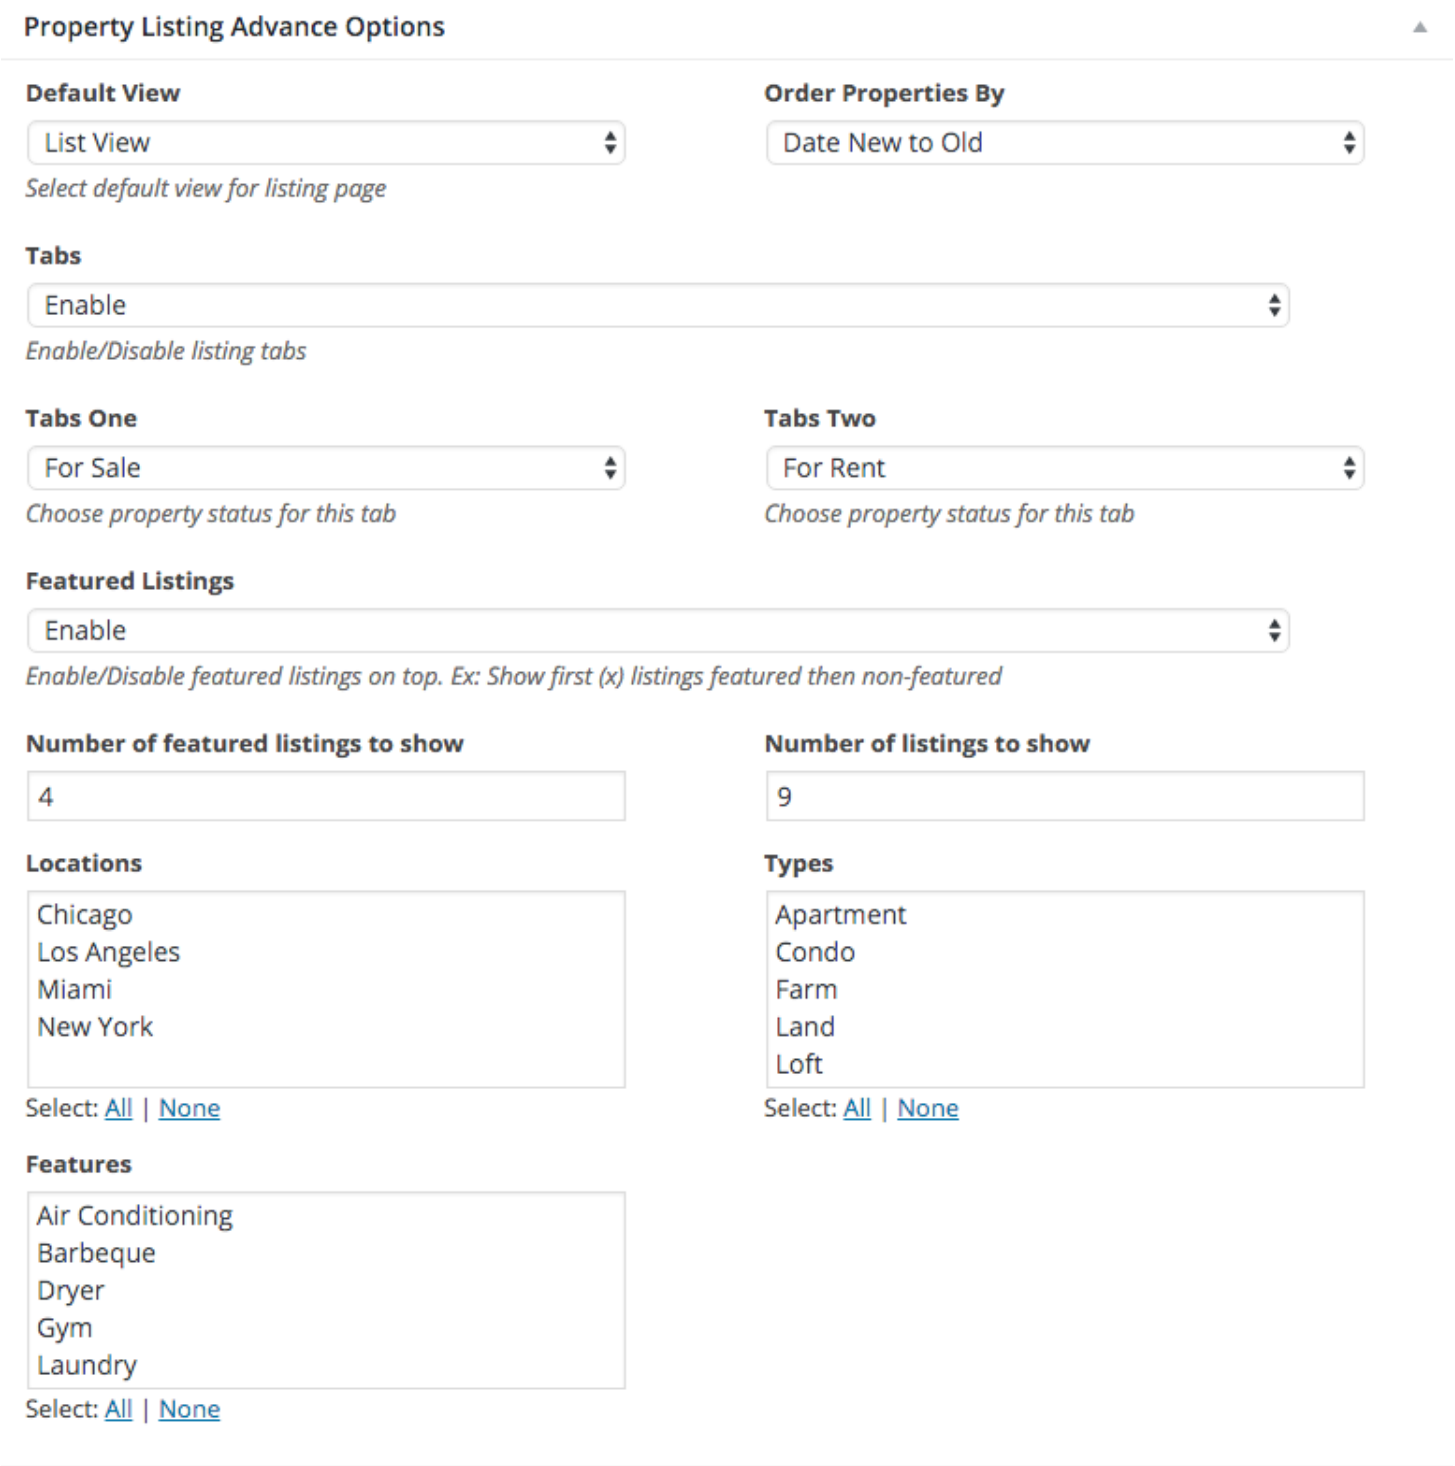
1. Navigate to **Pages** in your admin sidebar and click **Add New** option.
2. Input a new name for your page, then find the Page Attributes box on right side.
3. **Page Attributes:**
    1. Set your Parent page. It’s usually set to No Parent.

2. Set your page template from the Template dropdown list. To create a Listing Page please select >**Property Lisitng Template or Property Listing Template Full Width**

4. Publish Page

Property Listing Advanced Options

In this panel you will find a lot of options to customize your listing pages exactly as you need it. Let's see how.



1. **Default View:** Select default view for listing page
2. **Order Properties By:** Select how fo you want to order your properties
3. **Tabs:** You can choos if you want to eneble or disable tabs
4. **Tabs One:** Choose property status for this tab

5. **Tabs Two:** Choose property status for this tab
6. **Featured Listings:** Enable/Disable featured listings on top. Ex: Show first (x) listings featured then non-featured
7. **Number of featured listings to show:** Enter the number of featured properties to show on top
8. **Number of listings to show:** Enter the number of properties to show on top
9. **Locations:** Optionally you can select which locations you want to display
10. **Types:** Optionally you can select which proeprty type you want to display
11. **Features:** Optionally you can select which property features you want to display

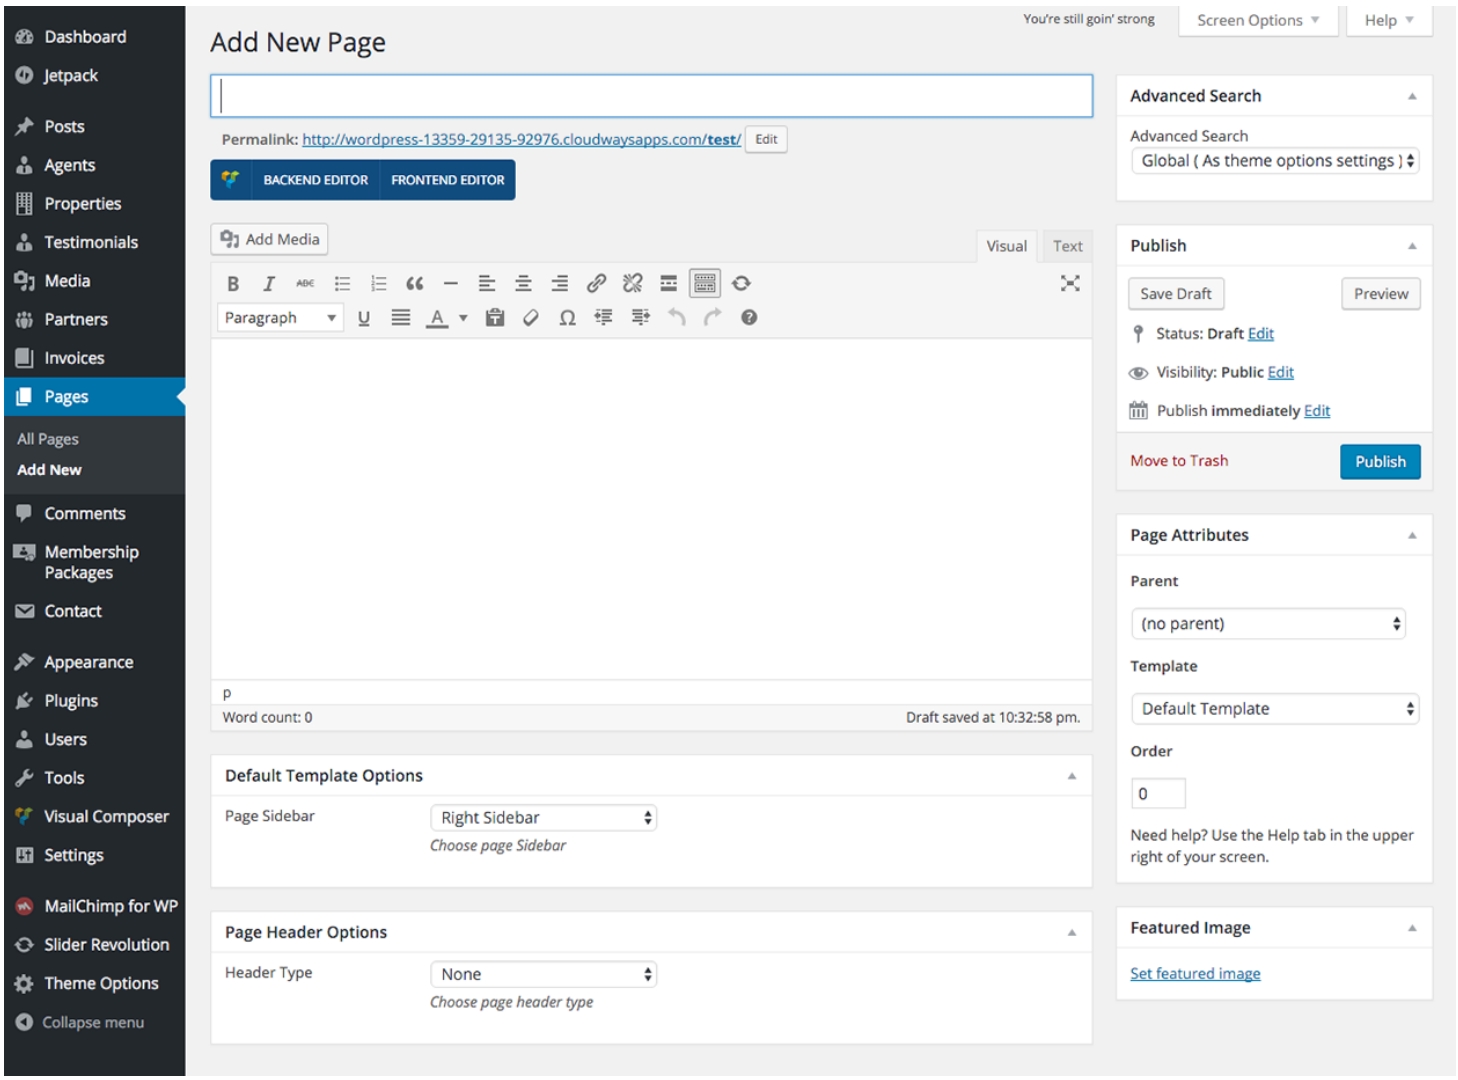
Note: Because listing pages are regular static pages you also have the options to customize Page Header Options or the Advanced Search options.

12. Pages - Create a New Page

Pages are the backbone of your website, and most likely you will setup several of them. There are different page templates to choose from, each serving a purpose to help you build a finished site.

You can create any number of pages with content. Houzez includes several page templates to choose from, and you will need to choose the page template that suits your needs. All of this is done in the pages section of your WordPress admin.

How to create a new page



1. Navigate to **Pages** in your admin sidebar and click **Add New** option.
2. Input a new name for your page, then find the Page Attributes box on right side.
3. **Page Attributes:**
4. Set your Parent page. It’s usually set to No Parent.
5. Set your page template from the Template dropdown list. To create a custom page like the Homepage please select > **Page Template**
6. **Default Template Options:** choose if you want to display sidebar
7. **Page Header Options:** choose from different header types
8. **Page Navigation Options**: you can set Main Menu Transparent (choose yes/no). **NOTE**: it will only work with header 4, you can choose header 4 from Theme options

9. **Revolution Slider Options**: choose slide template (it’s usually set on “default”)
10. **Featured Image**: choose if you want to set a particular image on your page.
11. **Advanced Search:** You can overwrite search globla option and personalize the search in each page
12. **Insert Content:** input your content in the editing field or use the Visual Composer Backend Editor. IN our demo page content is mainly built using Visual Composer modules. **See the Visual Composer section** for how to use them.
13. Publish page

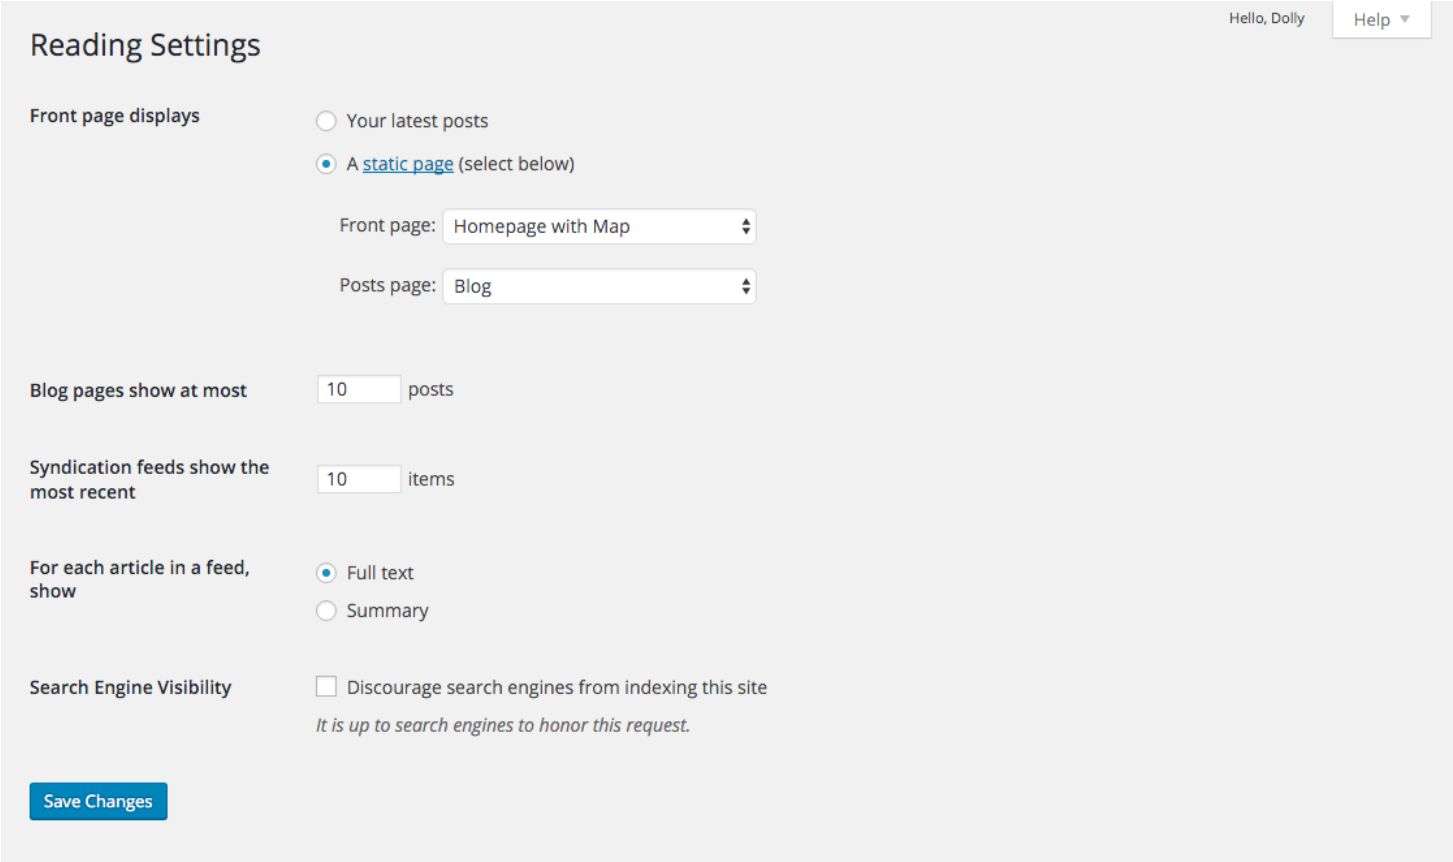
---

13. Pages - Create The Homepage

By default, WordPress shows your most recent posts in reverse chronological order on the front page of your site. Many WordPress users want a static front page or splash page as the front page instead. This "static front page" look is common for users desiring static or welcoming information on the front page of the site.

The look and feel of the front page of the site is based upon the choices of the user combined with the features and options of Houzez theme.

How to create the homepage

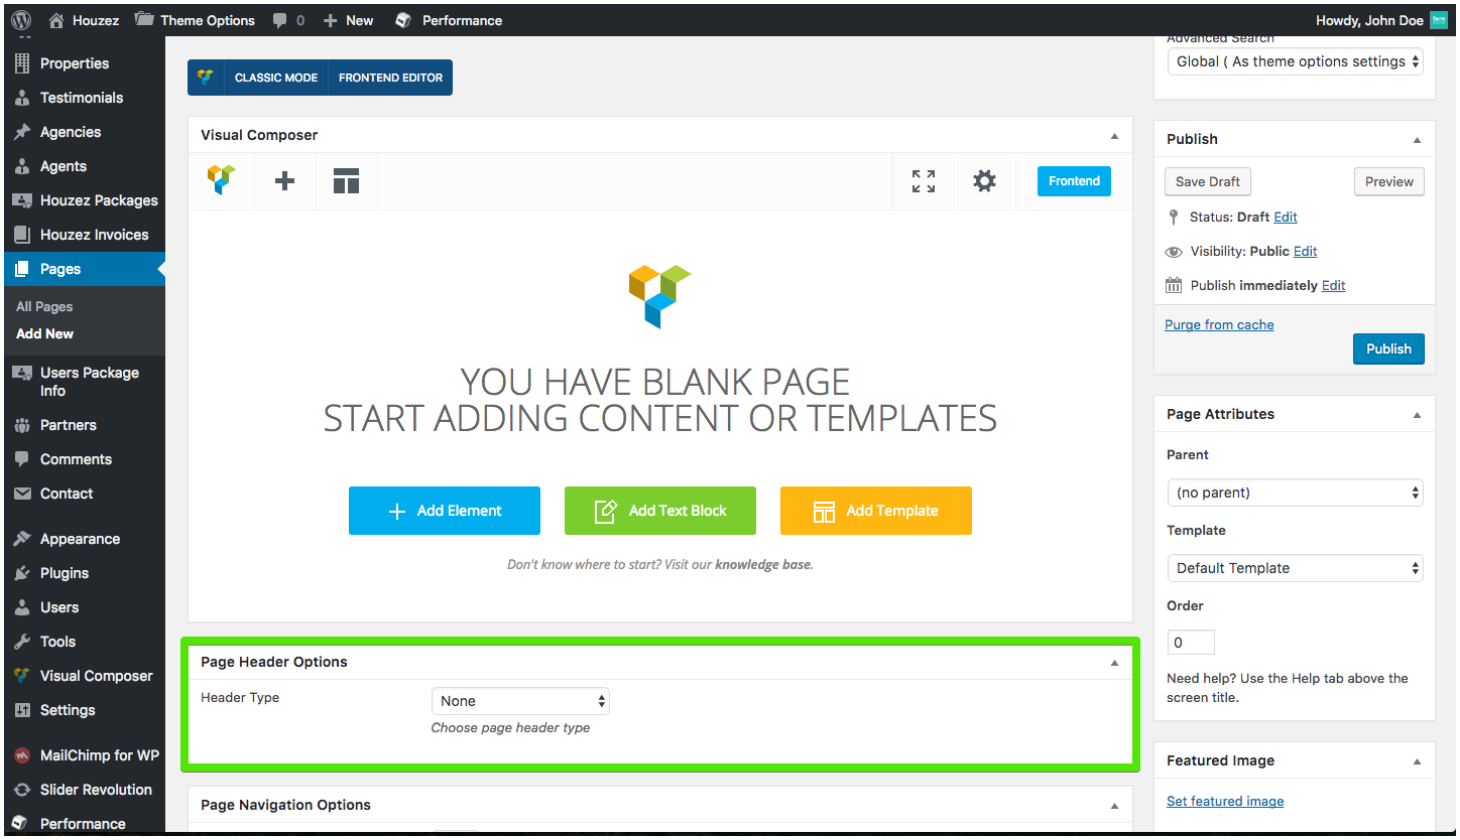


There are two critical steps to creating a static front page on your site with Houzez.

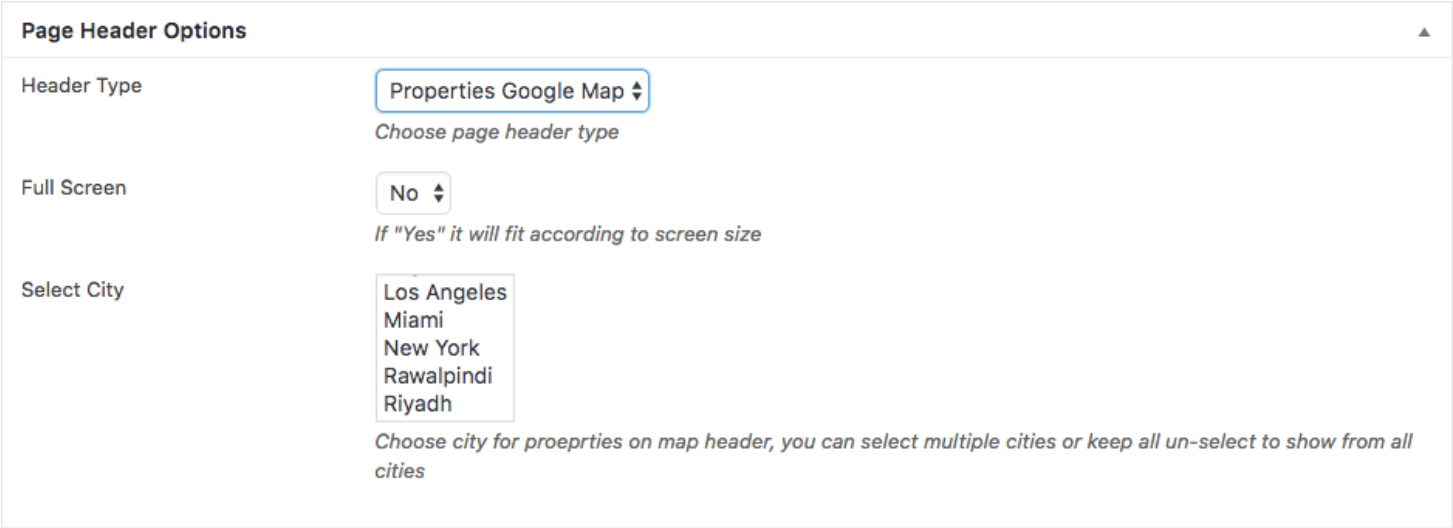
1. create a static page to use as Homepage: **please follow the steps above** in the Create a New Page section to create a static page
2. Once you create the static page navigate to **Settings > Reading** in your admin sidebar
3. **Front page displays:** select “a static page”
4. **Front page:** select the page you previously created (you’ll find your page into the list)
5. **Post page:** select a page you want to use as blog
6. **Blog pages show at most:** choose how many pages
7. **Syndication feeds show the most recent:** choose how many feeds
8. **For each article in a feed:** choose if you want a summary or full text
9. **Search Engine Visibility: if you want to DISCOURAGE you must flag it, if you leave as it is your website will be searched.**
10. Save Changes
11.

14. Pages - Header Options

Houzez allows you to choose from five different Page Headers. Here are different Page Headers to choose from. The section below will describe all of their options and functionalities.



Properties Google Map



1. **Header Type:** Properties Google Map
2. **Fullscreen**: Yes/No (If "Yes" it will fit according to screen size)
3. **Select city**: Choose city for proeprties on map header, you can select multiple cities or keep all un-select to show from all cities

---

Image

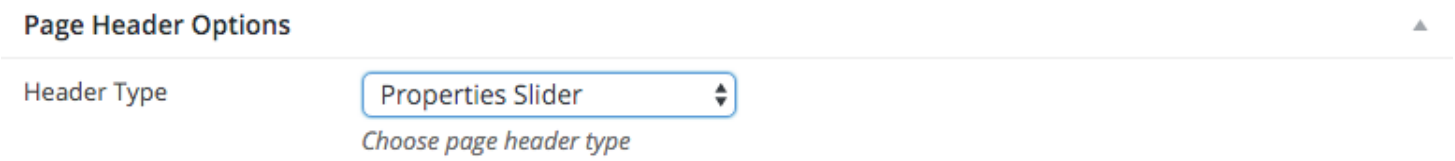
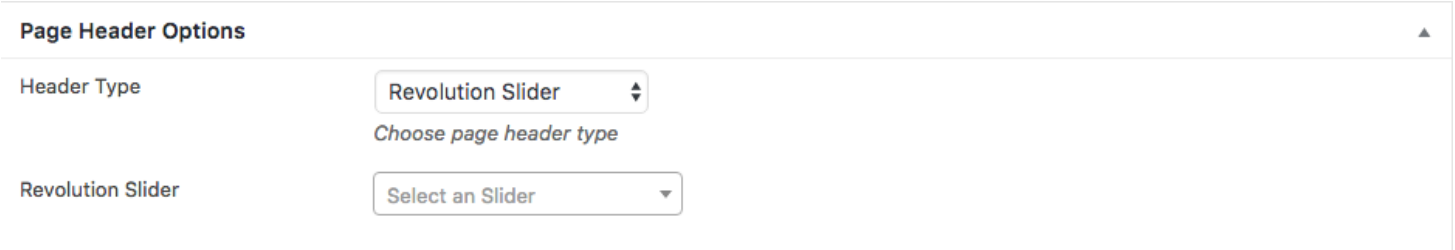
---

Property Slider



1. **Header Type:** Properties Slider

Revolution Slider

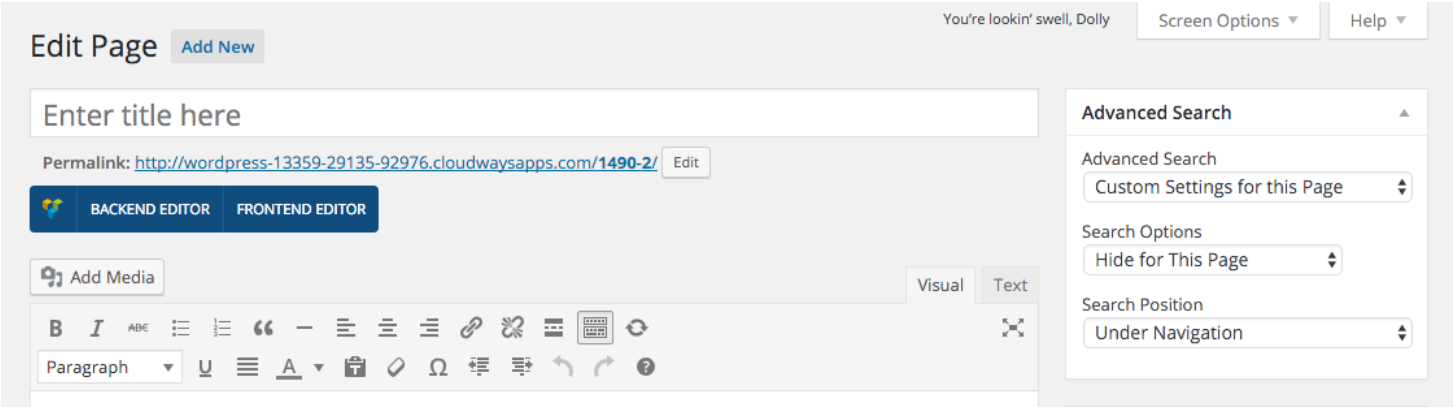


1. **Header Type:** Revolution Slider
2. **Revolution Slider:** select a slider among the ones you have created in Revolution Slider section of your admin panel.

15. Pages - Search Options

You can use this settings to overwrite the global Search setting you have in Theme Options. In this way you can customize the Search bar in each page.

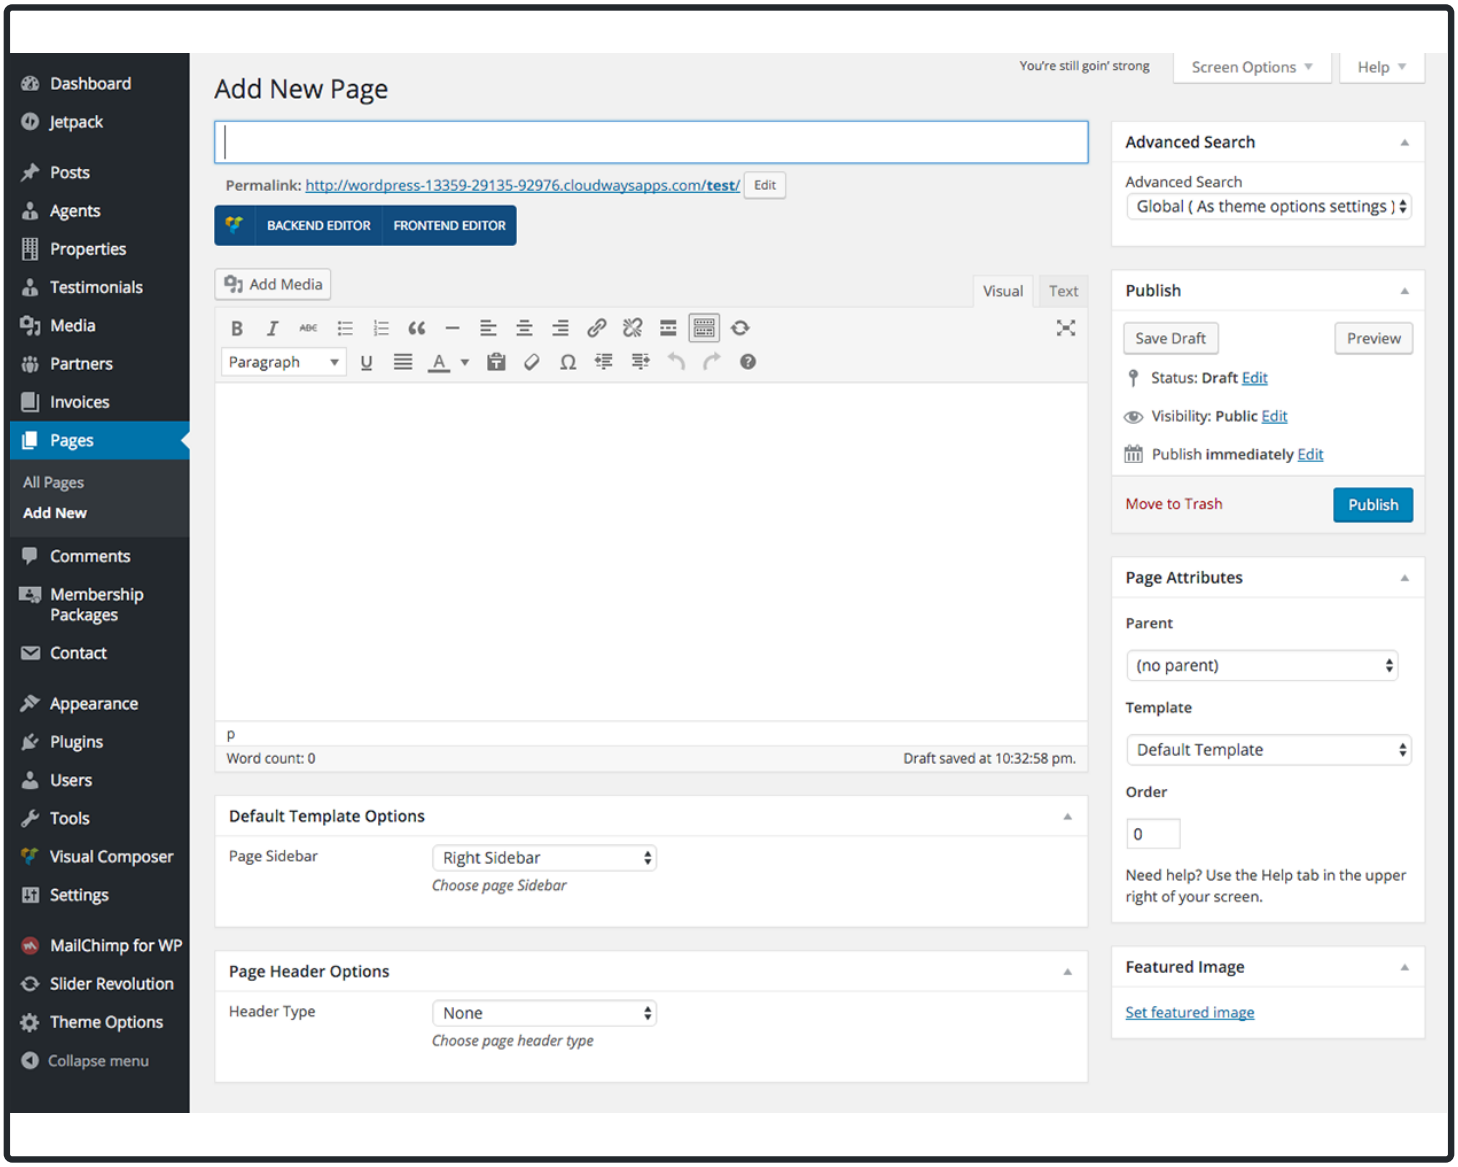
Advanced Search



1. **Advanced Search:** choose from Global (as Theme Options settings) to Custom Settings for this page
2. **Search Options:** choose from Hide for this page, Show for this page, Hide but show on scroll.
3. **Search Position:** choose from Under NAvigation or Under Banners (Sliders, Map, etc...)

If needed Houzez give you the possibility to create a Splash Page. The Splash Page is a static page of a Web site that the user sees first before being given the option to continue to the main content of the site. With Houzez you can create only one splash page and will have many options you can setup throught the Theme Options panel. Let's see how.

16. Pages - How to Create a Splash Page



1. Navigate to **Pages** in your admin sidebar and click **Add New** option.
2. Input a new name for your page, then find the Page Attributes box on right side.
3. **Page Attributes:**
    1. Set your Parent page. It’s usually set to No Parent.
    2. Set your page template from the Template dropdown list. To create a Splash Page please

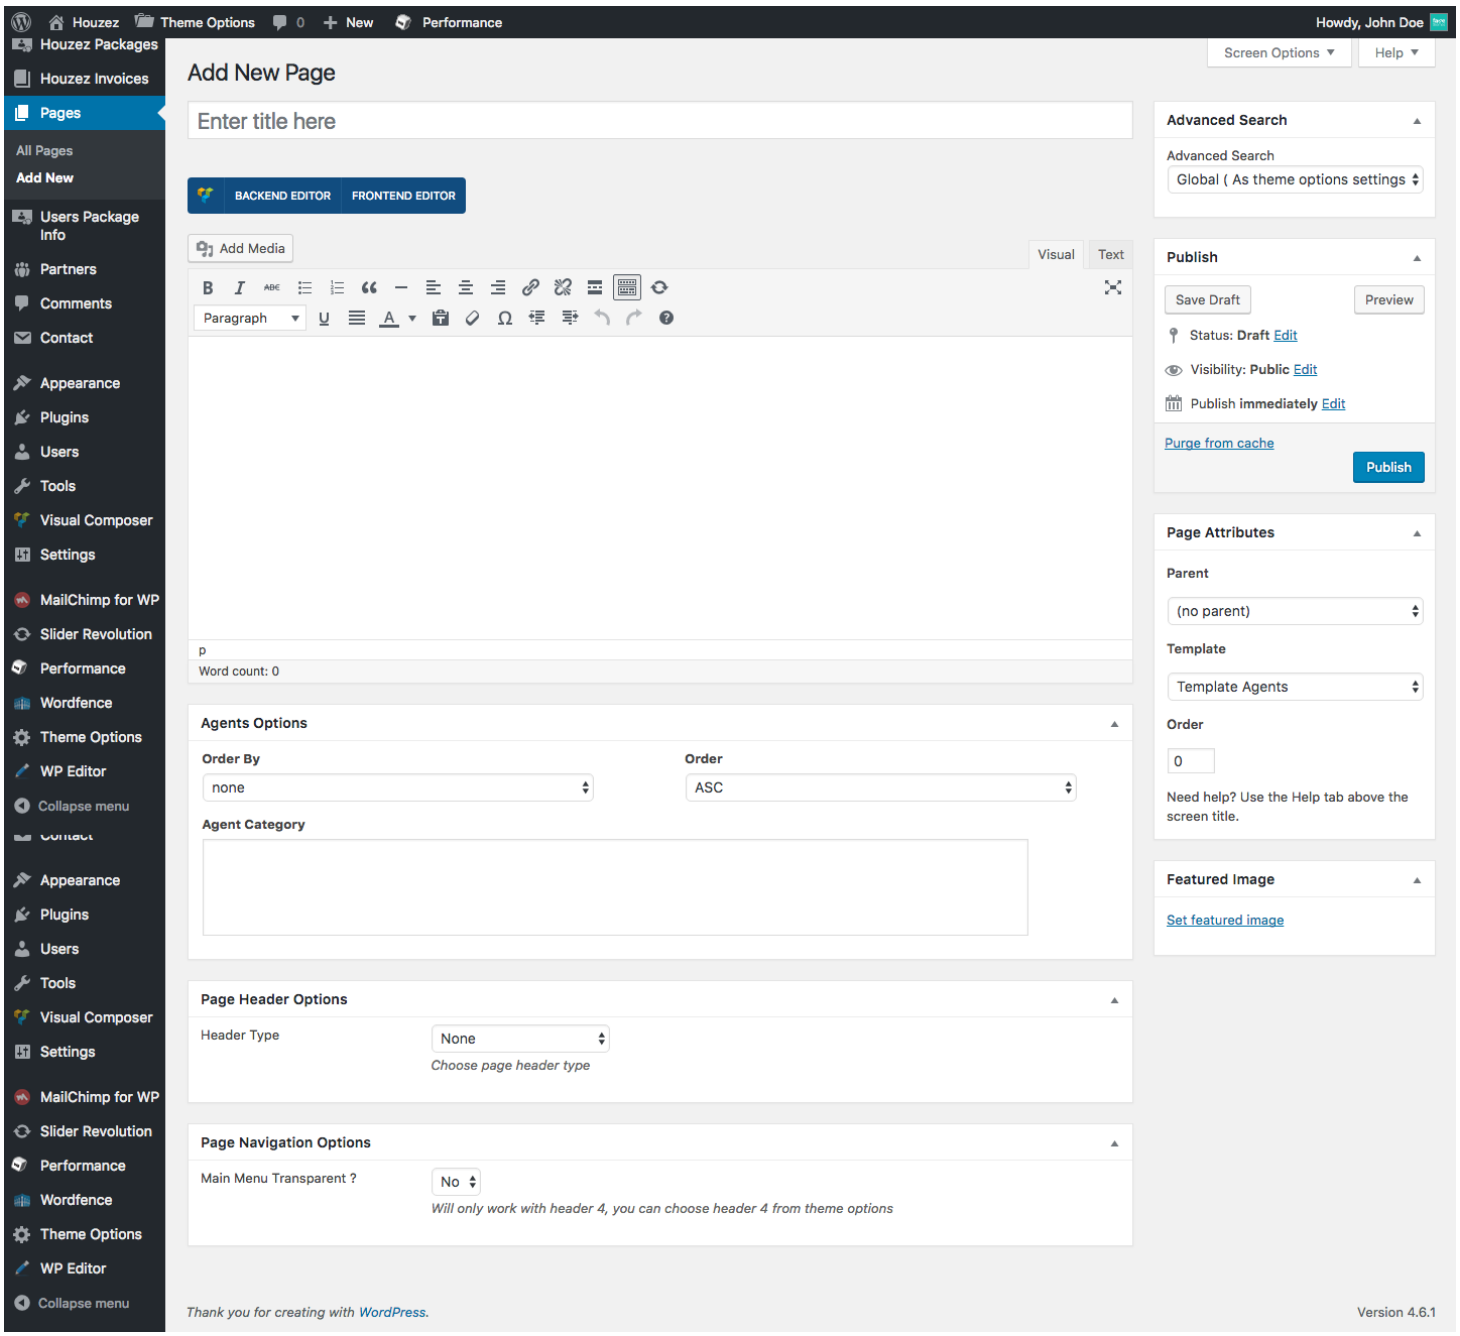
select > **Splash Page Template**

4. Publish the page

17. Pages - Agents Archive Page

The Agents Page is a section where you will be able to display all the Agents registerd in your website. To know how to create an Agent, please refer to the section How to create a new agent.

How to Create an Agents Archive Page

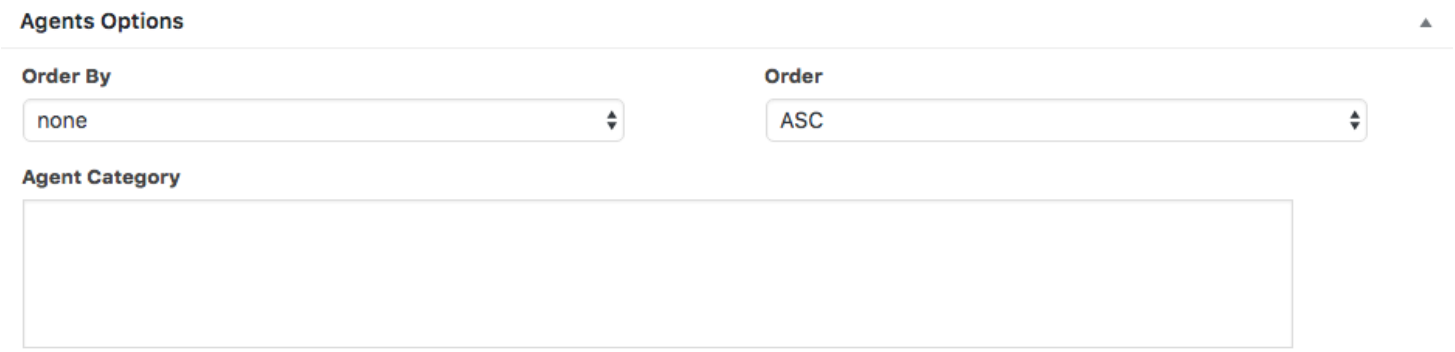


1. Navigate to **Pages** in your admin sidebar and click **Add New** option.
2. Input a new name for your page, then find the Page Attributes box on right side.
3. **Page Attributes:**
    1. Set your Parent page. It’s usually set to No Parent.
    2. Set your page template from the Template dropdown list. To create a Agents Archive Page please select > **Template Agent**

4. Publish the page

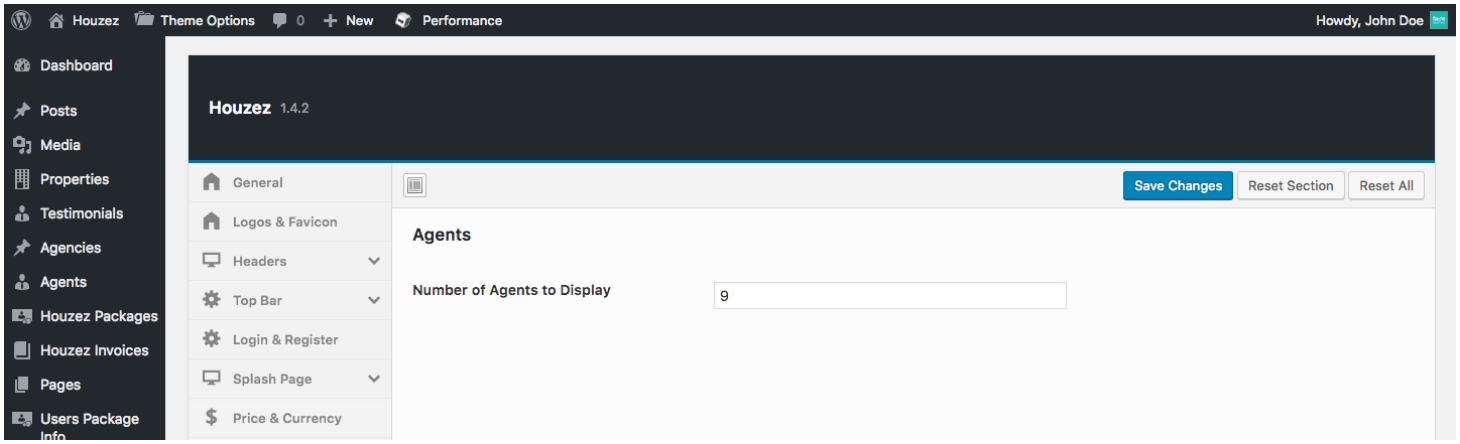
Agents Options

Using this panel you have additional options to sort your agents



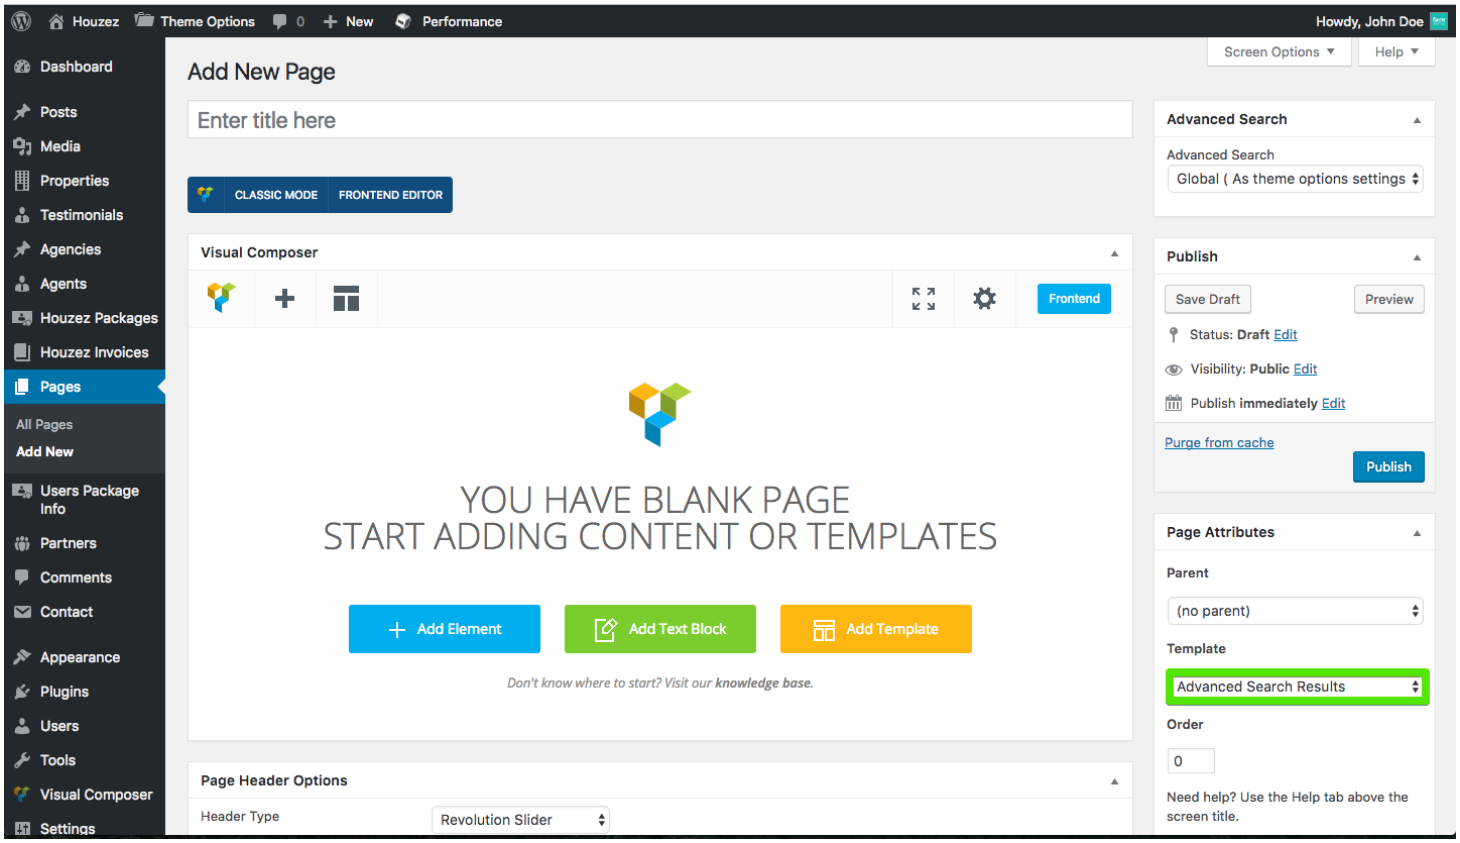
Agents Archive page options

1. Navigate to **Theme Options > Agents**
2. **Number of Agents to Display:** Enter the number of Agnets you want to display in the Agents Archive page



18. Search Results Page - Advanced Search

The results page is a crucial piece of the search experience and it display all search results your visitors are looking for.

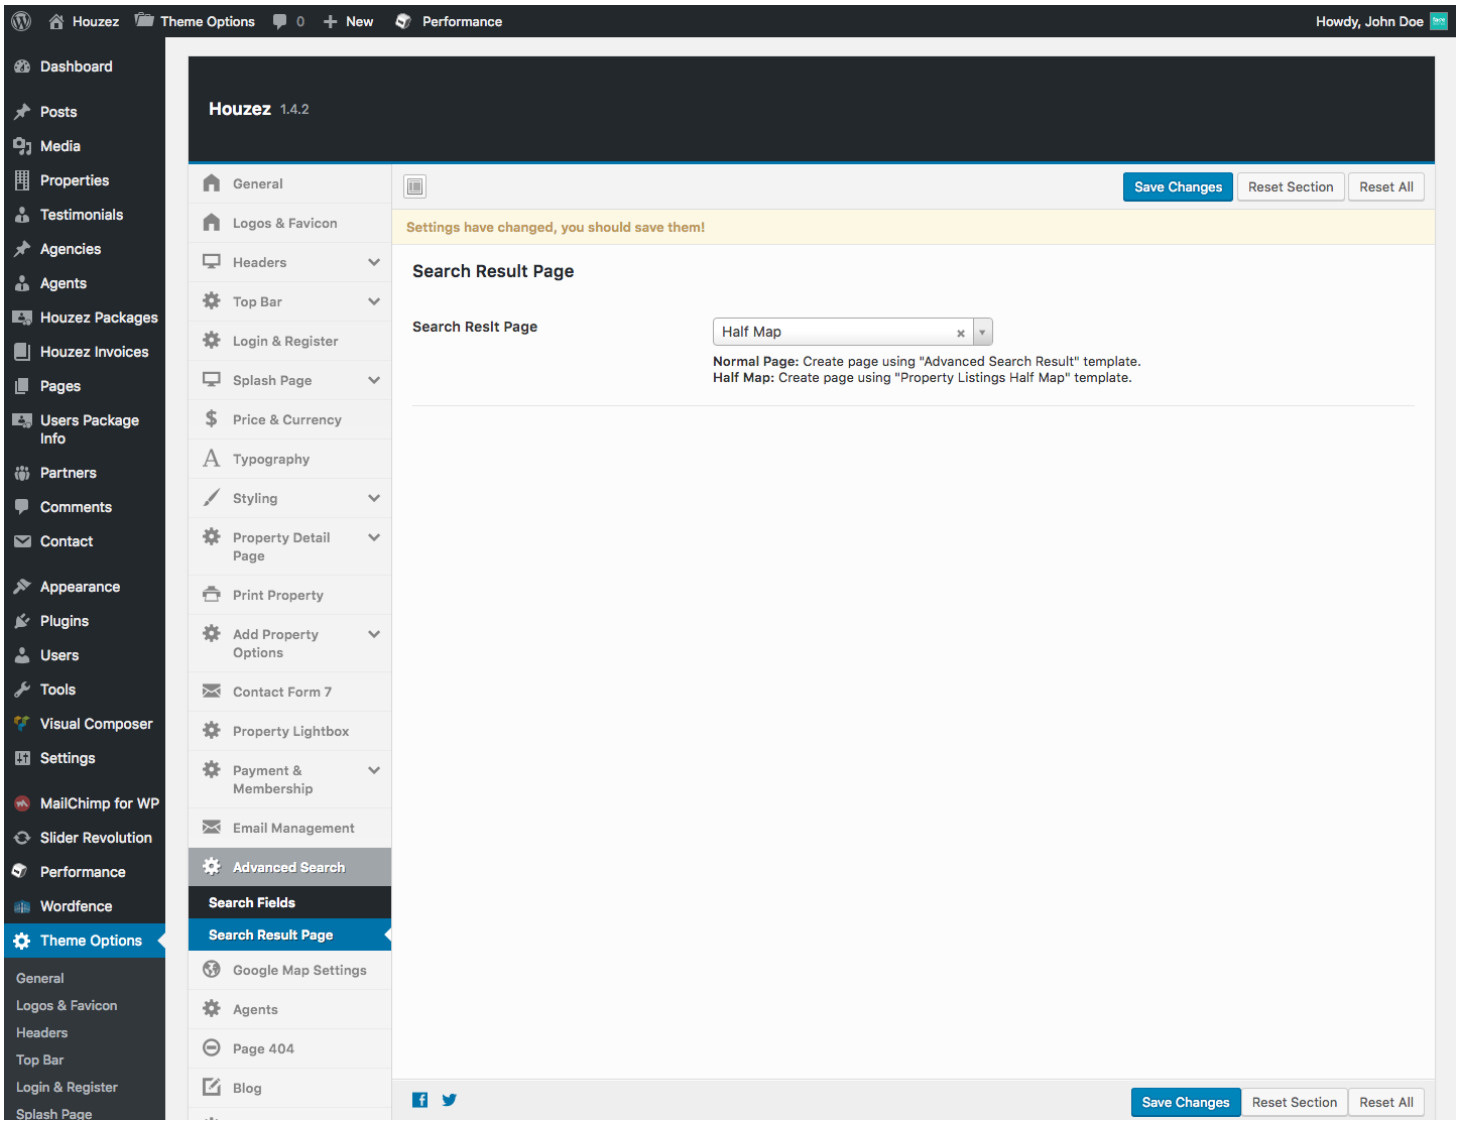


1. Navigate to **Pages** in your admin sidebar and click **Add New** option.
2. Input a new name for your page, then find the **Page Attributes** box on right side.
3. **Page Attributes:**
    1. Set your Parent page. It’s usually set to No Parent.
    2. Set your page template from the Template dropdown list. To create a Advanced Search Results Page please select > **Advanced Search Results**
4. Publish the page

note: if you do not build an Advance Search Result Page your visitors will not get answers for any query/research carried out; this page is critical.

19. Search Results Page - Half Map

First create the Advanced Search Results Page then navigate to Theme Options > Advanced Search > Search Result Page and select this settings



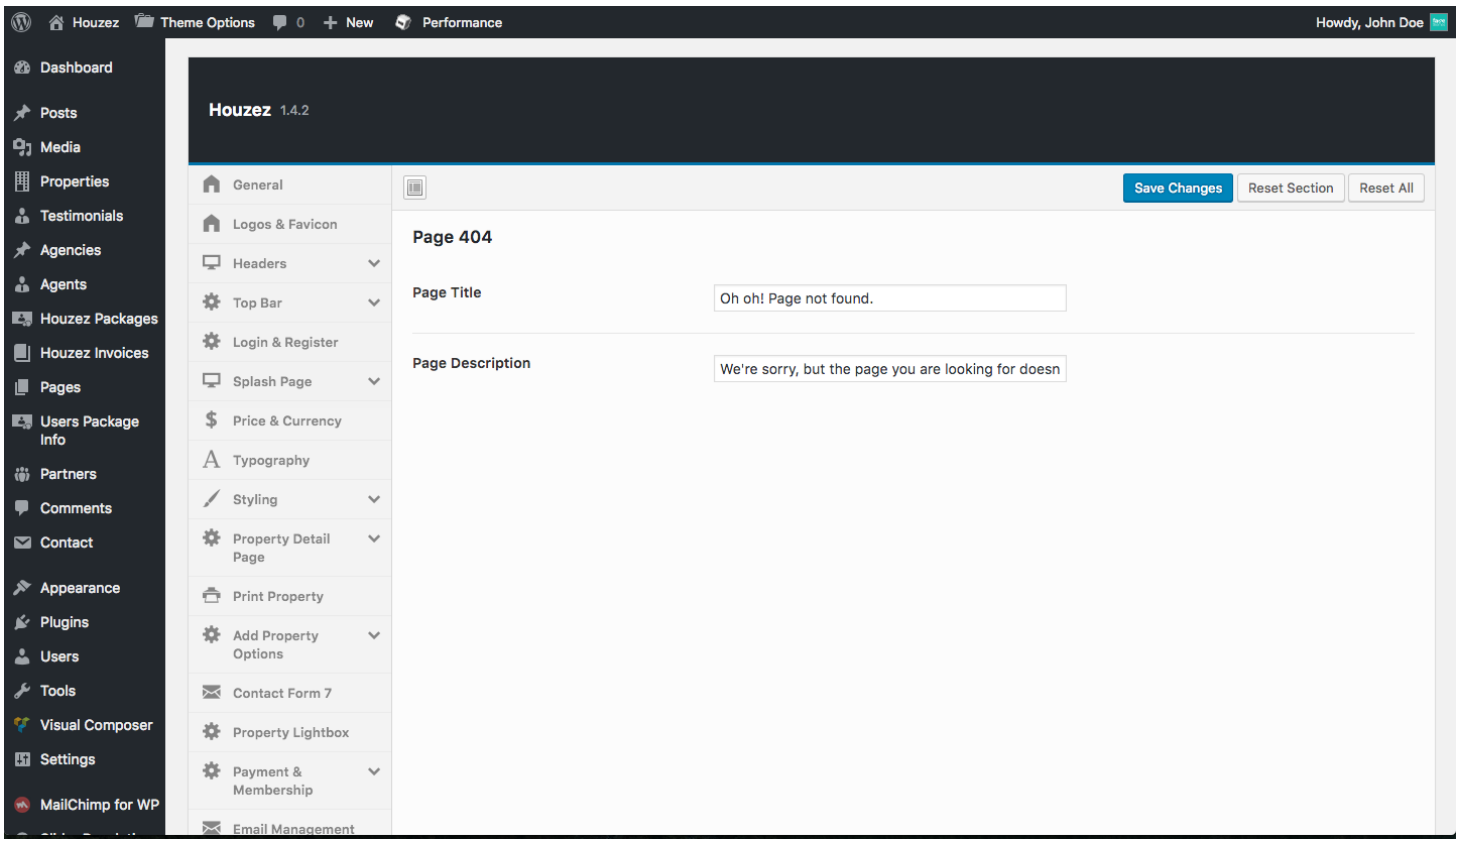
Note: if you do not build an Advance Search Result Page your visitors will not get answers for any query/research carried out; this page is critical.

20. Pages - 404 Page

If you're working on how to start a blog or website, don't forget the all-important 404 page – a standard response code in HTTP telling the user, in effect, that they've clicked on a broken link.

If you're working on how to start a blog or website, don't forget the all-important 404 page – a standard response code in HTTP telling the user, in effect, that they've clicked on a broken link.

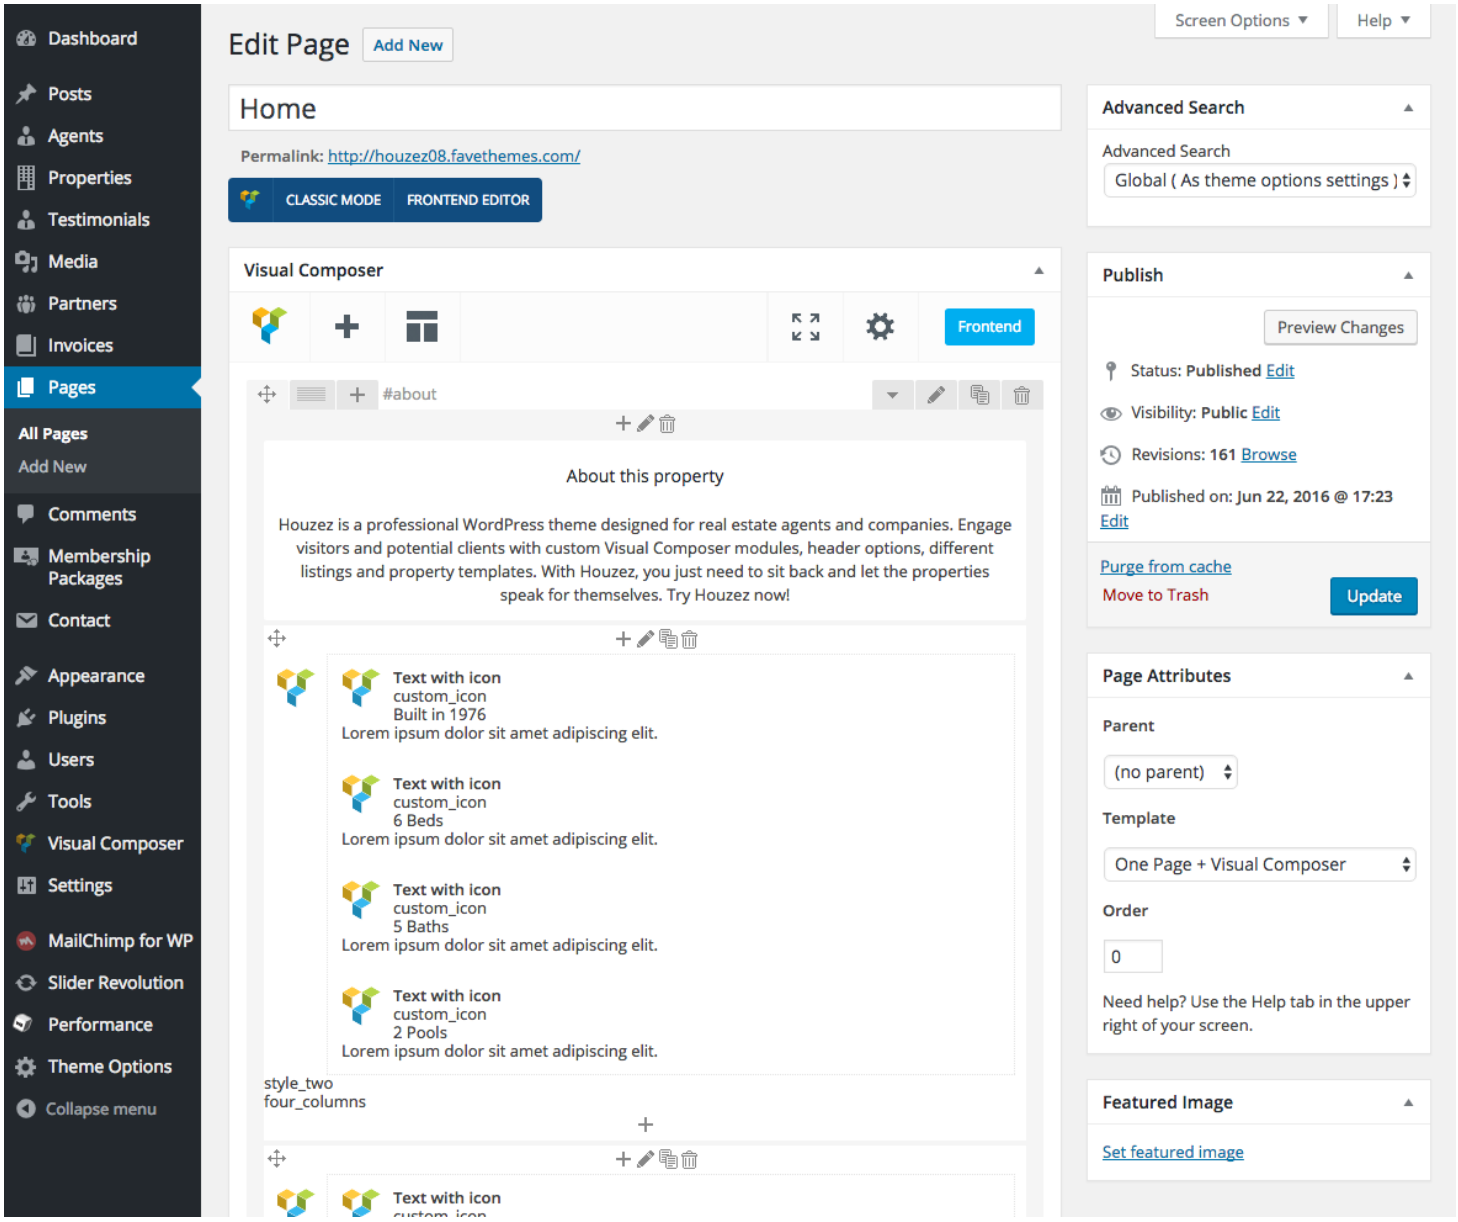
404 Page settings



1. Navigate to **Theme Options > 404 Page**
2. **Page Title:** Insert the title text you want to show in the 404 page
3. **Page Description:** write a short description/message to your user that are falled in a broken link

21. Pages - One Page Website

Single page designs can be an excellent technique for tackling smaller websites, even those that you might not think could ever be done without multiple pages. You can see a live example at this link http://houzez08.favethemes.com/



1. Navigate to **Pages** in your admin sidebar and click **Add New** option.

2. Input a new name for your page, then find the **Page Attributes** box on right side.
3. **Page Attributes:**

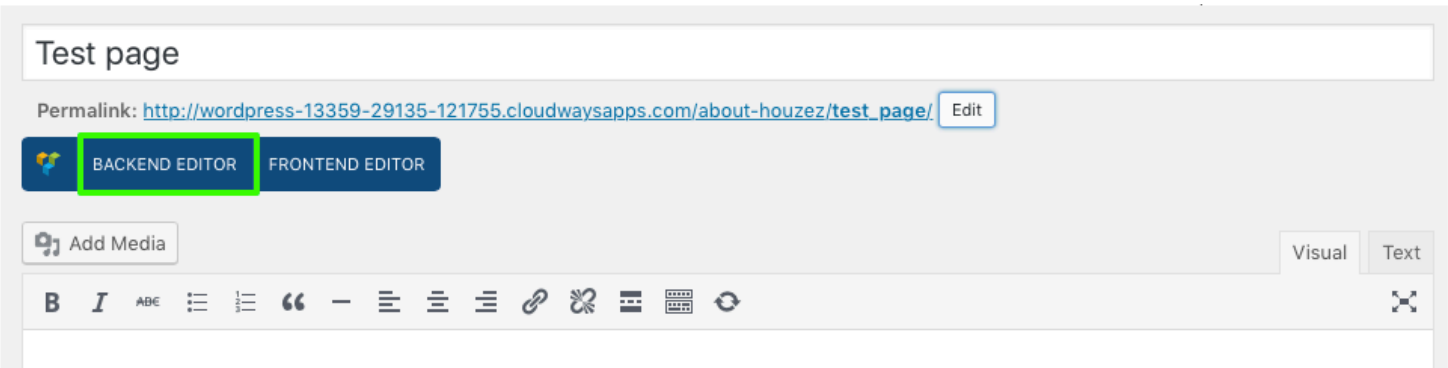
    1. Set your Parent page. It’s usually set to No Parent.

    2. Set your page template from the Template dropdown list. To create a One Page website please select > **One Page + Visual Composer**

4. Publish the page

5. Then click on **Backend Editor** just above your WP classic visual editor

At this time you can start designing your page using the Visual Composer tool: it’s an intuitive tool you just need to **pick, drop and customize** your page sections.



Note: Each section of your website need to be inside one unique row of Visual Composer. Example: First row > Home section. Second row > About section, etc

After you have designed your page using Visual Composer, you have to assign a unique ID to eache main ROW as shown in the following image.

1. Click on the pen icon
2. In the Row ID field add your unique ID word as in the image displayed below. Repeat this for all rows.

Row Settings

General | Design Options

0px

Select gap between columns in row.

Full height row?

☐ Yes

If checked row will be set to full height.

Equal height

☐ Yes

If checked columns will be set to equal height.

Content position

Default

Select content position within columns.

Use video background?

☐ Yes

If checked, video will be used as row background.

Parallax

None

Add parallax type background for row (Note: If no image is specified, parallax will use background image from Design Options).

Row ID

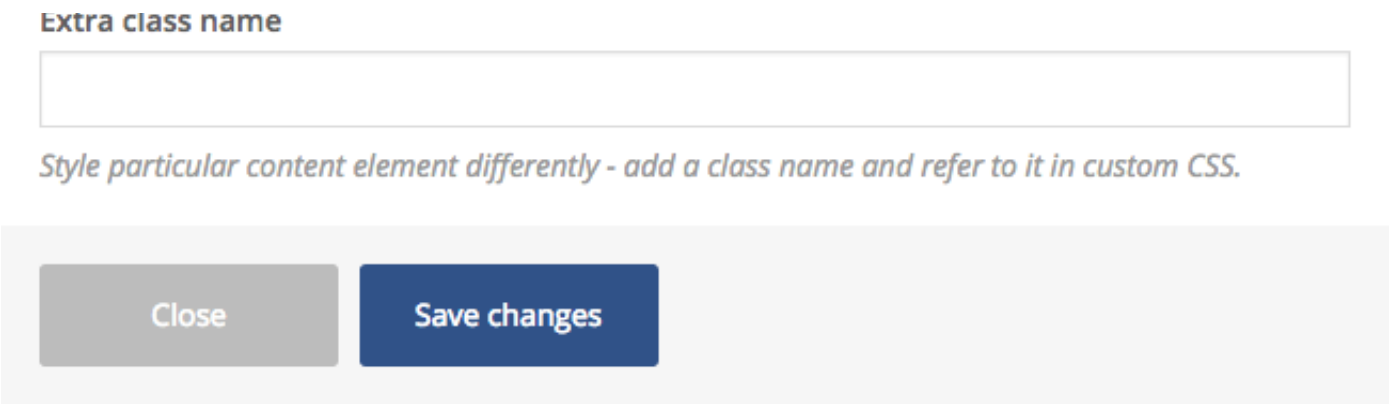
about

Enter row ID (Note: make sure it is unique and valid according to w3c specification).

Disable row

☐ Yes

If checked the row won't be visible on the public side of your website. You can switch it back any time.



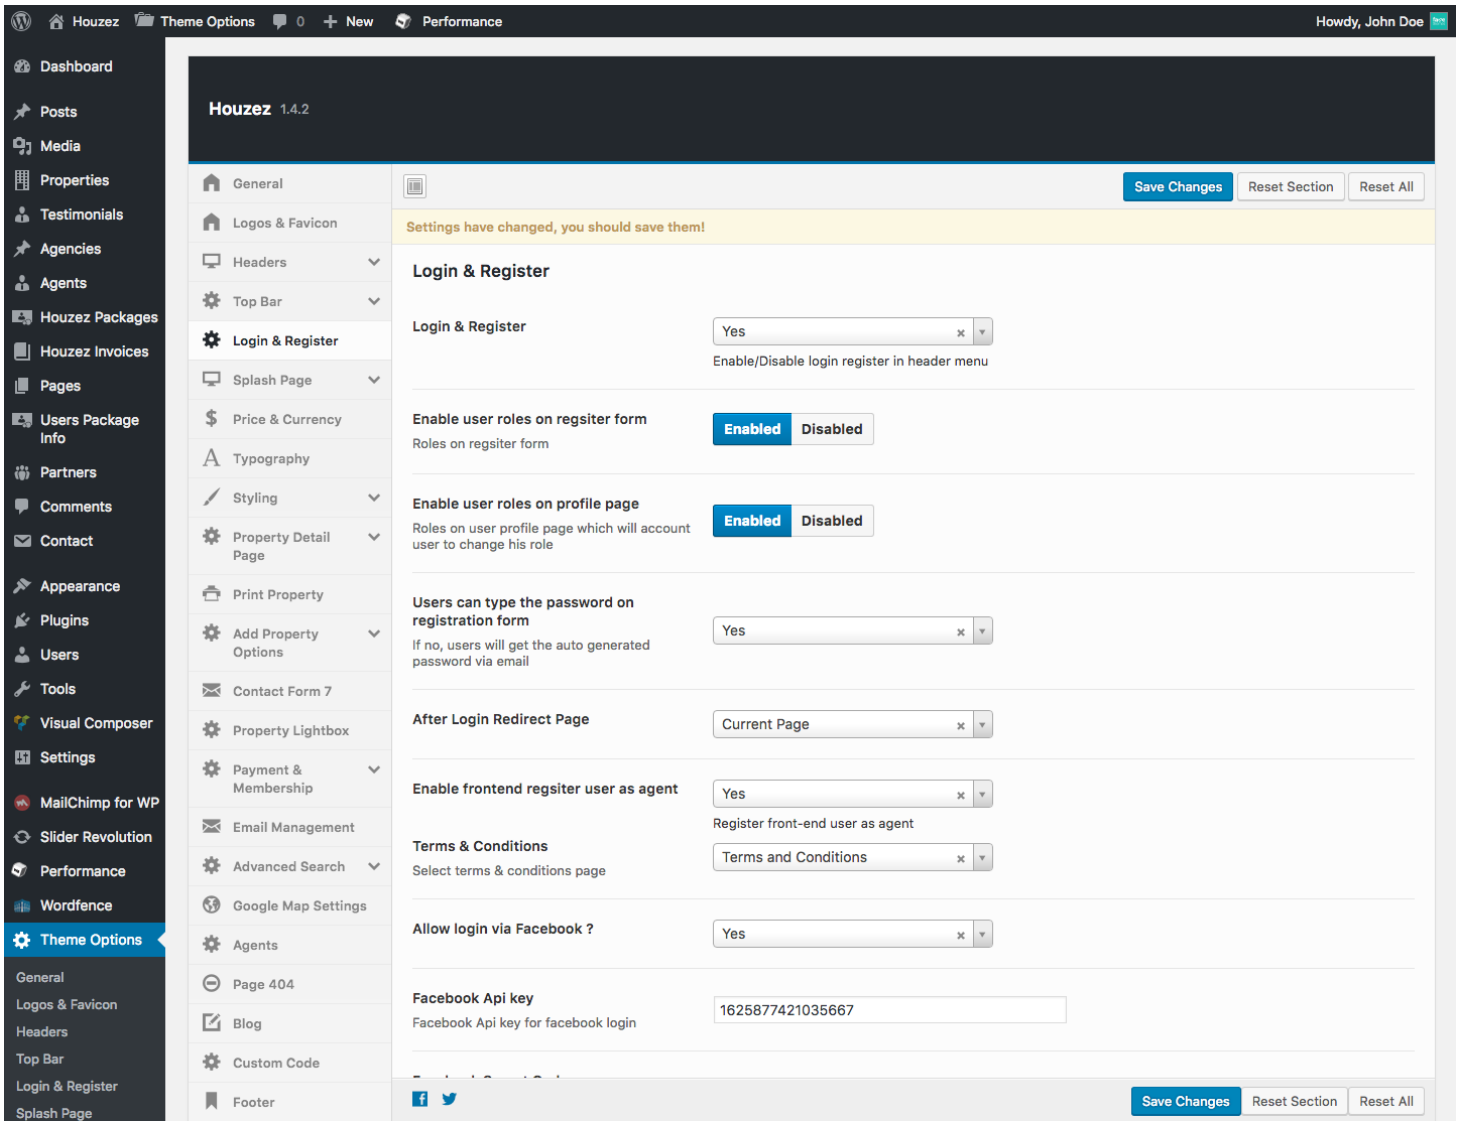
How to Setup The One Page Website Navigation

1. Navigate to **Apparence > Menus** section of your admin sidebar.
2. Click the **Create A New Menu** link to make a new menu. Enter the name then click the **Create Menu button**
3. To add a menu item for One Page Website, use the **Custom Links** to add a new link on menu
4. In the URL field add the row ID you previously added in Visual Composer. Example: If you added in Visual Composer Row ID > about, in URL field add in this way **#about**
5. In the field **LInk Text** add the name of you menu link. Example: About
6. Click on **Add to Menu**
7. Repeat the same procedure for all you menu links following the ID sections you have added in Visual Composer Row ID
8. **Save menu**

22. Membership and Pay Per Listing

Houzez allows a complete customization. We have provided the theme a number of features tailored to your needs also in terms of users management, user access and experience, payments and more. Follow instructions to set Houzez.

Login & Register



1. Go to Theme Option > **Login & Register**
2. **Login & Register**: Enable/Disable login register in header menu
3. **Users can type the password on registration form**: If no, users will get the auto generated password via email

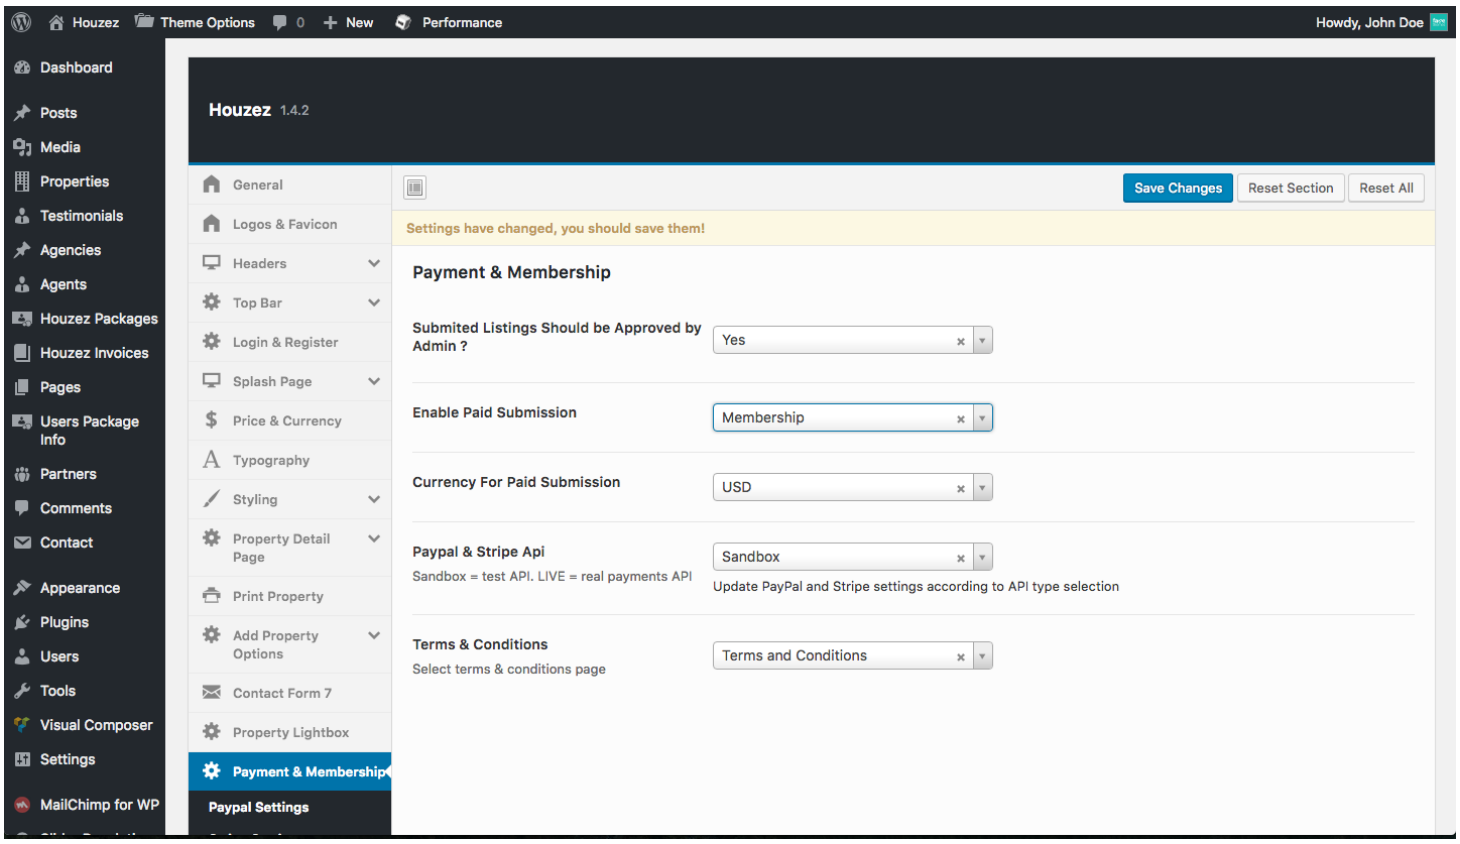
13. **Google OAuth Client ID**: enter Google oAuth client id for google login
14. **Google Client Secret**: enter Google client secret code for google login
15. Save Changes

Payment & Membership

How Membership Works

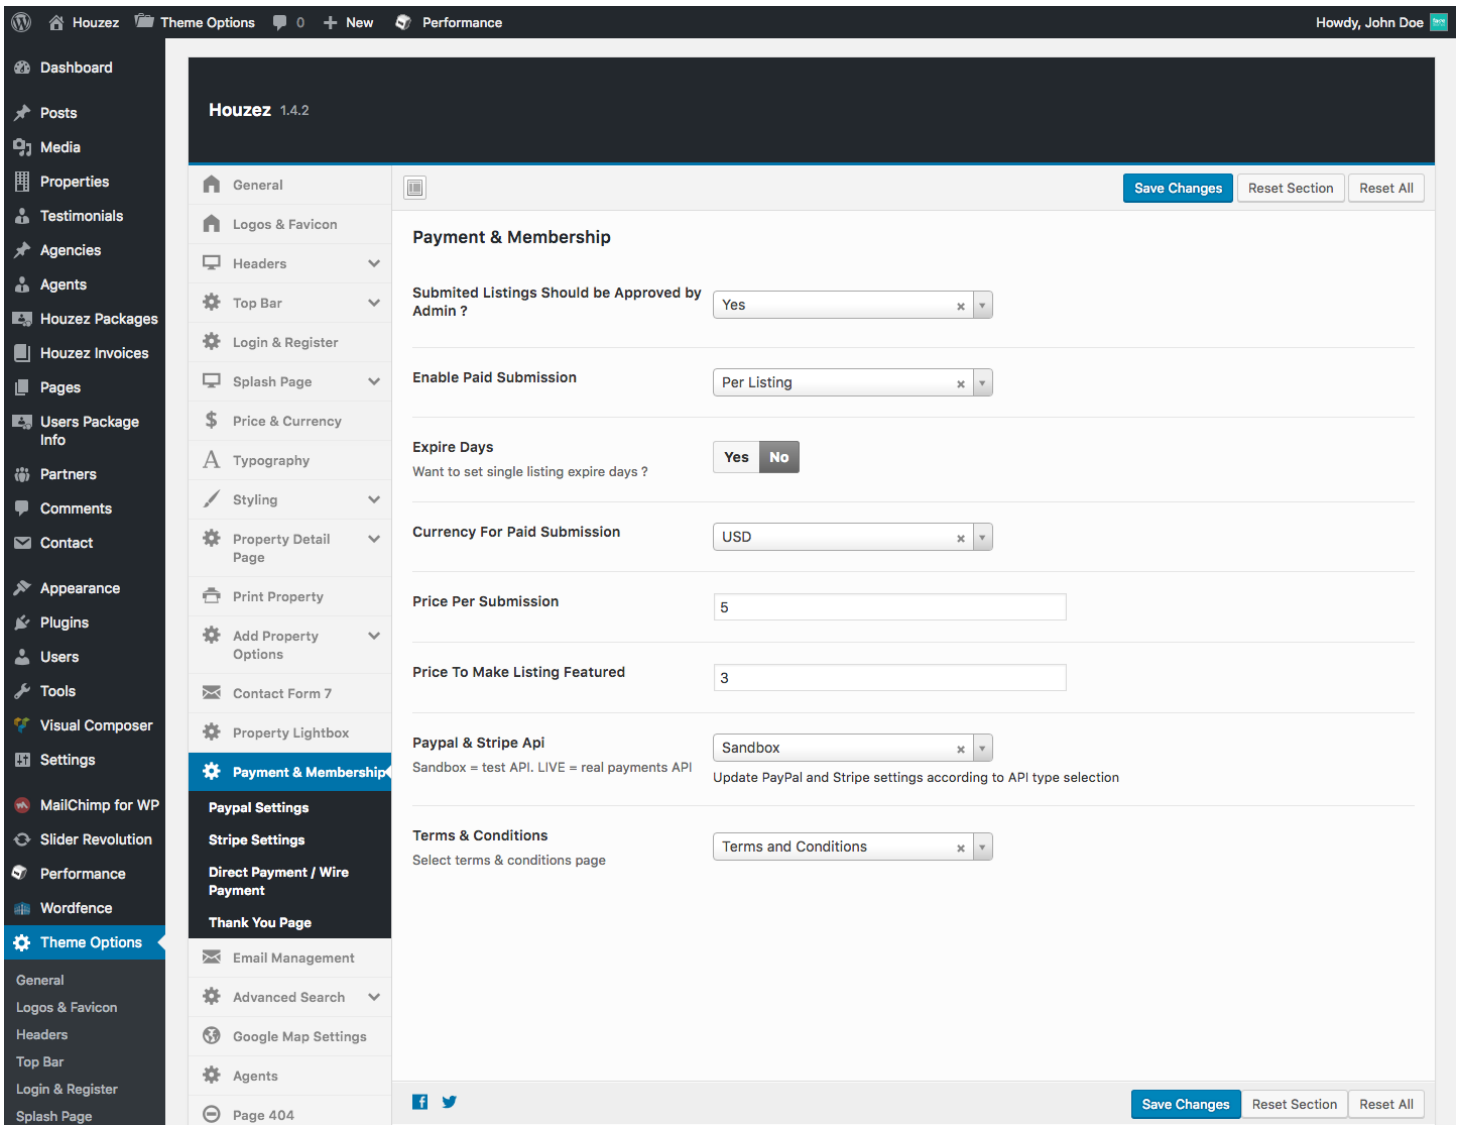
With Houzez you can configure it to have free and/or paid memberships on your site. Basically the membership can happen in two ways.

In general you can decide which users have to pay for every listing they do, or you can create some memebrship packages that users can buy. Paid membership payment is handled securely via PayPal. We will see later how to create and manage all the possible options.



1. Go to Theme Options > **Payment & Memebrship**
2. **Submited Listings Should be Approved by Admin?** Choose if Yes or No
3. **Enable Paid Submission**: choose if **Membership**, Per Listing or No (no paid submission/free submission). If you choose “per Listing” or “No” scroll down for further info.
4. **Currency For Paid Submission**: choose currency
5. **Paypal & Stripe Api**: you can choose Sandbox (= test API) or Live (real payments API); Update PayPal and Stripe settings according to API type selection
6. **Terms & Conditions**: Select terms & conditions page
7. Save Changes

Pay Per Listing

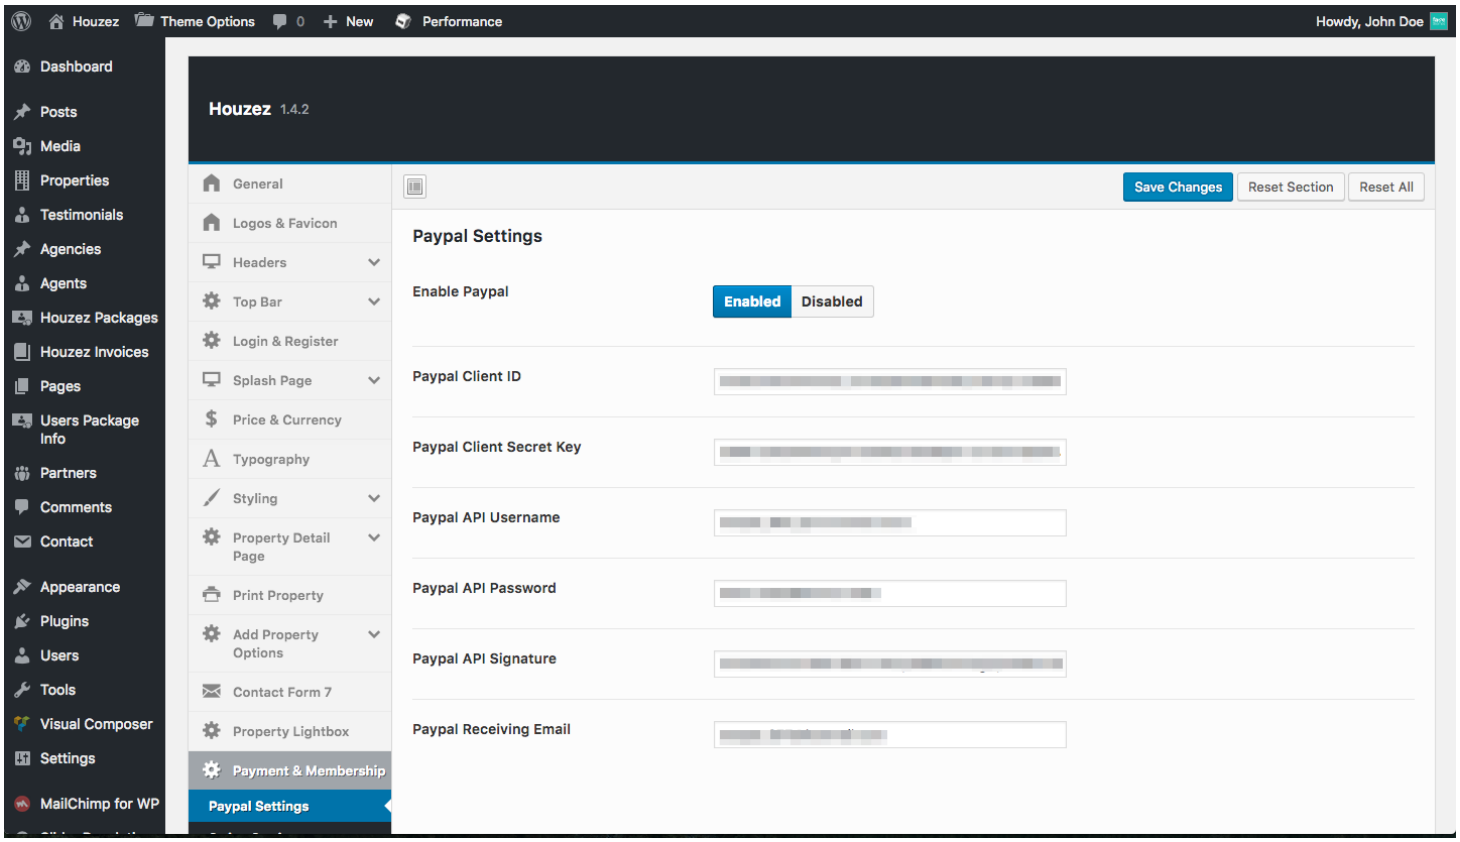


1. Go to Theme Options > **Payment & Memebrship**
2. **Submited Listings Should be Approved by Admin?** Choose if Yes or No
3. **Enable Paid Submission**: choose if Membership, **Per Listing** or No (no paid submission/free submission).
4. **Exipire Days**: choose if you want to set sinlge listing exipire days (Yes or No). If Yes you’ll have to enter the number of days until a listings will expire. Starts from the moment the property is published on the website
5. **Currency For Paid Submission**: choose currency
6. **Price Per Submission**: enter the price for each subission
7. **Price To Make Listing Features**: enter the price for each featured subission

8. **Paypal & Stripe Api**: you can choose Sandbox (= test API) or Live (real payments API); Update PayPal and Stripe settings according to API type selection
9. **Terms & Conditions**: Select terms & conditions page
10. Save Changes

PayPal Settings

PayPal is a service that enables you to accept payments. To enable PayPal payments access your admin panel and navigate to **Theme Options > Payments & Membership > PlayPal Settings.**



1. Go to Theme Options > Payment & Memebrship > **Paypal Settings**
2. **Enable Paypal:** Choose if Enabled or Disabled
3. **Paypal Client ID**: enter Paypal client ID
4. **Paypal Client Secret Key**: enter Paypal Client Secret Key
5. **Paypal API Username**: enter Paypal API Username

6. **Paypal API Password**: enter Paypal API Password
7. **Paypal API Signature**: enter Paypal API Signature
8. **Paypal Receiving Email**: enter Paypal Receiving Email
9. Save Changes

How to get a PayPal API

This video shows step by step how to get a PayPal API for Houzez and use it inside the Theme option panel.

Stripe Settings

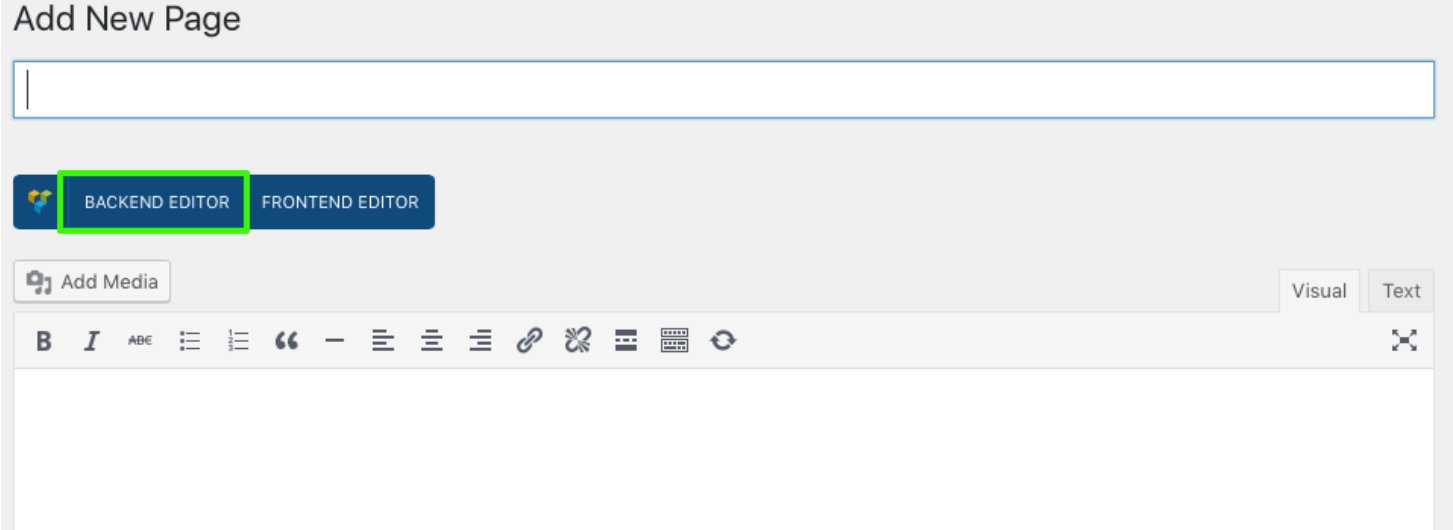
1. Navigate to your admin sidebar **Partner > Add New**
2. **Edit Partner:** in the firsrt row insert the Business Name of the New Partner
3. **Partner Information:** Provide a partner website url
4. Use the **Featured Image** box to upload the partner logo
5. Publish

26. Visual Composer Modules

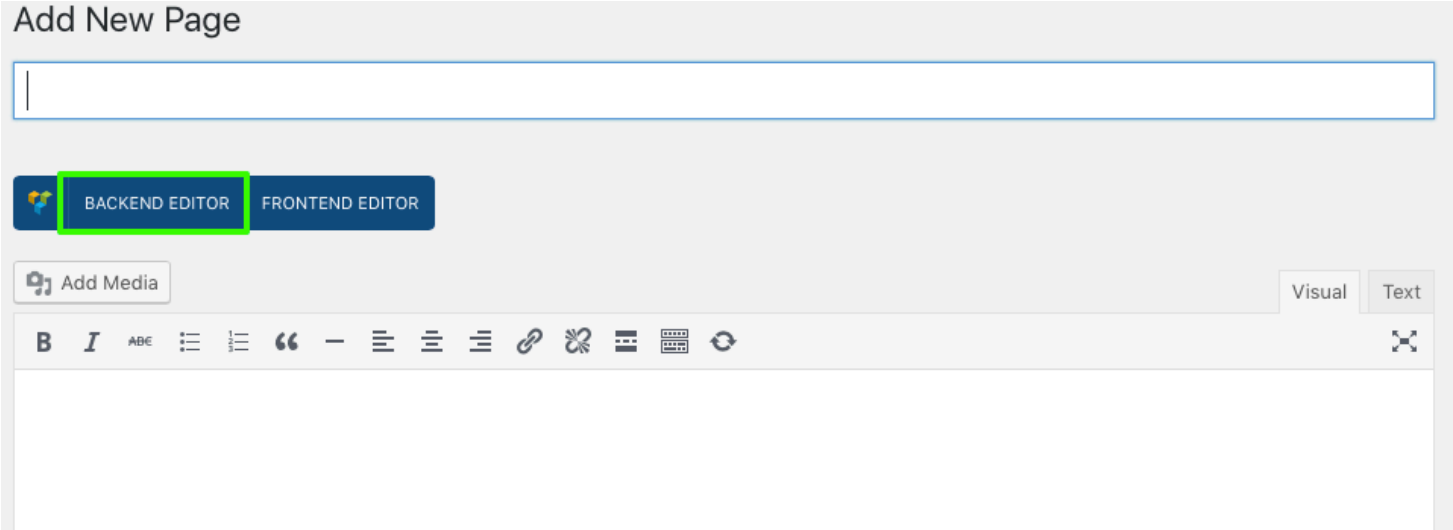
Houzez comes with 18 custom Visual Composer modules. All modules has been designed and developed to build a responsive website and manage your content easily using intuitive WordPress Frontend editor (or Backend Editor). No programming knowledge required: create stunning and beautiful pages with drag and drop editor.

Introduction

Preliminary step: to activate the Visual Composer Editor you have to Click on “Backend Editor” (This is a best pratice but you can use Frontend editor too).



There's one concept/design pattern you should know - in the Visual Composer editor mode you'll have "Add element" button, which you should click to add content block or row to your page. If you are adding row element to your page pay attention that it will automatically add column element within row. You can later add more columns within row and change their behaviour.



Clicking the "**Add element**" button will show the content element selection menu. Content blocks are divided into categories: All (show all), Content, Social, Structure, **By Favethemes**, Deprecated (Elements within this list are deprecated and are no longer supported in newer versions of Visual Composer).

If you need the Visual Composer documentation you can check here.

Visual Composer Custom Modules

Houzez comes with **18 custom Visual Composer modules**. Each of them has been designed with specific functionalities and options. You can see all the custom modules by clicking on the "**By Favethemes**" tab.

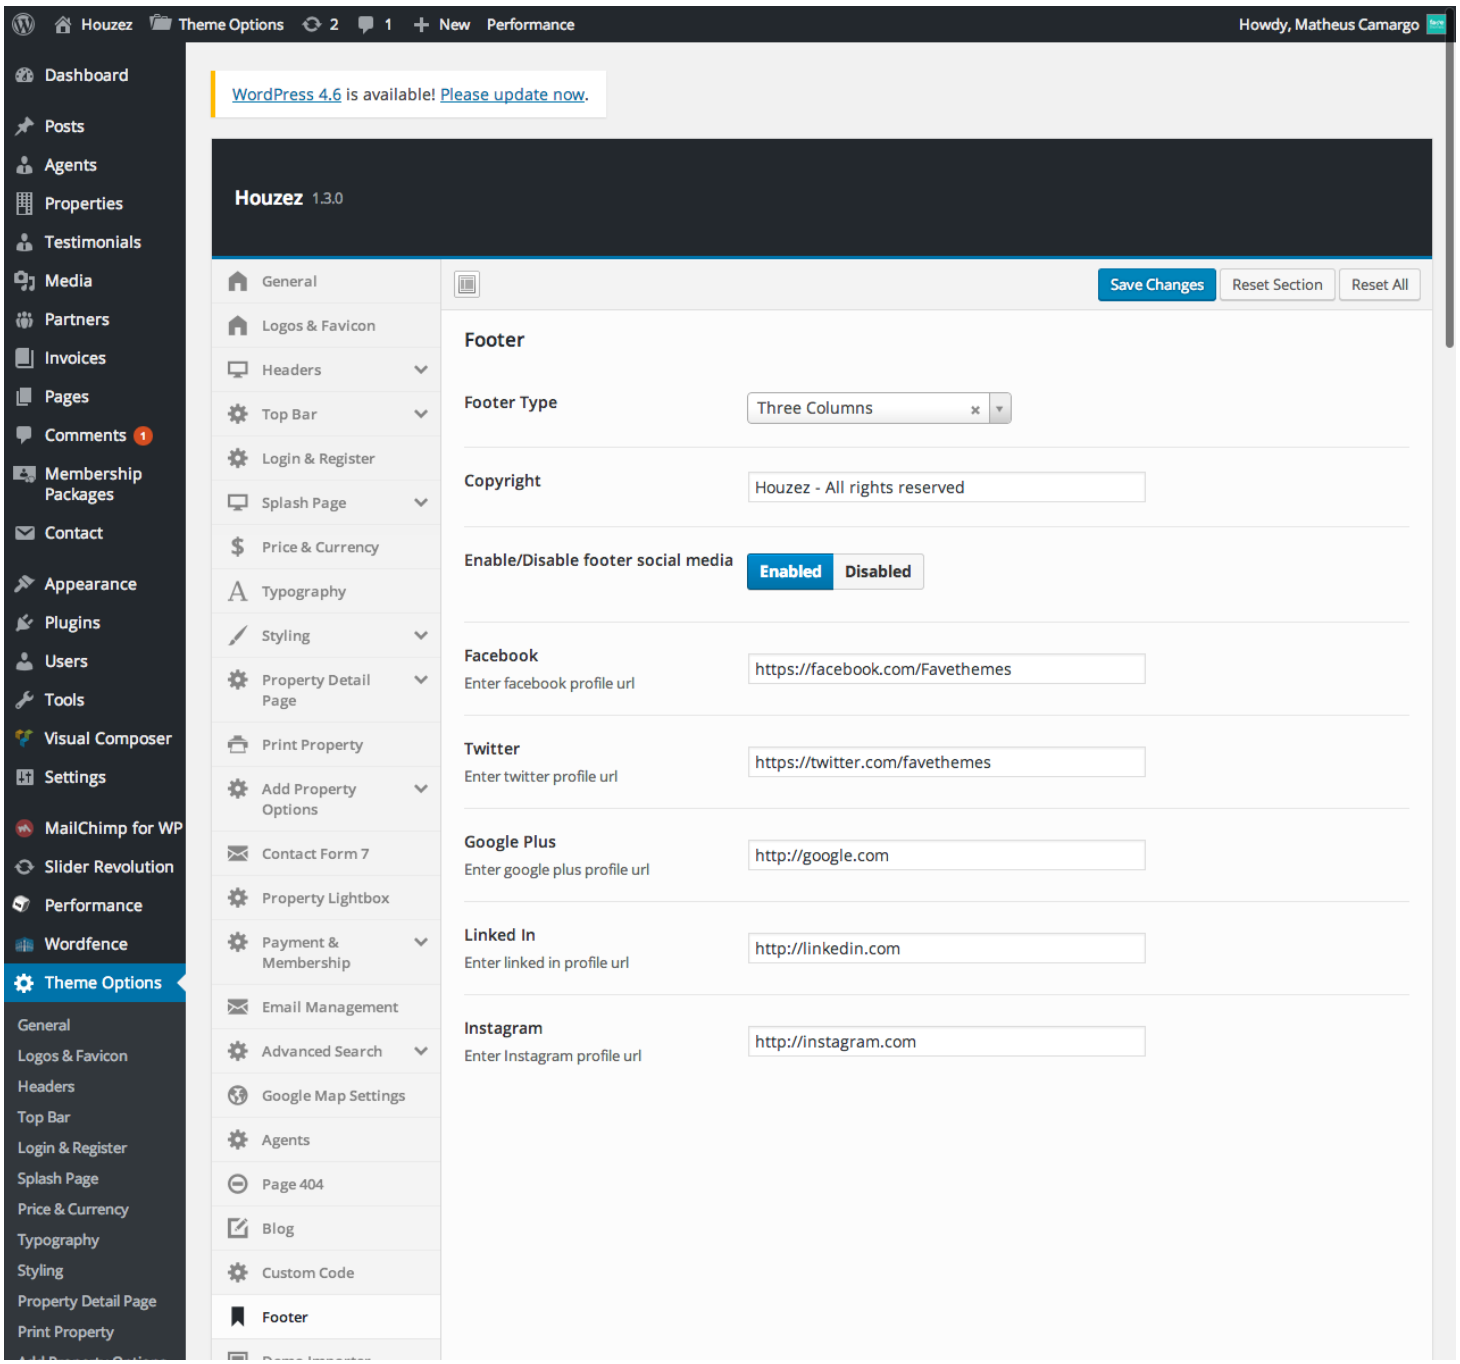
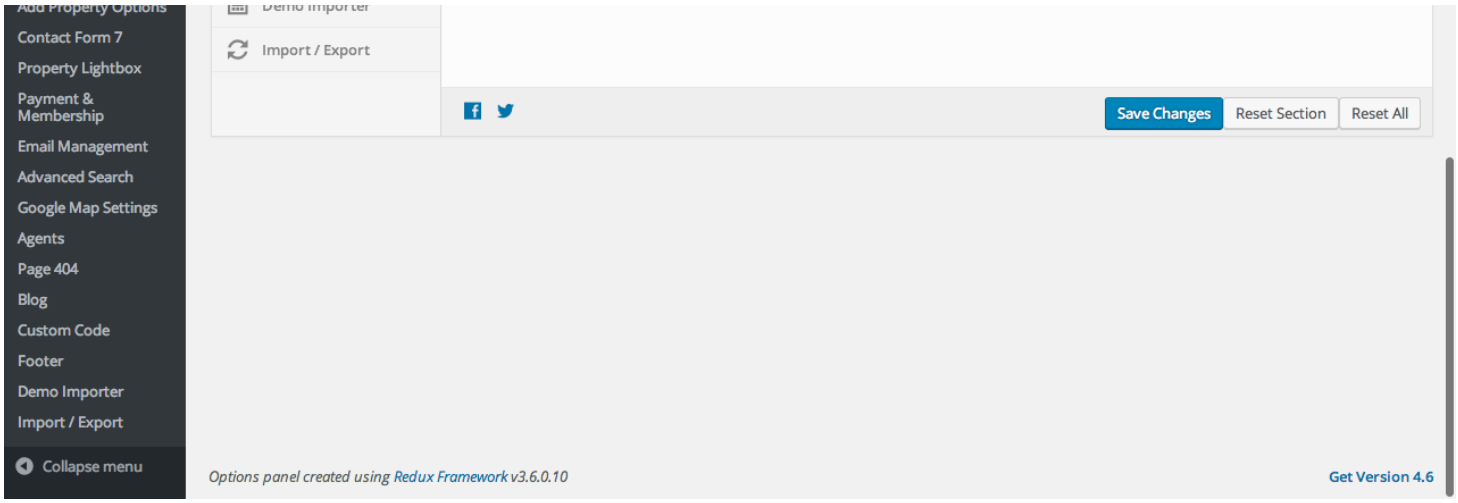
Note 2: It's important not to touch the theme core files because every time we will update the theme, you will loose you changes.

57. Theme Options - Footer

Houzez includes two footer styles that you can customize in various ways. The footer allows you to insert various widgets, social icons, copyright text, and much more. Footer widgets are added in the widget section of your admin.



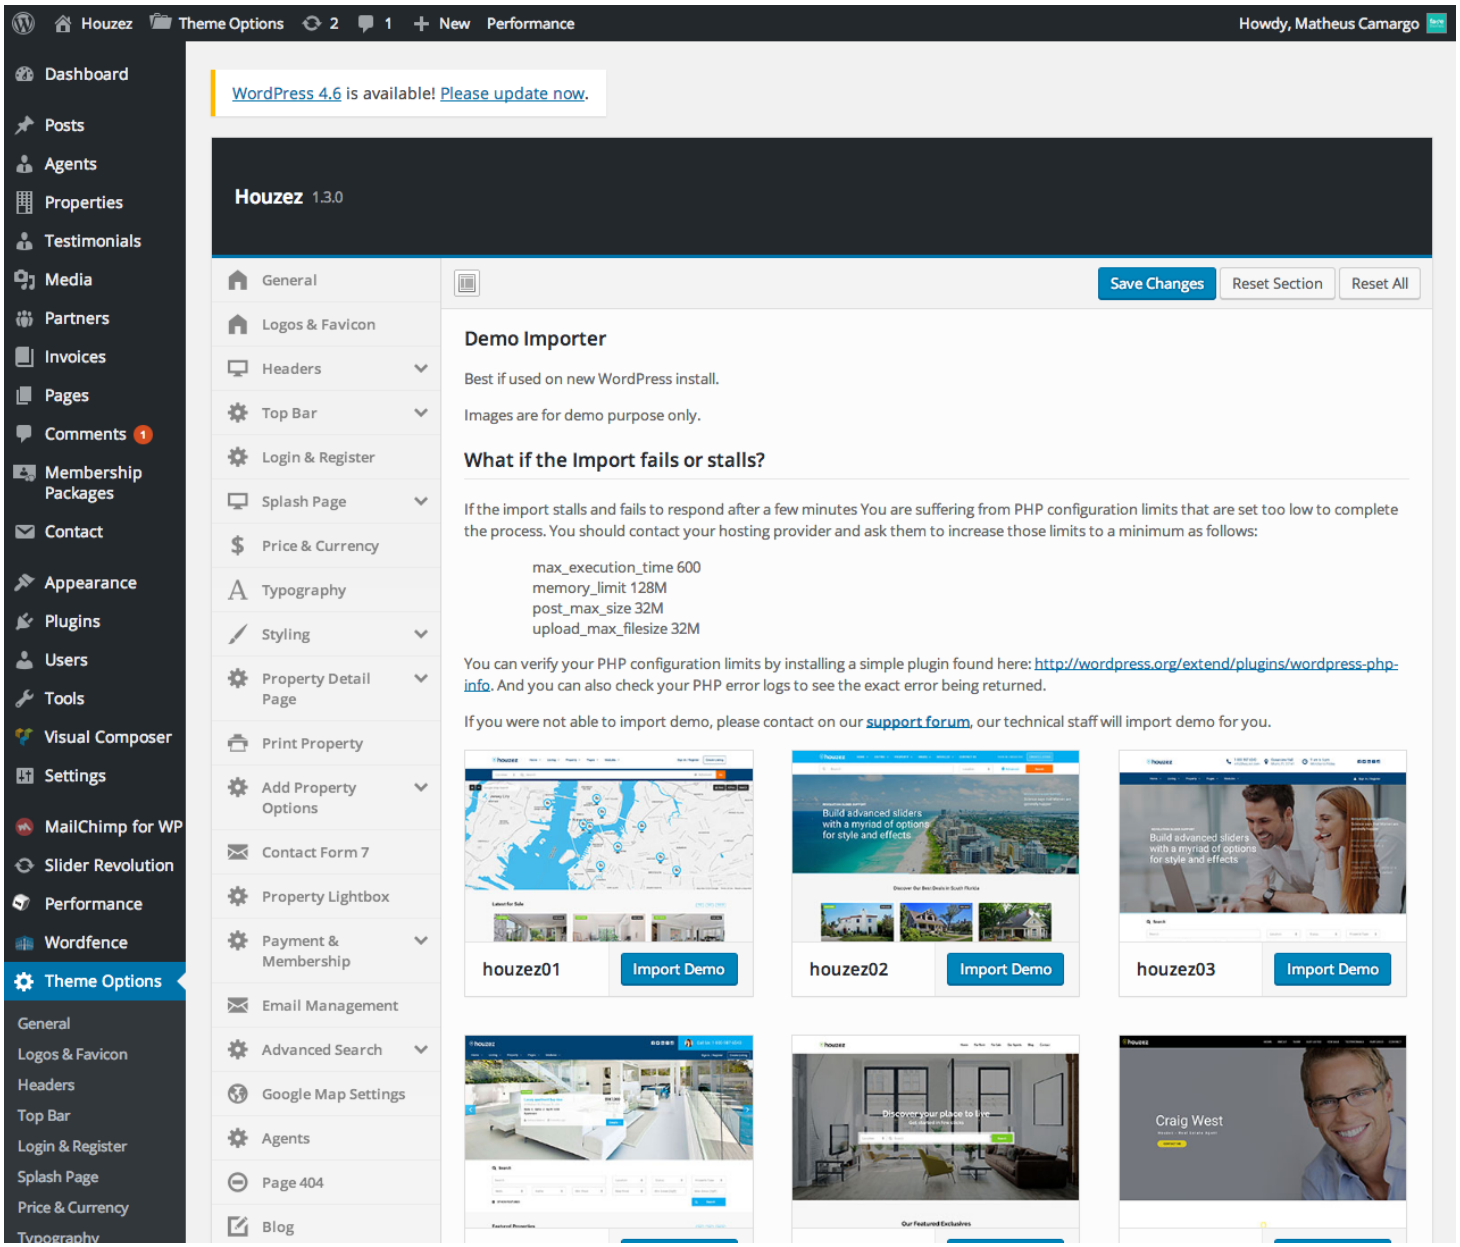


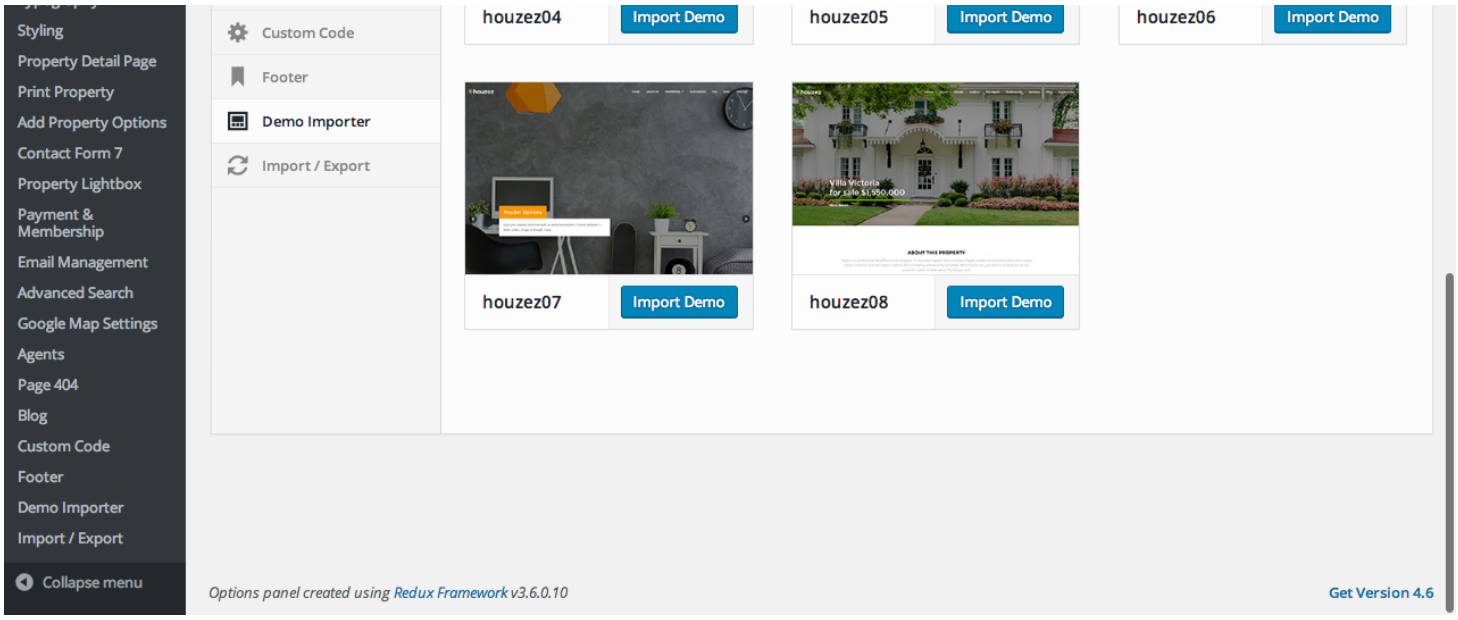
1. Navigate to **Theme Options > Footer**
2. **Footer Type:** select from Three Colums or Four Columns
3. **Copyright:** insert your copyright text
4. **Enable/Disable footer social media: Display or not social icons on footer**
5. **Facebook:** Enter Facebook profile url
6. **Twitter:** Enter Twitter profile url
7. **Google Plus:** Enter Google Plus profile url
8. **LinkedIn:** Enter LinkedInprofile url
9. **Instagram:** Enter Instagram profile url
10. Save Changes

58. Theme Options - Demo Importer

Houzez comes with the One Click Import feature so easily start with content in the right way. To install demo content proceed as follow.

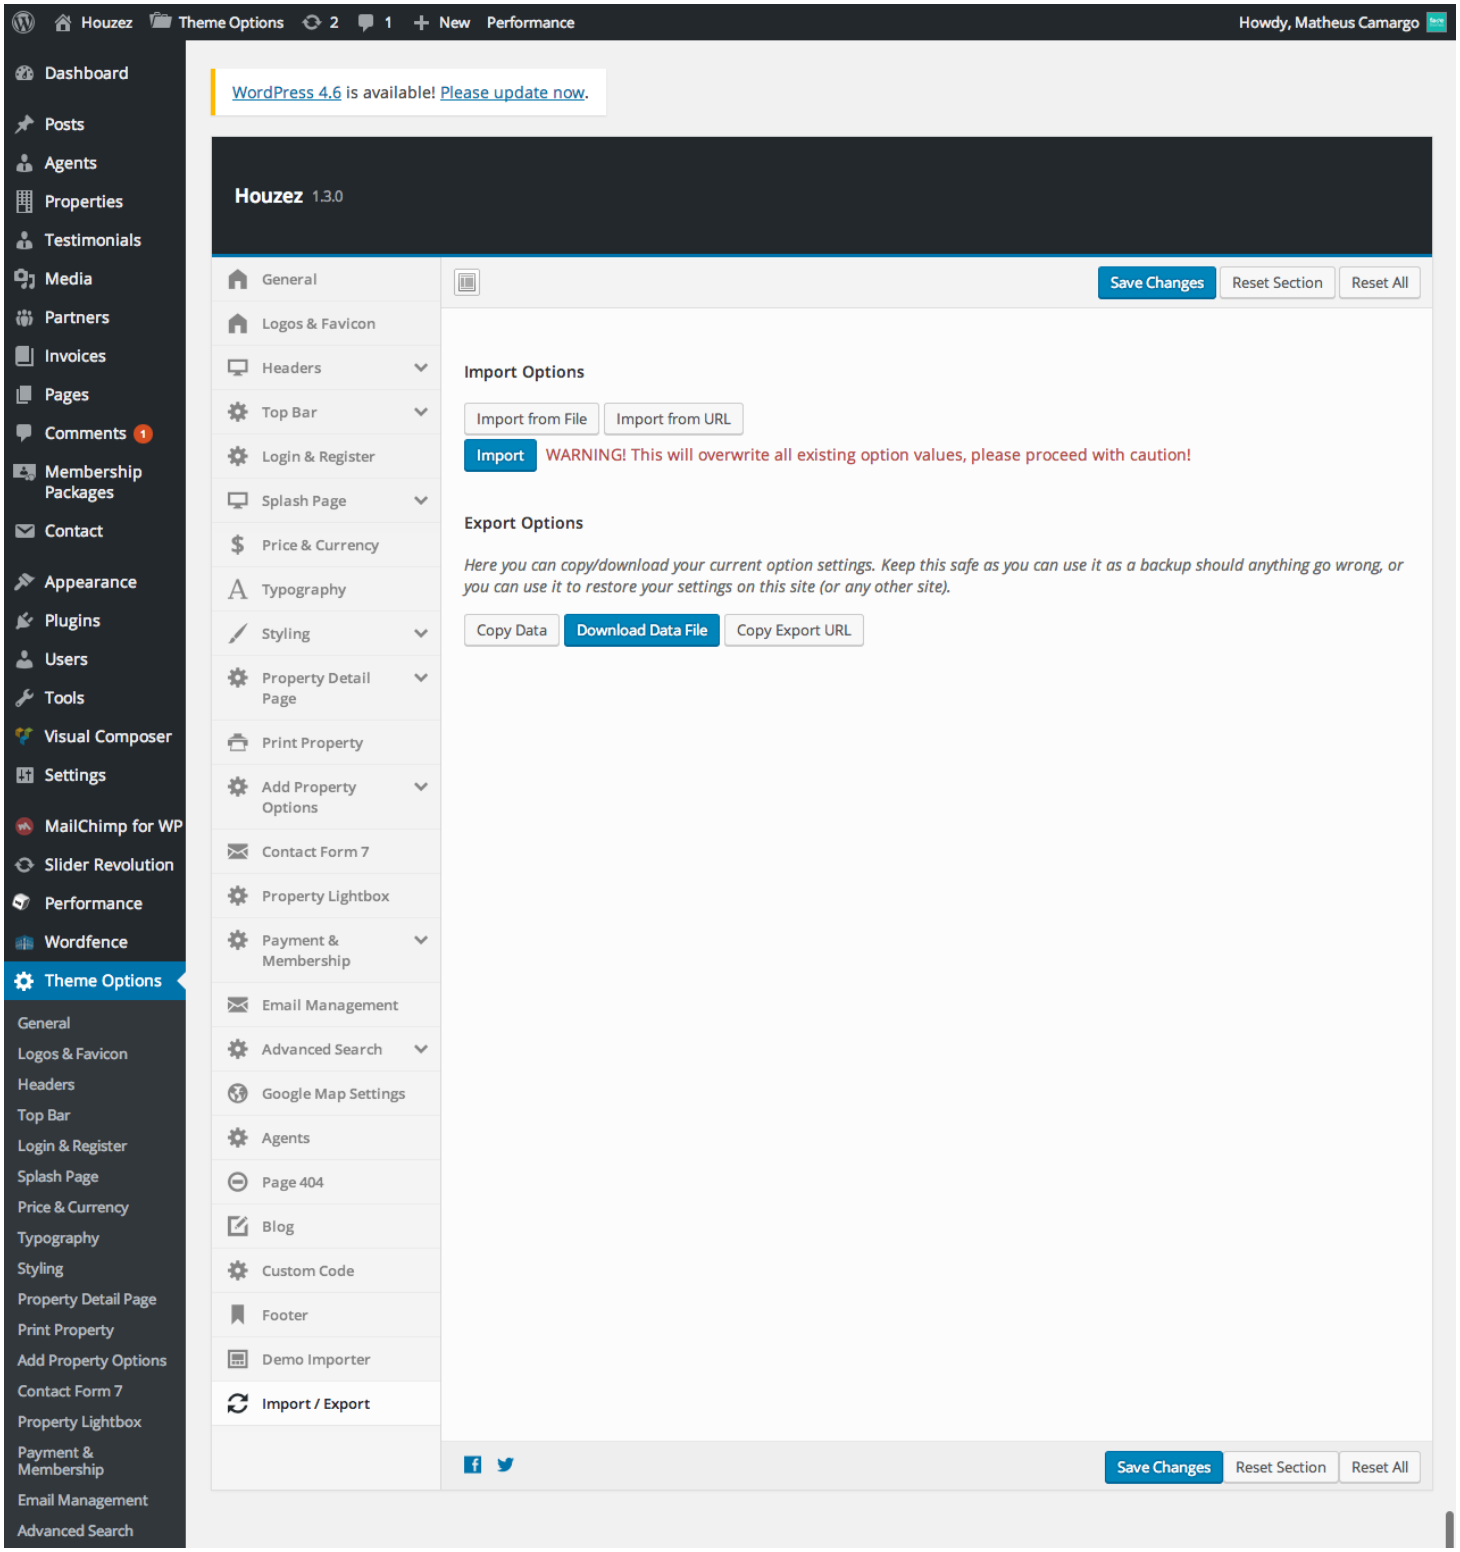
1. Navigate to **Theme Options > Demo Importer**
2. Select the demo you want to install by clicking on **Import Demo**

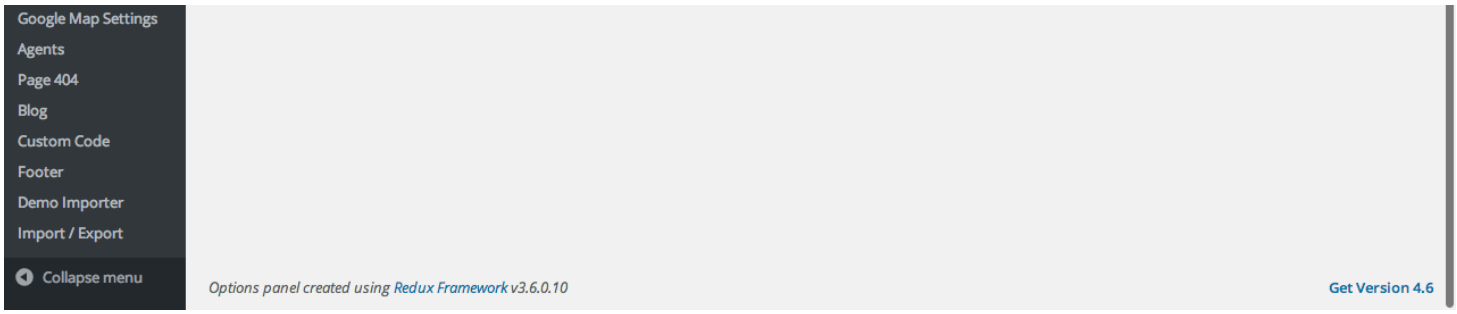




Please follow backend instruction (you’ll find in Demo Importer working area); If you were not able to import demo, please contact on our support forum, our technical staff will import demo for you.

59. Theme Options - Import / Export





1. Navigate to **Theme Options > Import / Export**
2. **Import Options**: you can choose to import from File or from URL. **WARNING! This will overwrite all existing option values, please proceed with caution!**
3. **Export Options:** Here you can copy/download your current option settings. **Keep this safe** as you can use it as a backup should anything go wrong, or you can use it to restore your settings on this site (or any other site). You can choose: Copy Data, Download Data File or Copy Export URL.

60. Google Maps - How to get a Google Maps API

To enable the Google Maps API access your admin panel and navigate to **Theme Options > Google Maps Settings.** We strongly encourage you to get an APIs Console key and post the code in Theme Options. You can get it from here.

This video shows step by step how to get a Google Maps API for Houzez and then setup inside the Theme option panel.

Houzez - How to get a Google Maps API

61. Google+ Login - How to get a Google+ API for login settings

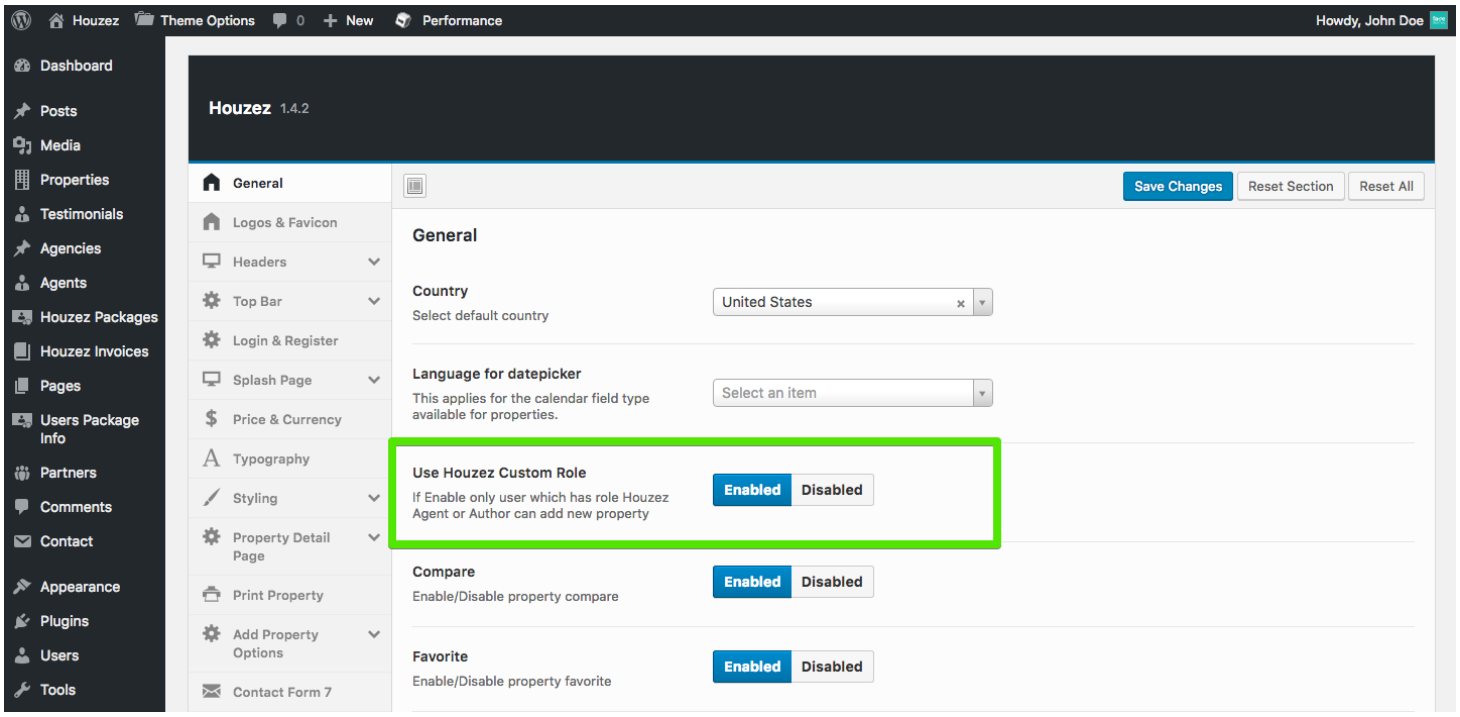
65. Stripe Setup - How to get a Stripe API

Stripe is a service that enables you to accept payments. To enable Stripe payments access your admin panel and navigate to **Theme Options > Payments & Membership > Stripe Settings.**

This video shows step by step how to get a Stripe API for Houzez and use it inside the Theme option panel.

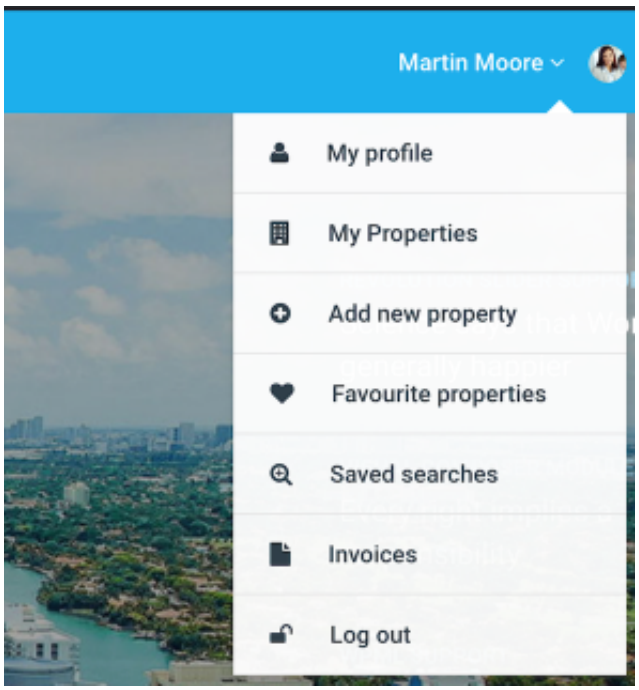
66. How User Roles Work?

Step 1: Enable user roles in Theme Options -> General.

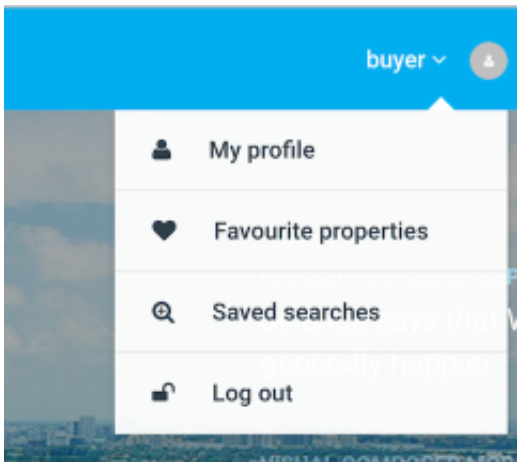


After enable user custom roles. Roles will have these access.

Houzez Agent: Can add properties, see his properties, can see invoices, make listings favorite and same searches



Houzez Buyer or simple user: Can only manage his profile, make listings favorite and same searches.



You can also enable user role on register user popup and profile page. In this way user will be able to change his role himself.

67. How To Translate Theme Using PO Language File?

Please follow these steps to translate a theme to your language.

Step 1

Install WordPress in your language OR Change the language in the admin settings screen.**Settings > General > Site Language**

Step 2

Download and install Poedit

Step 3

Find **houzez.pot** file in your theme’s “**languages**” directory.

Once found, Download the **houzez.pot** and rename it to your language code for example **fr_FR.po** for french. Complete lists of codes can be found at country codes and language codes.

Step 4

Start translating **fr_FR.po** in poedit software from English to French.

You do not need to translate everything, just look for the sentences or words that you really need to translate and leave the others as it is.

Step 5

Save the **fr_FR.po** file in poedit and it will create a new file named **fr_FR.mo** with in the same directory as **fr_FR.po** file in your computer.

Upload **fr_FR.po and fr_FR.mo** to the directory from where you have downloaded the **houzez.pot** in start.

That’s it. Your translation should work fine now.

68. How to Enable Geo Location?

Now you have the ability to see the geographic location of your website’s visitors. **Geo location** can be enable in **Theme Options > Google Map Settings.**

Important: Google geo location not work in google chrome without SSL (https://)
There are two solutions:

1. You should has **SSL domain**.
2. You can **enable IPINFO location for google chrome**, you just need to enable IPINFO Location in below screen, after you enable this, other browsers will show Google Geo Location but google chrome will show IPINFO location. Please note IPINFO Location is not as correct as Google.

69. How to add custom font to Theme Options

Hi,

Please follow those steps.

The prerequisites for adding the font to the Redux Core are:

- Have a font with the following formats > .eot .ttf .woff .woff2

I will the **"ProximaNova-Regular"** font as example.

Step 1

Copy the fonts in the formats above (.eot .ttf .woff .woff2) in the directory wp-content/themes/houzez/fonts

Step 2

Create a new file **fonts.css** located in the directory wp-content/themes/houzez/css and copy the following code in that file.

```
@font-face {
  font-family: 'ProximaNova-Regular';
  font-style: normal;
  font-weight: 500;
  src: url('../fonts/ProximaNova-Regular.eot'); /* IE9 Compat Modes */
  src: url('../fonts/ProximaNova-Regular.eot?#iefix') format('embedded-opentype'), /* IE6-IE
       url('../fonts/ProximaNova-Regular.woff2') format('woff2'), /* Super Modern Browsers *
       url('../fonts/ProximaNova-Regular.woff') format('woff'), /* Pretty Modern Browsers */
       url('../fonts/ProximaNova-Regular.ttf')  format('truetype'), /* Safari, Android, iOS
}
```

You need to change **"ProximaNova-Regular"** with the font name you want to install

Step 3

Edit the file **field_typography.php** located in the directory wp-content/plugins/houzez-theme-

functionality/extensions/redux/reduxCore/inc/fields/typography/

add this code after the line #39

```
'ProximaNova-Regular' => "ProximaNova-Regular",
```

Step 4

Find this line of code at #57

```
if ( isset( $this->field['all_styles'] ) && ! empty( $this->field['all_styles'] ) ) {
```

Just above copy this code

```
$this->field['ext-font-css'] = get_template_directory_uri() .'/css/fonts.css';
```

Step 5

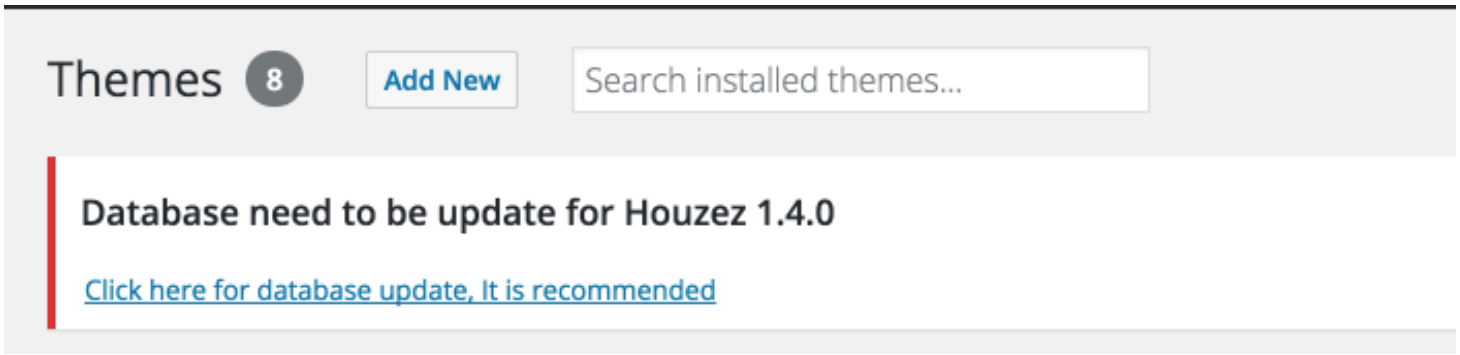
Edit the file **register-scripts.php** located in the directory wp-content/themes/houzez/inc/ and add the following before line #177

```
wp_enqueue_style( 'redux-external-fonts' );
wp_register_style( 'redux-external-fonts', get_template_directory_uri().'/css/fonts.css');
```

That's it.

70. How To Use Radius Search?

Step 1: If you are existing client then you need to update database to use radius search, after install v1.4.0 there will be link for database update.



Step 2: Enable radius search in Theme Options -> Advanced Search -> Search Fields

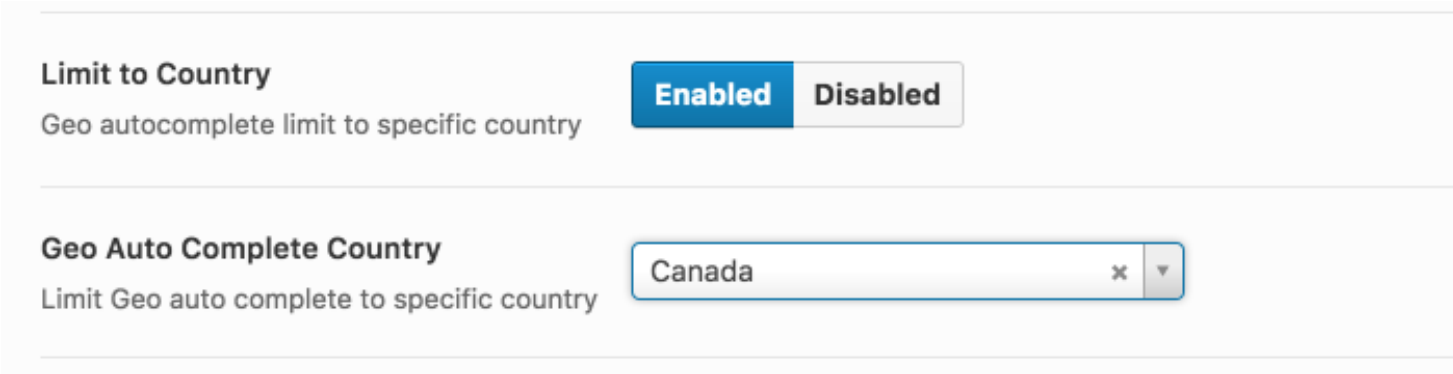
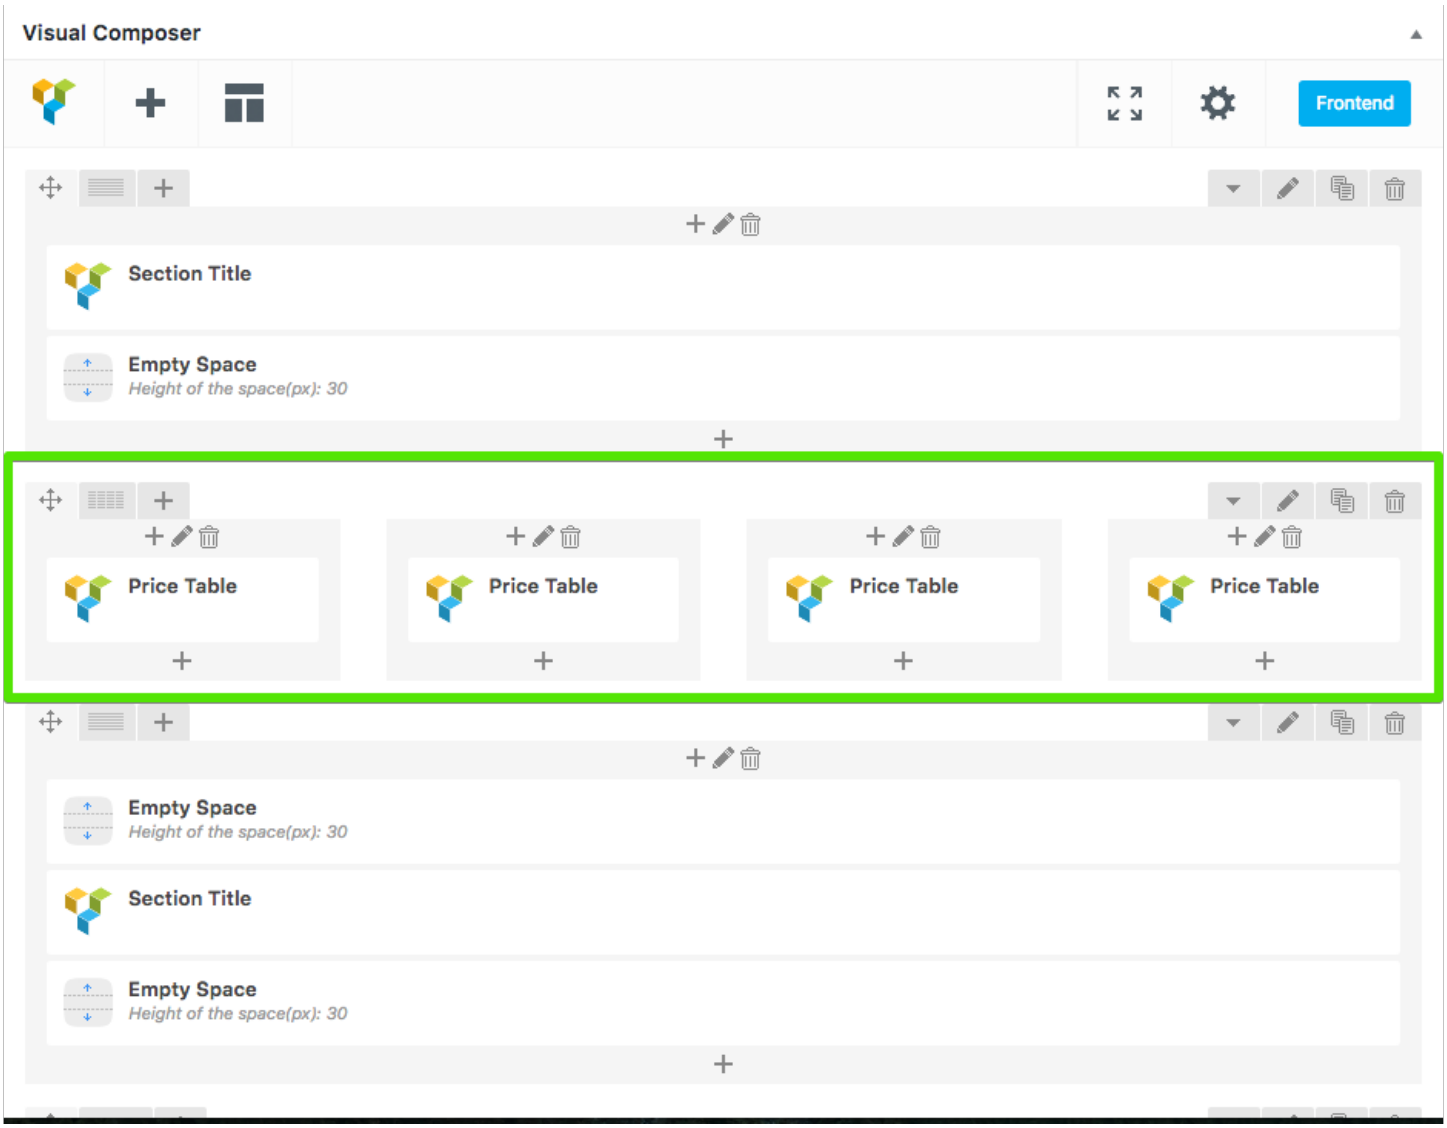
71. How To Set Geo Autocomplete To Specific Country?

You can set geo autocomplete to specific country for radius search and create listings add auto complete field under Theme Options -> Google Map Settings



72. How to Add Membership Packages of Page?

To add the Membership Packages in a page you can use the the Price Table module for Visual Composer by creating a design like the one you can see here below



This is generated by the following shorcode

```
[vc_row el_class="packages-no-padding"][vc_column width="1/4"][houzez-price-table package_id

 Time Period: 10 days
```

```
 Properties: 2
 Featured Listings: 2
[/houzez-price-table][/vc_column][vc_column width="1/4"][houzez-price-table package_id="1241

 Time Period: 10 days
 Properties: 2
 Featured Listings: 2
[/houzez-price-table][/vc_column][vc_column width="1/4"][houzez-price-table package_id="1240

 Time Period: 10 days
 Properties: 2
 Featured Listings: 2
[/houzez-price-table][/vc_column][vc_column width="1/4"][houzez-price-table package_id="1239

 Time Period: 10 days
 Properties: 2
 Featured Listings: 2
[/houzez-price-table][/vc_column][/vc_row]
```

73. How To Add Custom Fields in Submit Property Form?

Step 1:

You can find submit property form files in template-parts -> submit-property folder and edit property forms in edit-template-parts -> edit-property folder https://monosnap.com/file/f2KRqVZ0ErBD8CfplnvmWwL8JpAp2X

Step 2:

Edit any section in which you want to add new field, i am going to add in details section so i will edit details.php file and added new form field name **test_field** **https://monosnap.com/file/GsH7KvQhmewbEJOnLNKOuJUJNk8pPR**

Step 3:

houzez_submit_listing filter call, you can find this filter in framework -> functions -> property_functions.php file https://monosnap.com/file/rXkZXXix5J1DoXyoHUOrA1t0Z2OhF6 in this function you need to add this below line of code after line number 65

```
if( isset( $_POST['test_field'] ) && !empty( $_POST['test_field'] ) ) {
    update_post_meta( $prop_id, 'fave_test_field', sanitize_text_field( $_POST['test_field']
}
```

You have done new custom field. **Next step is to add this field when property edit.**

Step 4:

Edit details.php in template-parts -> edit-property folder and add this code https://monosnap.com/file/MhmRWKi4tUUmH4V22Omlek5WiVX1rp

Next show this field in property detail page.

Step 5:

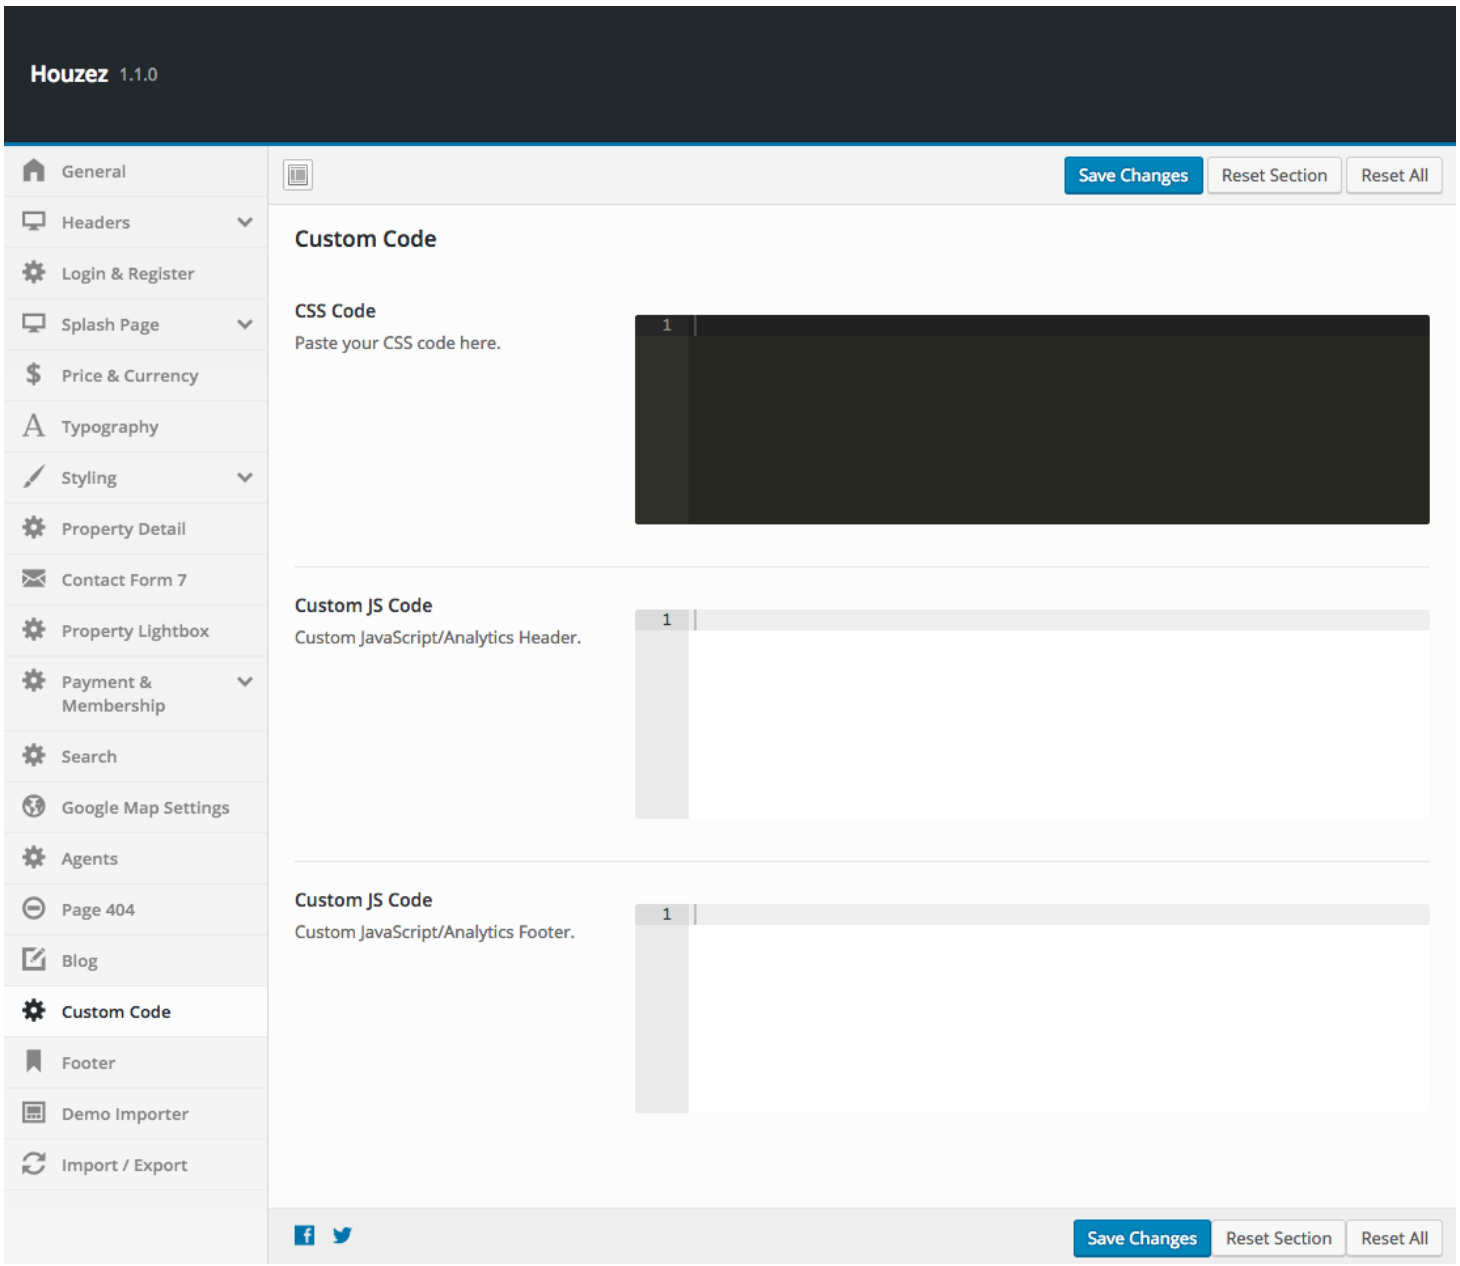
Edit property-details.php in property-details folder and add this code https://monosnap.com/file/R8kBwJpsltnyre2byAnr5POPGIRoTA

Next add custom field in backend form

Step 6:

Edit houzez-meta-boxes.php in framework -> metaboxes folder and add this code after line number 503 https://monosnap.com/file/Q0N9oGk4sckgCGo6295heDK99OI0B1

74. Customization



It's important not to touch the theme core files because every time we will update the theme, you will loose you changes.

There are two ways to customize the theme without changing it's core files. First one is use the **Custom Code** section, second one is to install the **Child Theme**

1. Custom Code

To style the theme with custom CSS or JS code, navigate to **Theme Options > Custom Code**. Add your custom code in the code box.

2. Child Theme

A WordPress child theme is a theme that inherits the functionality of another theme, called the parent theme. Child themes allow you to modify, or add to the functionality of that parent theme. A child theme is the safest and easiest way to modify an existing theme, whether you want to make a few tiny changes or extensive changes. Instead of modifying the theme files directly, you can create a child theme and override within.

3. Customization Services

We can professionally customize your existing WordPress theme based on Houzez to fit all your needs. For this kind of service you can contact us here: http://favethemes.com/contact/ selecting "I need theme customisation". Our team will be in touch with you to take care about everything of your project.

Once again, thank you so much for purchasing this theme. As we said at the beginning, We'd be glad to help you if you have any questions relating to this theme. No guarantees, but we'll do our best to assist.
